ADDITIONAL INFORMATION	89

The information in this Annual Information Form (“AIF”) is given as of December 31, 2022 unless otherwise indicated. All dollar amounts set forth in this AIF are in Canadian dollars unless otherwise indicated. Capitalized terms and industry terms used herein without definition have the respective meanings set forth in the Glossary.

GLOSSARY

In this AIF, unless the context otherwise requires, the following terms have the indicated meanings. A reference to an agreement means the agreement as amended, supplemented or restated from time to time.

“**2022 Financial Statements**” means the Corporation’s audited annual consolidated financial statements as at and for the year ended December 31, 2022, copies of which are available on the Corporation’s SEDAR profile at www.sedar.com;

“**ABCA**” means the *Business Corporations Act* (Alberta), as amended from time to time, and the regulations thereunder;

“**acid gas**” means H₂S or CO₂ or a combination of H₂S and CO₂ which are referred to as acid gases because they form acids or acidic solutions in the presence of water;

“**acid gas injection**” refers to the injection of acid gas into underground geological formations;

“**ADT**” means the Corporation’s Alberta Diluent Terminal;

“**AEF**” means the Corporation’s Alberta EnviroFuels facility;

“**AER**” means the Alberta Energy Regulator;

“**AIF**” means this Annual Information Form;

“**Board of Directors**” or “**Board**” means the board of directors of the Corporation;

“**butane**” means an NGL, the chemical formula of which is C₄H₁₀, used primarily in crude oil and gasoline blending or in the production of iso-octane;

“**CH₄**” means methane;

“**CO₂**” means carbon dioxide;

“**CO₂e**” means carbon dioxide equivalent;

“**Common Shares**” means the common shares of the Corporation;

“**Computershare**” means Computershare Trust Company of Canada;

“**condensate**” means a mixture of hydrocarbons consisting primarily of pentanes and heavier liquids usually produced with or extracted from raw gas;

“**Conduct Policies**” has the meaning set forth under “Environmental, Social and Governance Matters – Ethical Business Conduct”;

“**Corporation**” means Keyera Corp., a corporation formed under the ABCA;

“**Credit Facilities**” has the meaning set forth under “Capital Structure of the Corporation – Credit Facilities”;

“**CUSMA**” means the *Canada-United States-Mexico Agreement* between Canada, the U.S. and Mexico;

“**DBRS**” means DBRS Morningstar;

“**dilbit**” means bitumen that is blended with a diluent, such as condensate, in order to reduce viscosity and density of the bitumen for pipeline transportation;

“**diluent**” means a lower density fluid that is blended with heavy oil or bitumen in order to reduce viscosity and density for pipeline transportation (condensate is a commonly used diluent for pipeline transportation of heavy oil or bitumen);

“**distributable cash flow**” means the cash flow available for distribution to Shareholders as dividends as described under “Dividends”;

“**ESG**” means environmental, social and governance, the three central factors in measuring the sustainability and societal impact of a company;

“**ethane**” means an NGL, the chemical formula of which is C₂H₆, used primarily as a feedstock to the petrochemical industry and in enhanced oil recovery projects;

“**First Preferred Shares**” means the first preferred shares of the Corporation, as more particularly described under “Capital Structure of the Corporation – Preferred Shares”;

“**First Supplemental Note Indenture**” means the first supplemental note indenture issued under the Note Indenture dated June 13, 2019;

“**GHG**” means greenhouse gas;

“**GSC**” has the meaning set forth under “Environmental, Social and Governance Matters – ESG Governance”;

“**gas products**” means NGLs, sulphur and any other commercial substances that may be extracted from raw gas;

“**HSE**” has the meaning set forth under “Environmental, Social and Governance Matters – ESG Governance”;

“**H₂S**” means hydrogen sulphide;

“**hydrocarbons**” means organic compounds containing a mixture of carbon and hydrogen;

“**inlet separation**” means the initial stage of processing within a natural gas processing plant where the incoming raw gas stream enters a vessel and any free liquids such as water and NGLs are removed from the gas stream before it is further processed;

“**iso-octane**” is a low vapour pressure, high octane, gasoline blending component;

“**KAPS**” is a NGL and condensate pipeline system which is currently under construction and will, once completed, transport Montney and Duvernay production from northwestern Alberta to Keyera’s fractionation assets and condensate system in Fort Saskatchewan, Alberta;

“**KEI**” means Keyera Energy Inc., a corporation formed under the laws of the State of Delaware and a wholly-owned subsidiary of the Corporation;

“**Keyera**” means the Corporation and, unless the context requires otherwise, includes its subsidiaries;

“Keyera Medium Term Notes” means, collectively, the Medium Term Notes, Series 1, the Medium Term Notes, Series 2 and the Medium Term Notes, Series 3;

“Keyera Subordinated Hybrid Notes” means, collectively the Subordinated Hybrid Notes, Series 1 and the Subordinated Hybrid Notes, Series 2;

“KFS” means the Keyera Fort Saskatchewan facilities described under “Business of Keyera – Liquids Infrastructure Business Segment”;

“lean oil recovery” is an NGL recovery process that utilizes a light oil in contact with incoming raw gas to absorb NGLs from the raw gas stream and to meet raw gas specifications;

“LIBOR” means London Inter-Bank Offered Rate;

“license capacity” means the maximum permissible raw gas inlet volume for a gas plant as determined by the plant license granted by the AER or the British Columbia Oil and Gas Commission;

“Medium Term Notes, Series 1” means the \$400 million aggregate principal amount of medium term notes of Keyera issued June 21, 2018 pursuant to the Note Indenture;

