

## Wallbridge Expands Fenelon Gold Mineralization in Area 51 at Depth and South of Ripley

Toronto, Ontario – June 06, 2023 – Wallbridge Mining Company Limited (TSX:WM, OTCQX:WLBMF) (“Wallbridge” or the “Company”) today announced that its 2023 exploration drill program has extended the gold mineralization at its 100% owned Fenelon Gold project (“Fenelon”) at depth in Area 51 and to the south of the Ripley zone.

Attila Péntek, Wallbridge’s Vice President, Exploration, commented:

*“The ongoing drilling campaign at Fenelon continues to return impressive results, both discovering new gold-bearing areas on the property (see Press Release from May 8, 2023) and continuing to expand the known deposit as highlighted today. Significantly, today’s results expand the Area 51 system 80 metres from the nearest intersection in the central part of the deposit at depth, while new results in the Ripley zone have now expanded the known footprint of gold-bearing Jeremie Diorite to over three kilometres north-south. Our exploration program is consistently growing the overall mineralized footprint and highlighting the district-scale potential of the Fenelon gold system.*”

*Over the remainder of the year, our exploration activities will continue to focus on further delineating the potential of our Detour-Fenelon land package. In parallel, we expect to complete a preliminary economic assessment for the Fenelon deposit this month.”*

### Composite Highlights

- FA-23-543 intersected high-grade gold mineralization in the Area 51 system down to 940 metres below surface including:
  - **18.26 g/t Au over 2.70 metres**, including  
**38.63 g/t Au over 1.20 metres**,
  - **14.16 g/t Au over 2.50 metres**, and
  - **20.95 g/t Au over 0.50 metre**;

### Geological Highlights

A transect of four holes were drilled across the Sunday Lake Deformation Zone (“**SLDZ**”) immediately south of the Ripley zone, a new satellite zone of the Fenelon mineral resource (see February 28, 2023, press release). These holes intersected several intervals of intense deformation and strong hydrothermal alteration over hundreds of meters that is interpreted to represent the main deformation corridor of the SLDZ. This structure is in contact with the Timiskaming-type conglomerate rocks identified on the property last year, which in the southern Abitibi have a strong spatial association with gold deposits.

In addition to outlining the SLDZ corridor, results indicate the folding of the gold-bearing Jeremie Diorite immediately to the south of the Ripley Zone, with several gold mineralized intervals present (see Table 1 below). The interpreted folding of the Jeremie Diorite opens up new directions to the south and east for follow-up drill testing of this favorable gold-hosting environment.

## **Detour-Fenelon Gold Trend Exploration Progress**

Currently, the Company has three drill rigs operating on its Detour-Fenelon Gold Trend property: two at its Martiniere gold project and one that is in the process of being mobilized from Fenelon to Grasset East to test favorable target areas on this eastern, unexplored part of the land package.

Wallbridge has completed over 13,000 metres of drilling at Fenelon and over 10,000 meters at Martiniere as part of its 2023 exploration program. Assay results are being released here for six drill holes from Fenelon.

In addition to the drilling campaign, other grassroots exploration programs are underway to continue developing the pipeline of regional targets. In the first quarter of this year, high-resolution airborne magnetic surveys were completed over a group of properties, including Martiniere and Casault, and a sonic, drill-for-till orientation program was completed at Casault. Field work is also currently underway on the Harri property, which lies between the Company's two flagship projects, Fenelon and Martiniere.

## **Assay QA/QC and Qualified Persons**

Drill core samples from the ongoing drill program at Fenelon are cut and bagged either on-site or by contractors and transported to SGS Canada Inc. for analysis. Samples, including standards and blanks for quality assurance and quality control, were prepared and analyzed at the laboratories. Samples are crushed to 90% less than 2mm. A 1kg riffle split is pulverized to 85% passing 75 microns. 50g samples are analyzed by fire assay and AAS or ICP. Samples >10g/t Au are automatically analyzed by fire assay with gravimetric finish or screen metallic analysis. To test for coarse free gold and additional quality assurance and quality control, Wallbridge requests screen metallic analysis for samples containing visible gold. These and future assay results may vary from time to time due to re-analysis for quality assurance and quality control.

The Qualified Person responsible for the technical content of this press release is Christopher Kelly, M.Sc., P.Geo., Senior Geologist of Wallbridge.

