

# J4 Ventures Resources Corp. (Formerly J4 Ventures Inc.) Completes Drone Magnetics Survey at Arthur Lake

Vancouver, British Columbia--(Newsfile Corp. - April 20, 2026) - J4 Ventures Resources Corp. (TSXV: JJJJ) ("J4" or the "Company"), is pleased to announce the completion of a drone magnetics survey at its 543ha Arthur Lake property, 54 kms southwest of Vanderhoof, BC. The Company completed a 127 line km drone magnetics survey over the property at a 50m line spacing to better understand the geology and potential structures below the glacial cover, as well as the Little Bear - Big Bear corridor. Pioneer Exploration Consultants Ltd. completed the survey.

"The magnetics survey has shown the granitic intrusion to be a strong exploration target," commented Jeremy Poirier, chief executive officer. "We plan to reinterpret the historic exploration including a 2021 Induced Polarization survey in light of the new magnetic data."

**Figure 1. Total Magnetic Intensity (Reduced to Pole)**

The magnetics appear to highlight the original granitic plug, which recent mapping and the magnetics indicate is actually more of a dyke. The magnetics suggest a possible bend in trend from NW to WNW, where the Little Bear and Big Bear showings and copper mineralization lie.

**Arthur Lake Property Highlights:**

- Historic rock grab sampling returned results ranging from 8 to 24,800 ppm Cu, with 10 samples assaying in excess of 2,200 ppm Cu, largely at the Little Bear Showing.
- Subsequent soil sampling identified three copper or copper/multi-element soil anomalies:
- 2025 J4 rock and soil sampling and pack sack drilling at Little Bear, returned grab samples of 7.2% copper and 11.2 ppm silver with pack sack drill result of 0.43% copper and 11.8 ppm silver.
- Grab sampling at the related Big Bear showing 350m to the WNW returned highlights of 0.68% copper and pack sack drill results of 0.23% copper over 1.6m.