“Medium Term Notes, Series 2” means the \$400 million aggregate principal amount of medium term notes of Keyera issued May 29, 2020 pursuant to the Note Indenture;

“Medium Term Notes, Series 3” means the \$400 million aggregate principal amount of medium term notes of Keyera issued March 28, 2022 pursuant to the Note Indenture;

“NGL” or **“NGLs”** means natural gas liquids, consisting of any one of ethane, propane, butane, condensate and pentanes, or any combination thereof;

“Note Agreements” has the meaning set forth under “Capital Structure of the Corporation – Senior Unsecured Notes”;

“Note Indenture” means the trust indenture dated June 21, 2018 among the Corporation, certain of its subsidiaries and Computershare providing for the issuance of notes;

“NOx” means nitrous oxide;

“OEMS” means the Corporation’s Operational Excellence Management System as further described in “Environmental, Social and Governance Matters – Environmental Programs”;

“operating margin” means operating revenues less operating expenses and general and administrative expenses associated with the Marketing segment, and does not include the elimination of inter-segment transactions. For additional information, see the 2022 Financial Statements;

“Ovintiv” means Ovintiv Inc.;

“Partnership” means Keyera Partnership, a general partnership organized under the laws of the Province of Alberta, all of the interests of which are directly and indirectly owned by the Corporation;

“pentane” means a hydrocarbon, generally a liquid at atmospheric conditions, the chemical formula of which is C_5H_{12} ;

“Preferred Shares” means the First Preferred Shares and Second Preferred Shares or any one of them;

“Premium DRIP” means the Premium Dividend™ and Dividend Reinvestment Plan adopted by the Corporation, as further described in “Dividends – Premium DRIP”;

“propane” means an NGL, the chemical formula of which is C₃H₈, used for heating, crop drying, motor fuel and as a feedstock for the petrochemical industry in the manufacture of ethylene and propylene;

“raw gas” means natural gas before it has been subjected to any processing that may be required for it to become suitable for sale;

“RBOB” means reformulated gasoline blendstock for oxygenate blending;

“refrigeration” is an NGL recovery process that utilizes a refrigerant as a means to cool incoming raw gas in order to extract NGLs from the raw gas stream;

“Rights Plan” means the shareholder rights plan adopted by the Corporation as more particularly described under “Capital Structure of the Corporation – Shareholder Rights Plan”;

“Rimbey LP” means Rimbey Pipeline Limited Partnership, a limited partnership formed under the laws of the Province of Manitoba, all of the interests of which are directly and indirectly owned by the Corporation;

“S&P” means S&P Global Ratings, a division of The McGraw-Hill Companies;

“sales gas” means saleable natural gas after it has been treated in a natural gas processing facility to remove water vapour, inert gases, CO₂, H₂S and NGLs and is comprised primarily of methane with small amounts of ethane and other NGLs;

“Second Preferred Shares” means second class of preferred shares of the Corporation, as more particularly described under “Capital Structure of the Corporation – Preferred Shares”;

“Second Supplemental Note Indenture” means the second supplemental note indenture issued under the Note Indenture dated March 10, 2021;

“Senior Unsecured Notes” has the meaning set forth under “Capital Structure of the Corporation – Senior Unsecured Notes”;

“Shareholder” means a holder of Common Shares;

“Shell Canada” means Shell Canada Limited;

“sour gas” means natural gas that contains an amount of H₂S in excess of the content permitted in gas to be transported on sales gas pipelines, or which the AER considers to be sour gas;

“specification NGLs” means saleable ethane, propane, butane or condensate that meet the specifications for those products established by industry associations;

“Subordinated Hybrid Notes, Series 1” means the \$600 million of fixed-to-floating rate subordinated notes series 2019-A of the Corporation issued on June 13, 2019 pursuant to the First Supplemental Note Indenture;

“Subordinated Hybrid Notes, Series 2” means the \$350 million of fixed-to-fixed rate subordinated notes series 2021-A of the Corporation issued on March 10, 2021 pursuant to the Second Supplemental Note Indenture;

“subsidiary” means, in relation to any person or entity, any corporation, partnership, trust, joint venture, association or other entity of which more than 50% of the total voting power of shares or units of ownership

or beneficial interest entitled to vote in the election of directors (or members of a comparable governing body) is owned or controlled, directly or indirectly, by such person or entity;

“**sulphur**” means a yellow mineral extracted from natural gas which is used in the manufacture of fertilizer, pharmaceuticals and other products;

“**sulphur recovery**” means the process within a natural gas processing facility whereby natural gas containing hydrogen sulphide undergoes a series of chemical reactions to isolate elemental sulphur;

“**sweet gas**” means natural gas that is not sour gas;

“**take-or-pay**” means a customer’s obligation to a minimum revenue or volume commitment;

“**TC Energy**” means TC Energy Corporation;

“**TDG**” means the transportation of dangerous goods;

“**Third Supplemental Note Indenture**” means the third supplemental note indenture issued under the Note Indenture dated February 22, 2022;

“**throughput**” means: with respect to a gas plant, inlet volumes processed (including any off-load or reprocessed volumes); with respect to a pipeline, the estimated gas or liquid volume transported therein; and with respect to NGL processing facilities, the volume of inlet NGLs processed;

“**TSX**” means the Toronto Stock Exchange;

“**turbo expansion**” is an NGL recovery process that utilizes the expansion and subsequent cooling of incoming raw gas to extract a high percentage of NGLs from the raw gas to meet or exceed sales gas specifications;

“**U.S.**” means the United States of America;

“**utilization rate**” means: with respect to a gas plant, throughput divided by license capacity; with respect to a pipeline, throughput divided by the estimated pipeline capacity; and with respect to other facilities which do not have a specified license capacity, throughput divided by the estimated capacity of such facility; in all cases expressed as a percentage;

“**WCSB**” means the Western Canada Sedimentary Basin; and

“**WTI**” means West Texas Intermediate, a grade of crude oil used as a benchmark in oil pricing.