<b>Ripley Targets</b>							
FA-23-542	No Significant Mineralization						
FA-23-545	No Significant Mineralization						
FA-23-547	404.00	405.50	1.50	4.17	4.17		Ripley
FA-23-547	475.50	477.00	1.50	5.10	5.10		Ripley
FA-23-547	742.00	743.50	1.50	3.47	3.47		Ripley
FA-23-549	No Significant Mineralization						

*Note: True widths are estimated to be 50-80% of the reported core length intervals*

- <sup>(1)</sup> Table includes only assay received since the latest press release dated May 8, 2023
- <sup>(2)</sup> Au cut at: 110 g/t for the Tabasco/Contact/Cayenne Zones; 75 g/t Au for the Area 51 zones
- <sup>(3)</sup> Intervals containing visible gold (“VG”)
- <sup>(4)</sup> Metal factor of at least 5 g/t\*m and minimum weighted average composite grade of 1.5 g/t Au, matching the underground resource cut-off grade used in the 2023 MRE

All figures and a table with drill hole information of recently completed holes are posted on the Company’s website under “Current Program” at <https://wallbridgeminig.com/our-projects/fenelon-gold/>.

### About Wallbridge Mining

Wallbridge is focused on creating value through the exploration and sustainable development of gold projects along the Detour-Fenelon Gold Trend while respecting the environment and communities where it operates.

Wallbridge’s flagship project, Fenelon Gold (“**Fenelon**”), is located on the highly prospective Detour-Fenelon Gold Trend Property in Québec’s Northern Abitibi region. An updated mineral resource estimate completed in January 2023 yielded significantly improved grades and additional ounces at the 100%-owned Fenelon and Martiniere projects, incorporating a combined 3.05 million ounces of indicated gold resources and 2.35 million ounces of inferred gold resources.

Fenelon and Martiniere are located within an 830 km<sup>2</sup> exploration land package controlled by Wallbridge. The Company believes that these two deposits have good potential for economic development, especially given their proximity to existing hydro-electric power and transportation infrastructure. In addition, Wallbridge believes that the extensive land package is extremely prospective for the discovery of additional gold deposits.

Wallbridge also holds a 19.9% interest in the common shares of Archer Exploration Corp. (“**Archer**”) as a result of the sale of the Company’s portfolio of nickel assets in Ontario and Québec in November of 2022.

Wallbridge will continue to focus on its core Detour-Fenelon Gold Trend Property while enabling shareholders to participate in the potential economic upside in Archer.

### **Cautionary Note Regarding Forward-Looking Information**

*This press release contains forward-looking statements or information (collectively, "FLI") within the meaning of applicable Canadian securities legislation. FLI is based on expectations, estimates, projections, and interpretations as at the date of this press release.*

*All statements, other than statements of historical fact, included herein are FLI that involve various risks, assumptions, estimates and uncertainties. Generally, FLI can be identified by the use of statements that include words such as "seeks", "believes", "anticipates", "plans", "continues", "budget", "scheduled", "estimates", "expects", "forecasts", "intends", "projects", "predicts", "proposes", "potential", "targets" and variations of such words and phrases, or by statements that certain actions, events or results "may", "will", "could", "would", "should" or "might", "be taken", "occur" or "be achieved."*

*FLI herein includes but is not limited to: statements regarding the potential future performance of Archer common shares; future drill results; the Company's ability to convert inferred resources into measured and indicated resources; environmental matters; stakeholder engagement and relationships; parameters and methods used to estimate the MRE's at the Fenelon Gold (defined below) and Martiniere (defined below) properties (collectively the "Deposits"); the prospects, if any, of the Deposits; future drilling at the Deposits; and the significance of historic exploration activities and results.*

*FLI is designed to help you understand management's current views of its near- and longer-term prospects, and it may not be appropriate for other purposes. FLI by their nature are based on assumptions and involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance, or achievements of the Company to be materially different from any future results, performance or achievements expressed or implied by such FLI. Although the FLI contained in this press release is based upon what management believes, or believed at the time, to be reasonable assumptions, the Company cannot assure shareholders and prospective purchasers of securities of the Company that actual results will be consistent with such FLI, as there may be other factors that cause results not to be as anticipated, estimated or intended, and neither the Company nor any other person assumes responsibility for the accuracy and completeness of any such FLI. Except as required by law, the Company does not undertake, and assumes no obligation, to update or revise any such FLI contained herein to reflect new events or circumstances. Unless otherwise noted, this press release has been prepared based on information available as of the date of this press release. Accordingly, you should not place undue reliance on the FLI, or information contained herein.*

