#### **Financial Instruments**

The Company's financial instruments are exposed to certain financial risks, including liquidity risk, and interest rate risk.

# Liquidity risk

Liquidity risk is the risk that the Company will not meet its financial obligations as they become due. Refer to Note 1 of its condensed consolidated interim financial statements for further details related to the ability of the Company to continue as a going concern.

The Company's approach to managing liquidity risk is to ensure that it will have sufficient liquidity to meet liabilities when due. As at September 30, 2024, the Company had a cash balance of \$2,948 (September 30, 2023 - \$927) to settle current liabilities of \$735,978 (September 30, 2023 - \$386,609). All of the Company's financial liabilities have contractual maturities of less than 30 days and are subject to normal trade terms.

Historically, the Company's sole source of funding has been the issuance of equity securities for cash, primarily through private placements. The Company's access to financing is always uncertain. There can be no assurance of continued access to significant equity funding. Liquidity risk is assessed as high.

#### Credit risk

Credit risk is the risk that a counterparty to a financial instrument will fail to discharge an obligation or commitment that it has entered into with the Company. The carrying amounts of financial assets best represent the maximum credit risk exposure at the reporting date.

The Company's cash is held by large Canadian financial institutions. The Company's loan receivable is exposed to significant credit losses. Credit risk on cash is assessed as low. Credit risk on the loan receivable is assessed as high.

#### Interest rate risk

Interest rate risk is the risk that the fair value or future cash flows of financial instruments will fluctuate because of changes in market interest rates. An immaterial amount of interest rate exposure exists in respect of cash balances on the condensed consolidated interim statement of financial position. As a result, the Company is not exposed to interest rate risk on its cash balances.

#### Foreign currency risk

Foreign currency exchange risk is the risk that the fair value or future cash flows will fluctuate as a result of changes in foreign exchange rates. Since the Company's reporting currency is Canadian dollars and the Company and its subsidiaries have significant operations in Australia, the Company is exposed to foreign currency fluctuations on its reported amounts of assets and liabilities. This risk is not considered significant as most financial assets and liabilities are maintained in Canadian dollars. The Company's loan receivable is denominated in US dollars. If the Canadian dollar changes by 10% against the US dollar, it would result in a \$Nil (September 30, 2023 - \$Nil) change in loss and comprehensive loss.

# Fair value of Financial Instruments

The Company's financial instruments measured at fair value consist of cash, restricted cash, loan receivable and accounts payable. The carrying values of cash, restricted cash and accounts payable approximate their fair values due to their short-term nature.

Financial instruments measured at fair value are classified into one of three levels in the fair value hierarchy according to the relative reliability of the inputs used to estimate the fair values. The three levels of fair value hierarchy are:

- Level 1 unadjusted quoted prices in active markets for identical assets or liabilities;
- Level 2 inputs other than quoted prices that are observable for the assets or liabilities either directly or indirectly; and
- Level 3 inputs that are not based on observable market data.

Cash and restricted cash are classified as Level 1.

# **Capital Management**

The Company manages its capital structure and makes adjustments to it, based on the funds available to the Company, in order to support the acquisition, exploration and development of mineral properties. The Board of Directors does not establish quantitative return on capital criteria for management but rather relies on the expertise of the Company's management to sustain the future development of the business.

The capital structure of the Company consists of shareholder's equity, comprising issued capital and deficit. The Company is not exposed to any externally imposed requirements. Management reviews its capital management approach on an ongoing basis and believes that this approach, given the relative size of the Company, is reasonable.

# **Risks and Uncertainties**

The Company has limited financial resources and there is no assurance that additional funding will be available to it for further development of its projects or to fulfil its obligations under applicable agreements. There can be no assurance that the Company will be able to obtain adequate financing in the future or that the terms of such financing will be favourable. Failure to obtain such additional financing could result in

delay or indefinite postponement of the Company's intended business operations with the possible dilution or loss of such interest. Further, revenues, financings and profits, if any, will depend upon various factors, including the success, if any, of intended business operations. There is no assurance that the Company can operate profitably or that it will successfully implement its plans.

The Company is in the development stage and has no operating earnings. The likelihood of success of the Company must be considered in light of the problems, expenses and difficulties, complications and delays frequently encountered in connection with the establishment of any business.