ABBREVIATIONS

In this AIF, the following abbreviations have the meanings set forth below:

Bbl and Bbls	Barrel and barrels, each barrel representing 34.972 Imperial gallons or 42 U.S. gallons
Bbls/d	Barrels per day
Mcf/d	Thousand standard cubic feet per day
MMcf/d	Million standard cubic feet per day
Tonne	One thousand kilograms
T/d	Tonnes per day

FORWARD LOOKING INFORMATION

To provide readers with information regarding Keyera, including its assessment of future plans and operations, its financial outlook and future prospects overall, this AIF contains certain statements that constitute “forward-looking information” within the meaning of applicable Canadian securities legislation (collectively, “forward-looking information”). Forward-looking information is typically identified by words such as “anticipate”, “continue”, “estimate”, “expect”, “may”, “will”, “project”, “should”, “plan”, “intend”, “believe”, and similar words or expressions, including the negatives or variations thereof. All statements other than statements of historical fact contained in this document are forward-looking information, including, without limitation, statements regarding:

- industry, market and economic conditions and any anticipated effects on Keyera;
- Keyera’s future financial position and operational performance;
- future dividends, including anticipated changes to Keyera’s dividend payment schedule;
- business strategy, anticipated growth and plans of management;
- budgets, including future capital, operating or other expenditures and projected costs;
- estimated utilization rates and throughputs;
- expected costs, in-service dates, processing capacity and schedules for KAPS, the Pipestone gas plant and other capital projects (including projects under construction/development);
- Stonepeak Partners LP’s acquisition of a 50% interest in KAPS, including the anticipated timing thereof;
- expected schedules for turnarounds and in-line inspections;
- anticipated timing for future revenue streams;
- plans and developments with respect to low-carbon projects in Alberta’s Industrial Heartland;
- plans with respect to employee engagement initiatives;
- treatment of Keyera and its projects under existing and proposed governmental regulatory regimes;
- the operation and effectiveness of risk management programs;
- expected outcomes with respect to legal proceedings and potential insurance recoveries;
- expectations regarding Keyera’s ability to maintain its competitive position, raise capital and add to its assets through acquisitions or internal growth opportunities;
- expectations as to the financial impact of Keyera’s compliance with future environmental and carbon tax laws or regulation;
- the expected impact of the COVID-19 pandemic on Keyera and the economy generally, including without limitation, potential supply chain impacts;
- plans, targets, and strategies with respect to reducing greenhouse gas emissions and anticipated reductions in emissions levels;
- strategies, goals and plans with respect to community engagement, including Indigenous community engagement; and
- Keyera’s ESG, climate change and risk management initiatives and their implementation generally.

All forward-looking information reflects Keyera’s beliefs and assumptions based on information available at the time the applicable forward-information is made and in light of Keyera’s current expectations with respect to such things as the success of Keyera’s operations and growth and expansion projects, the outlook for general economic trends, industry trends, commodity prices and interest rates, Keyera’s access to the capital markets and the cost of raising capital, producer and customer activity levels, fluctuations in energy prices based on worldwide demand and geopolitical events, the COVID-19 pandemic and the duration and impact thereof, general compliance with Keyera’s plans, strategies, programs, and goals across its reporting and monitoring systems among employees, stakeholders, and service providers, the integrity and reliability of Keyera’s assets, and the governmental, regulatory and legal environment. For all construction projects, estimated completion times and costs assume that construction proceeds as planned on schedule and on budget and that, where required, all regulatory approvals and other third-party approvals or consents are received on a timely basis. In some instances, this AIF may also contain forward-looking information attributed to third parties. Forward-looking information does not guarantee future performance. Management believes that its assumptions and expectations reflected in the forward-looking information contained herein are reasonable based on the information available on the date such

information is provided and the process used to prepare the information. However, it cannot assure readers that these expectations will prove to be correct.

All forward-looking information is subject to known and unknown risks, uncertainties and other factors that may cause actual results, events, levels of activity and achievements to differ materially from those anticipated in the forward-looking information. Such risks, uncertainties and other factors include, without limitation, the following:

- Keyera's ability to implement its strategic priorities and business plan and achieve the expected benefits;
- general industry, market and economic conditions;
- activities of customers, producers and other facility owners;
- operational hazards and performance;
- the effectiveness of Keyera's risk management programs and strategies;
- competition;
- changes in commodity composition and prices, inventory levels, supply/demand trends and other market conditions and factors;
- delay and disruptions to global supply chains and labour shortages;
- processing and marketing margins;
- climate change risks, including the effects of unusual weather and natural catastrophes;
- climate change effects and regulatory and market compliance and other costs associated with climate change;
- variables associated with capital projects, including the potential for increased costs, timing, delays, cooperation of partners, and access to capital on favourable terms;
- fluctuations in interest, tax and foreign currency exchange rates;
- the impact of inflation on the economies and business environments in which Keyera operates;
- counterparty performance and credit risk;
- changes in operating and capital costs;
- cost and availability of financing;
- ability to expand, update and adapt infrastructure on a timely and effective basis;
- decommissioning, abandonment and reclamation costs;
- ability to attract, train and retain skilled employees and contractors;
- reliance on key personnel and third parties;
- relationships with external stakeholders, including Indigenous stakeholders;
- technology, security and cybersecurity risks;
- potential litigation and disputes;
- uninsured and underinsured losses;
- ability to service debt and pay dividends;
- changes in credit ratings;
- reputational risks;
- changes in environmental and other laws and regulations;
- the ability to obtain regulatory, stakeholder and third-party approvals;
- regulatory environment and decisions, and compliance with Indigenous Rights, as well as evolving reconciliation and consultation requirements;
- actions by governmental authorities;
- global health crises, such as pandemics and epidemics, including the COVID-19 pandemic and the unexpected impacts related thereto;
- the effectiveness of Keyera's existing and planned ESG and risk management programs;
- ongoing geopolitical events, including, without limitation, conflicts in Eastern Europe;
- the ability of Keyera to achieve specific targets that are part of its ESG initiatives, including those relating to emissions reduction targets, as well as other climate-change related initiatives;