*Furthermore, should one or more of the risks, uncertainties or other factors materialize, or should underlying assumptions prove incorrect, actual results may vary materially from those described in FLI.*

*Assumptions upon which FLI is based, without limitation, include: the results of exploration activities, the Company's financial position and general economic conditions, the ability of exploration activities to accurately predict mineralization; the accuracy of geological modelling; the ability of the Company to complete further exploration activities; the legitimacy of title and property interests in the Deposits; the accuracy of key assumptions, parameters or methods used to estimate the MREs; the ability of the Company to obtain required approvals; the results of exploration activities; the evolution of the global economic climate; metal prices; environmental expectations; community and non-governmental actions; and any impacts of the COVID-19 pandemic on the Deposits, the Company's financial position, the Company's ability to secure required funding, or operations. In addition to the MD&A, risks and uncertainties about Wallbridge's business are discussed in the disclosure materials filed with the securities regulatory authorities in Canada, which are available at [www.sedar.com](http://www.sedar.com).*

### **Information Concerning Estimates of Mineral Resources**

*The disclosure relating to the Deposits and MRE's in this press release and referred to herein was prepared in accordance with NI 43-101 which differs from the requirements of the U.S. Securities and Exchange Commission (the "SEC"). The terms "measured mineral resource", "indicated mineral resource" and "inferred mineral resource" used in this press release are in reference to the mining terms defined in the Canadian Institute of Mining, Metallurgy and Petroleum Standards (the "CIM Definition Standards"), which definitions have been adopted by NI 43-101. Accordingly, information contained in this press release providing*

*descriptions of our mineral deposits in accordance with NI 43-101 may not be comparable to similar information made public by other U.S. companies subject to the United States federal securities laws and the rules and regulations thereunder.*

*Investors are cautioned not to assume that any part or all mineral resources will ever be converted into reserves. Pursuant to CIM Definition Standards, "inferred mineral resources" are that part of a mineral resource for which quantity and grade or quality are estimated on the basis of limited geological evidence and sampling. Such geological evidence is sufficient to imply but not verify geological and grade or quality continuity. An inferred mineral resource has a lower level of confidence than that applying to an indicated mineral resource and must not be converted to a mineral reserve. However, it is reasonably expected that the majority of inferred mineral resources could be upgraded to indicated mineral resources with continued exploration. Under Canadian rules, estimates of inferred mineral resources may not form the basis of feasibility or pre-feasibility studies, except in rare cases. Investors are cautioned not to assume that all or any part of an inferred mineral resource is economically or legally mineable. Disclosure of "contained ounces" in a resource is permitted disclosure under Canadian regulations; however, the SEC normally only permits issuers to report mineralization that does not constitute "reserves" by SEC standards as in place tonnage and grade without reference to unit measures.*

*Investors are cautioned that while terms, are substantially similar to CIM Definition Standards, there are differences in the definitions and standards under subpart 1300 of Regulation S-K of the United States Securities Act of 1933, as amended (the "**SEC Modernization Rules**"), with compliance required for the first fiscal year beginning on or after January 1, 2021. The SEC Modernization Rules replace the historical property disclosure requirements included in SEC Industry Guide 7. As a result of the adoption of the SEC Modernization Rules, the SEC now recognizes estimates of "measured mineral resources," "indicated mineral resources" and "inferred mineral resources". Information regarding mineral resources contained or referenced in this press release may not be comparable to similar information made public by companies that report according to U.S. standards. While the SEC Modernization Rules are purported to be "substantially similar" to the CIM Definition Standards, readers are cautioned that there are differences between the SEC Modernization Rules and the CIM Definitions Standards. Accordingly, there is no assurance any mineral resources that the Company may report as "measured mineral resources", "indicated mineral resources" and "inferred mineral resources" under NI 43-101 would be the same had the Company prepared the resource estimates under the standards adopted under the SEC Modernization Rules.*