and other risks, uncertainties and other factors, many of which are beyond the control of Keyera, and some of which are discussed under "Risk Factors" in this AIF. Further, because there is interconnectivity between

many of the risks Keyera faces, it is possible that different constellations of risk could materialize which could result in unanticipated outcomes or consequences.

Readers are therefore cautioned that the foregoing list of important factors is not exhaustive and they should not unduly rely on the forward-looking information included in this AIF. Further, readers are cautioned that the forward-looking information contained herein is made as of the date of this AIF. Unless required by law, Keyera does not intend and does not assume any obligation to update any forward-looking information. All forward-looking information contained in this AIF is expressly qualified by this cautionary statement. Further information about the factors affecting forward-looking information and management's assumptions and analysis thereof, is available in filings made by Keyera with Canadian provincial securities commissions available on SEDAR at www.sedar.com.

PRESENTATION OF FINANCIAL INFORMATION

This AIF refers to certain financial measures that are not determined in accordance with Canadian generally accepted accounting principles applicable to publicly traded companies (“**GAAP**”), also known as International Financial Reporting Standards, and which are not disclosed in the 2022 Financial Statements. Investors are cautioned that non-GAAP measures do not have standardized meaning under International Financial Reporting Standards and may not be comparable with measures provided by other public corporations or entities. In this AIF, Keyera has disclosed information relating to realized margin, a supplemental, non-GAAP financial measure that Keyera uses to assess and explain its financial performance, as described below:

Measure	Definition	Use
realized margin	operating margin excluding unrealized gains and losses from commodity related risk management contracts. The most directly comparable financial measure to realized margin that is determined in accordance with GAAP and disclosed in the 2022 Financial Statements is operating margin.	used to assess Keyera’s financial results for the operating segments in the period without the effect of non-cash mark-to-market changes from risk management contracts related to future periods

For more information with respect to "realized margin", including a reconciliation to the most directly comparable GAAP measure, see the “Non-GAAP and Other Financial Measures” section and the “Segmented Results of Operations” section of the management’s discussion and analysis of Keyera dated February 15, 2023 for the year ended December 31, 2022 (“**2022 MD&A**”), and the “Non-GAAP and Other Financial Measures” section and the “Segmented Results of Operations” section of the management’s discussion and analysis of Keyera dated February 16, 2022 for the year ended December 31, 2021 (the “**2021 MD&A**”), which sections are incorporated by reference in this AIF. The 2022 MD&A and the 2021 MD&A are available on SEDAR at www.sedar.com and Keyera’s website at www.keyera.com.

DESCRIPTION OF THE STRUCTURE OF KEYERA

The Corporation is a corporation formed under the ABCA and whose Common Shares trade on the TSX under the symbol “KEY”. Its registered office and head office are located at 200, 144 – 4th Avenue SW, Calgary, Alberta T2P 3N4. The articles and bylaws of the Corporation are available on SEDAR at www.sedar.com and on the Corporation’s website at www.keyera.com. The Corporation directly or indirectly owns 100% of the voting interests in its operating subsidiaries. The following diagram¹ sets out the name and jurisdiction of the significant operating subsidiaries of the Corporation as of the date of this AIF.

The Corporation is the managing partner of the Partnership, Keyera’s primary Canadian operating subsidiary. The Partnership owns and operates the majority of Keyera’s Canadian assets and businesses. Keyera’s only Canadian assets that are not owned by the Partnership are: (i) the Rimbey Pipeline, which is owned and operated by Rimbey LP; and (ii) the ADT, which is owned and operated by Alberta Diluent Terminal Ltd. KEI carries out Keyera’s business activities in the U.S.

1. Rimbey Pipeline Limited Partnership owns 100,000 preferred shares of Keyera Energy Ltd.

GENERAL DEVELOPMENT OF THE BUSINESS

Keyera operates an integrated Canadian-based energy infrastructure business with extensive interconnected assets and depth of expertise in delivering energy solutions. See “Business of Keyera” for a description of Keyera’s business. Keyera’s vision is to be the North American leader in delivering energy infrastructure solutions. In support of this vision, Keyera is committed to delivering steady disciplined growth to create long-term value for Shareholders. The four pillars of Keyera’s strategy are to:

- demonstrate financial discipline;
- drive competitiveness of its assets;
- strengthen its integrated value chain; and
- ensure long-term business sustainability.

Over the last three years, Keyera’s drive to deliver safe, reliable and cost effective operations has been reflected in its operational excellence, cost efficiency and asset optimization efforts. Over this period, Keyera has grown its business by investing approximately \$1.82 billion in growth projects and acquisitions, underpinned by fee-for-service contracts. Keyera has made significant capital investments in enhancing its strong presence in northwestern Alberta to provide infrastructure solutions to producers in the NGL-rich Montney and Duvernay geological zones. Keyera has approximately 950 MMcf/d of gas processing capacity and 90,000 Bbls/d of condensate stabilization capacity to serve producer customers operating in the Montney and Duvernay areas. The KAPS pipeline system, currently under construction, is expected to be operational in the second quarter of 2023. Once operational, KAPS will transport NGLs and condensate from the NGL-rich Montney region to Keyera’s NGL infrastructure in Fort Saskatchewan, Alberta. Other key areas of investment over the past three years include the acquisition of additional working interest ownership in the Keyera Fort Saskatchewan complex, adding incremental capacity to Keyera’s fractionation, de-ethanization, underground NGL storage and the Fort Saskatchewan Pipeline (FSPL) system.

Keyera’s growth strategy has been coupled with maintaining a conservative financial structure and maintaining its dividends. As part of Keyera’s prudent approach to managing its balance sheet, over the past three years it has extended its five year, \$1.5 billion credit facility, raised gross proceeds of \$800 million through the 2020 and 2022 public offerings of the Keyera Medium Term Notes, raised gross proceeds of \$350 million through the 2021 public offering of the Subordinated Hybrid Notes, raised gross proceeds of \$230 million through the 2022 public offering of 8,130,500 Common Shares and raised approximately \$77 million through its Premium DRIP.² Since 2020, Keyera has maintained two investment grade issuer credit ratings. For additional information on these matters, see “Dividends” and “Capital Structure of the Corporation”.

Consistent with its overall business strategy, Keyera considers several factors when evaluating capital projects and acquisitions, including: (i) strategic fit; (ii) project returns; (iii) quality of cash flows; (iv) business risks; (v) preserving financial flexibility; and (v) sustainability or ESG-related factors. Keyera’s strong customer focus has enabled it to secure contractual underpinnings for its major projects and provided flexibility in how it is able to deliver these projects.

The following tables highlight some key developments in Keyera’s business over the previous three years. See “Business of Keyera” for more information on each of these initiatives, and see “Forward Looking Information” and “Risk Factors” for more information on the factors that could affect the development of projects not yet been completed. For all construction projects, estimated completion times assume that construction proceeds as planned and that, where required, all regulatory approvals and other third-party approvals or consents are received on a timely basis.

² Keyera suspended its DRIP and Premium DRIP program on April 22, 2020.

DEVELOPMENTS IN 2020	
Wapiti Gas Plant	Phase 2 of the Wapiti gas plant was completed in December 2020 and added an additional 150 MMcf/d of sour gas processing capacity.
Solar Power Purchase Agreement	In December 2020, Keyera entered into a 15-year power purchase agreement with Samsung Renewable Energy Inc. (now Capstone Infrastructure Corporation) to purchase solar power from a 25-megawatt capacity solar generation facility located north of Drumheller, Alberta. The facility is anticipated to begin commercial operation in mid-2023.
Gold Creek Compressor and Gathering System Expansion	This project provided additional compression and included an expansion of the Wapiti gathering system. The compressor station was completed in the first quarter of 2020, and the additional compression and expansion of the Wapiti gathering system was completed in the second quarter of 2020.
Pipestone Gas Plant	The Pipestone gas plant commenced operations in October 2020 and included a total of 200 MMcf/d of sour gas processing capacity with acid gas injection capabilities, 24,000 Bbls/d of condensate processing capacity, and associated water disposal facilities. The associated Pipestone Liquids Hub was acquired from Ovintiv (then Encana Corporation) and put into service in 2018 in conjunction with the parties entering into a 20-year infrastructure development and midstream service agreement, and has 14,000 Bbls/d of condensate processing capacity.
KFS – Storage Expansion	The 16th storage cavern was completed and came into service in April 2020. Washing of the 17th and 18th storage caverns continued throughout the year.
Optimization and Suspension of Certain Gas Plant Operations	Keyera announced the suspension of operations at the Bigoray, Minnehik Buck Lake and West Pembina gas plants.
Wildhorse Terminal	Construction of the Wildhorse Terminal in Cushing, Oklahoma continued to advance.
South Cheecham Sulphur Facilities	Keyera and Enbridge continued development of its sulphur handling, forming, and storage facilities at the South Cheecham rail and truck terminal, with detailed engineering and regulatory activities continuing through 2020. Ownership of the sulphur facilities is generally consistent with Keyera and Enbridge's 50/50 ownership of the terminal.
KAPS Pipeline System	Keyera continued development of KAPS through 2020. In light of prevailing industry and market uncertainty, in April 2020, Keyera announced that, with the support of its customers, the project had been deferred by approximately one year. Engineering and regulatory work continued throughout 2020. Approvals from the AER to proceed with the construction of the KAPS main line was received in April 2020.
DEVELOPMENTS IN 2021	
Optimization and Suspension of Certain Gas Plant Operations	With the suspension of operations at the Brazeau North and Ricinus gas plants, Keyera completed its optimization of its southern gas processing assets.
Alberta Crude Terminal	During the second quarter of 2021, Keyera acquired the remaining 50% ownership interest in the Alberta Crude Terminal and now owns and operates 100% of the facility.
KFS – Storage Expansion	The 17th storage cavern was completed and came into service in September 2021. Washing of the 18th storage cavern continued through 2021.
Wildhorse Terminal	The Wildhorse Terminal in Cushing, Oklahoma commenced operations in July 2021. The terminal includes 12 above ground storage tanks with 4.5 million Bbls of working capacity.

South Cheecham Sulphur Facilities	Keyera and Enbridge continued development of its sulphur handling, forming, and storage facilities at the South Cheecham rail and truck terminal, with construction progressing through 2021.
KAPS Pipeline System	Keyera continued development of KAPS with construction progressing steadily through 2021.
DEVELOPMENTS IN 2022	
KFS – Storage Expansion	The 18th storage cavern was completed and came into service in January 2023.
KEI Disposition of Hull Terminal	In January 2022, KEI, Keyera's U.S. subsidiary, completed the sale of the Hull terminal and Hull terminal pipeline system, including all hydrocarbon inventory owned by Keyera in relation to the asset.
Memorandum of Understanding with Shell Canada - Low-Carbon Hub	In March 2022, Keyera and Shell Canada announced a memorandum of understanding to explore opportunities to build a future gathering and distribution network to transport captured CO ₂ from Keyera and other operations in Alberta's Industrial Heartland to Shell Canada's proposed Atlas carbon capture and storage hub.
Memorandum of Understanding with CN – Clean Energy Terminal	In August 2022, Keyera and CN announced a memorandum of understanding to evaluate the creation of a specialized clean energy terminal in Alberta's Industrial Heartland, which would aggregate conventional and clean energy from multiple sources to support transportation of Alberta's energy products.
Keyera Fort Saskatchewan Working Interest Acquisition	In December 2022, Keyera entered into a purchase and sale agreement to acquire an additional 21% working interest in the Keyera Fort Saskatchewan (KFS) complex from Plains Midstream Canada, bringing its total ownership in KFS to 98%. The acquisition adds more than 25% incremental capacity to Keyera's existing fractionation, de-ethanization, underground NGL storage capacity and its Fort Saskatchewan Pipeline (FSPL) system which connects KFS to the Edmonton-area market. The transaction closed on February 13, 2023.
South Cheecham Sulphur Facilities	Keyera and Enbridge continued development of its sulphur handling, forming, and storage facilities at the South Cheecham rail and truck terminal, with construction progressing through 2022. The sulphur facilities are expected to be operational in the first quarter of 2023.
Pipestone Relicensing	In the third quarter of 2022, Keyera added 20 MMcf/d of capacity at its Pipestone gas plant by relicensing the facility to 220 MMcf/d.
Low Carbon Power Purchase Agreement with TC Energy	In October 2022, Keyera entered into a 15-year agreement with TC Energy, beginning in January 2025, to purchase 20 mega-watt per hour of firm, carbon free energy through a virtual power purchase agreement. Power will be generated through a combination of wind and solar generations with hydro pumping storage providing firming capacity during periods of low renewable generation.
KAPS Pipeline System	Keyera continued development of KAPS with construction progressing steadily through 2022. KAPS is expected to be operational in the second quarter of 2023.

BUSINESS OF KEYERA

Overview

Keyera operates an integrated Canadian-based energy infrastructure business with extensive interconnected assets and expertise in delivering energy solutions. Infrastructure businesses operate in the oil and gas sector between the upstream sector, which includes oil and gas exploration and production businesses, and the downstream sector, which includes the refining, distribution and retail marketing of finished products. Keyera is organized into three highly integrated operating segments³:

1. *Gathering and Processing* – Keyera owns and operates raw gas gathering pipelines and processing plants, which collect and process raw natural gas, remove waste products and separate the economic components – primarily NGLs – before the sales gas is injected into pipeline systems for transportation to end-use markets. Keyera also provides condensate handling services through its condensate gathering pipelines and stabilization facilities.
2. *Liquids Infrastructure* – Keyera owns and operates a network of facilities for the gathering, processing, fractionation, storage and transportation of the by-products of natural gas processing, including NGLs in mix form and specification NGLs such as ethane, propane, butane and condensate. In addition, this segment includes Keyera’s iso-octane facilities at AEF, its liquids blending facilities, its interest in the crude oil storage facility at Base Line Terminal and its interest in the Wildhorse Terminal in Cushing, Oklahoma.
3. *Marketing* – Keyera markets a range of products associated with its two infrastructure business lines, primarily propane, butane, condensate and iso-octane, and also engages in liquids blending activities.

Keyera’s Gathering and Processing and Liquids Infrastructure businesses are predominantly fee-for-service, while the Marketing business generates margin from the distribution and sale of products such as NGLs, iso-octane, natural gas and crude oil. While the relative proportion of Keyera’s operating margin generated by its fee-for-service segments versus the Marketing segment may vary year over year, Keyera manages its portfolio with a goal of maintaining a high proportion of fee-for-service business over the long-term. Keyera’s integrated business model creates synergies between Keyera’s two fee-for-service businesses (Gathering and Processing and Liquids Infrastructure) and its Marketing business. As Keyera has grown its two infrastructure businesses, it has often been able to create incremental commercial opportunities for its Marketing business. Keyera’s Marketing business can access Keyera’s infrastructure assets at market rates to facilitate its commercial activities. The following tables set out operating margin and realized margin by segment for the last three years.

³ Keyera also has a Corporate business segment that is not considered a material part of its business.

Operating Margin (\$ thousands) ¹				
Segment	2020	2021	2022	Three Year Average

Notes:

- (1) See the 2022 Financial Statements and accompanying management's discussion and analysis available on SEDAR at www.sedar.com for a further discussion of operating margin and realized margin.
- (2) Includes intersegment transactions.
- (3) With the completion of Keyera's gathering and processing optimization program in 2021, the "Other" category in 2020 includes operating margin (net of royalties and operating expenses) from production from oil and gas reserves acquired by Keyera in connection with its acquisition of ownership interests in the Minnehik Buck Lake, West Pembina, Bigoray and Cynthia gas plants. In 2021 and 2022, those oil and gas reserves were removed from Keyera's operating margin and placed in Keyera's deconstruction, abandonment, reclamation and remediation (DARR) program. These reserves and associated production are not material to Keyera and Keyera has no plans to drill any additional wells. Keyera divested its Cynthia production assets in 2021.

(4) Realized margin is a non-GAAP measure. See “Presentation of Financial Information” for definition and use.

In the Gathering and Processing and Liquids Infrastructure businesses, many of the contracts with customers include take-or-pay commitments. In 2022, contribution from take-or-pay agreements accounted for approximately 35% of total operating margin and realized margin (approximately 40% in 2021)^{4,5}. Additionally, in the Gathering and Processing business, Keyera secured, in addition to take-or-pay contracts, area dedications from key producers around the Wapiti and Pipestone gas plants in northwestern Alberta and the Rimbey gas plant.

For a description of Keyera’s business strategy, see “General Development of the Business” above. The following map shows Keyera’s principal operations in Canada.

⁴ Percentages include inter-segment transactions.

⁵ The reduction in operating margin and realized margin from take-or-pay agreements from 2021 to 2022 was largely due to Keyera’s Marketing business segment 2022 performance.

Gathering and Processing Business Segment

Description of Gathering and Processing Business

As of the end of 2022, Keyera had ownership interests in 12 active gas plants⁶, all of which are located in Alberta. Keyera operates 9 of the 12 active gas plants.

The Gathering and Processing business segment includes raw gas gathering systems, raw NGL gathering systems and gas processing plants strategically located in the natural gas production areas on the western side of the WCSB. Several of the gas plants are interconnected by raw gas gathering pipelines, allowing raw gas to be directed to the gas plant best suited to process the gas. Collectively, Keyera's Gathering and Processing facilities constitute a network that is well-positioned in its operating areas to serve exploration and production activity in the WCSB.

Keyera's northern Gathering and Processing infrastructure is well-positioned to serve producer activity in the NGL-rich Montney and Duvernay geological zones. These assets include the Pipestone gas plant, the Wapiti gas plant and the Simonette gas plant. Customer's service demands in this area go beyond gas handling solutions, and also include condensate and water handling capabilities. As a result, Keyera's assets in this region have significant fluid separation, condensate stabilization and water handling infrastructure. Keyera's southern Gathering and Processing infrastructure is well positioned in the Duvernay, Cardium, Glauconite and Spirit River formations. These assets include a large majority of Keyera's legacy assets and have interconnecting gas gathering systems to direct supply to various facilities for processing. The majority of these assets also have interconnectivity to provide natural gas egress to Keyera's Keylink system to facilitate NGL processing at Keyera's fractionation assets.

In 2019, Keyera's Gathering and Processing business segment embarked on an optimization program in respect of its southern Alberta gas infrastructure assets. This program, completed in 2021, focused on increasing utilization in the south region, lowering per unit operating costs and reducing CO₂ emissions. Keyera utilized its interconnected pipeline systems to redirect volumes from plants being shut-in to those that remained in operation. In May 2020, Keyera suspended operations at its Minnehik Buck Lake gas plant, and suspended operations at its West Pembina and Bigoray gas plants in August and September 2020, respectively. The program was completed with the suspension of operations at Keyera's Brazeau North and Ricinus gas plants in July and September 2021, respectively.

Keyera's Gathering and Processing business segment charges fees, at market rates, to Keyera's Marketing business for the use of its facilities. In 2022, Keyera's Gathering and Processing business accounted for 10% of Keyera's total revenues (without elimination of inter-segment transactions), 30% of Keyera's total operating margin and 30% of Keyera's total realized margin, compared to 11% of total revenues, 31% of total operating margin and 31% of total realized margin in 2021. Keyera believes operating margin and realized margin provide an accurate portrayal of operating profitability by business segment.

⁶ Keyera also has interests in six gas plants where operations are currently shut in or where it has currently suspended operations.

The following table provides an overview of the key operating features for each of Keyera's gas processing plants that were active in 2022.

Gas Plant ⁽¹⁾	Ownership Interest (%) ⁽²⁾	Plant License	Date of Last Turnaround ⁽³⁾	Licensed Capacity ⁽⁴⁾⁽⁵⁾ (MMcf/d)	Average Annual Daily Throughput ⁽⁴⁾⁽⁵⁾ (MMcf/d)	Facilities

Notes:

- (1) Keyera is the operator of all gas plants listed above except: (a) Edson, operated by Repsol Canada Energy Partnership, (b) Alder Flats (formally known as "O'Chiese Nees-Ohpawganu'ck"), operated by Spartan Delta, and (c) Pipestone, operated by Ovintiv. Keyera also has a 36% ownership interest in the Gregg Lake-Obed Pipeline system, a 129-kilometre sour gas pipeline system operated by Energy Transfer Canada that originates in the Hinton area and connects to the Kaybob 3 gas plant located in Greenview County, Alberta. Keyera is also the sole owner of the Caribou gas plant, located in northeast British Columbia, which suspended operations in December 2015.
- (2) Ownership interest as at December 31, 2022, rounded to the nearest whole number.
- (3) Turnaround cycles are typically four to six years based on asset assessment.

- (4) Information in these columns: (a) is presented as at December 31, 2022; (b) represents total gross capacity and throughput (not only Keyera's net capacity); and (c) has been rounded to the nearest whole number. The average annual daily throughput is calculated based on the total annual throughput for the facility divided by 365 days.
- (5) Actual available processing capacity at each plant is often less than the licensed capacity depending on several factors, including the capacity of various functional units, operating conditions and gas composition. The difference between licensed capacity and actual operating capacity may be more significant where plant operating conditions or actual gas compositions differ significantly from original plant or equipment design.
- (6) TE – turbo expansion, LO – lean oil recovery, RFG – refrigeration. In the past, modifications to the refrigeration systems have been completed at the Brazeau River, Nordegg River and Pembina North gas plants to enhance recoveries.
- (7) R – NGL rail handling facilities, T – NGL truck handling facilities.
- (8) In 2022, the Nordegg facility went through a turnaround and converted to a sweet gas licensed plant.
- (9) The Brazeau North and Ricinus gas plants each suspended operations in July and September 2021, respectively.
- (10) The Minnehik Buck Lake, West Pembina and Bigoray gas plants each suspended operations in May, August and September 2020, respectively.
- (11) The reference to 70% reflects Keyera's working interest in the Alder Flats plant and associated gathering pipelines. When including working interest ownership in the associated fuel gas line, Keyera's overall working ownership interest across all functional units covered under the project agreements is approximately 64%. Turnarounds at the Alder Flats plant are split by Trains. Train 2 was completed in 2022 and Train 1 is planned for 2024.
- (12) Keyera's Wapiti gas plant utilizes field compression.

Overview of Key Initiatives

Over the past few years, Keyera's business strategy in respect of its Gathering and Processing business segment has focused on: (i) optimization and increased utilization of Keyera's southern Alberta gas processing assets; (ii) expanding its infrastructure in the prolific Montney and Duvernay developments; and (iii) reducing CO₂ and GHG emissions. Examples of how Keyera has been implementing these strategies are outlined below.

1. Optimization and Increased Utilization and Profitability of Southern Gas Processing Assets

(a) Optimization

Due to reduced exploration and production activity around the southern gas processing assets, Keyera embarked on an optimization program to "right-size" its southern infrastructure for the next decade. This program utilizes Keyera's pipeline interconnectivity to process current and future production at fewer gas plants. The primary objectives of this program were to:

- increase earnings from competitive market-based fees;
- improve customer netbacks through better integrations with the Liquids Infrastructure and Marketing segments;
- increase market share through Keyera's competitive advantage of interconnected network of plants and low-cost structure; and
- reduce CO₂ emissions.

These measures and objectives were intended to provide Keyera with an opportunity to grow its business without significant capital investment. With the closing of the Minnehik Buck Lake, West Pembina and Bigoray gas plants in 2020 and the Ricinus and Brazeau North gas plants in September 2021, this program is now complete and accomplishing the objectives set out above, including reducing GHG and CO₂ emissions, on an absolute basis, by approximately 13% relative to 2019.

(b) Utilization and Profitability

From 2021 to 2022, Keyera increased its southern asset utilization from 59% to 68%. This was accomplished using multiple tactics including the optimization program, re-contracting its existing customers, and signing new customers.

With the increased drilling and market fundamentals in the past two years, Keyera has seen a renewed optimism around its assets which has led to contract extensions, renewals and signings.

2. Northern Assets Poised to Capture the Liquids Rich Montney Development

Wapiti Area: Located south of Grande Prairie, Alberta, the Wapiti area is situated in one of the condensate-rich regions of the Montney producing zone. The Wapiti gas plant has a licensed capacity of 300 MMcf/d of sour gas processing, acid gas injection facilities, condensate stabilization facilities with capacity of 25,000 Bbls/d, water disposal facilities and associated gathering systems and field compressor stations.

The field compressor stations and associated gathering infrastructure are the: (1) Gold Creek Station, including a pipeline system consisting of a 12-inch sour gas gathering pipeline and an 8-inch condensate and water pipeline, along with a compressor station; and (2) Keyera Pipestone Compressor Station and North Wapiti pipeline system, consisting of a 12-inch sour gas gathering pipeline, an 8-inch condensate and water pipeline and a compressor station. In 2022 the Keyera Pipestone Compressor Station was expanded to a licensed facility capacity of 130 MMcf/d. This expansion was executed under a newly created joint venture relationship at the Keyera Pipestone Compressor Station and ownership interests were equalized accordingly. Keyera now owns approximately 84% of the facility after the expansion, versus the 100% previous ownership.

Pipestone Area: The Pipestone area is located northwest of Grand Prairie. In October 2020, the Pipestone gas plant became operational and began processing volumes from its anchor tenant, Ovintiv. The Pipestone gas plant was developed in a joint effort with Ovintiv to support their condensate-rich Montney development under a 20-year infrastructure agreement. The agreement has a combination of take-or-pay, fee-for-service and area dedication components. Ovintiv is the initial operator and Keyera has the option to assume operatorship in 2026.

The Pipestone assets include the Pipestone NGL hub and the Pipestone gas plant. The NGL hub is designed to handle 14,000 Bbls/d of produced condensate and 8,000 Bbls/d of produced water. The Pipestone gas plant is designed to process up to 200 MMcf/d of sour gas containing up to 8% H₂S, 24,000 Bbls/d of produced condensate and 16,000 Bbls/d of produced water. The plant's initial capacity was 200 MMcf/d, but in September 2022 the facility was relicensed to increase design capacity to 220 MMcf/d, and increase the produced water disposal capacity to 22,000 Bbls/d. The facility's gas processing capacity of 220 MMcf/d remains fully contracted under long term agreements.

In January 2023, Keyera sanctioned an expansion to the Pipestone gas plant which will add an incremental 40 MMcf/d of processing capacity that is expected to be available the first quarter of 2024. The project is expected to cost between \$60 million and \$70 million and is supported by long-term take-or-pay agreements. Upon completion, the expansion project will bring the Pipestone gas plant's total gas processing capacity to 260 MMcf/d.

Simonette Area: The Simonette gas plant is located in the NGL-rich Montney and Duvernay formations in northwest Alberta. Over the past few years, Keyera has expanded its footprint at the Simonette gas plant to include acid gas injection capabilities and expansion of its

NGL recovery system. The total licensed capacity of the Simonette gas plant is now 450 MMcf/d.

Keyera believes the northern Gathering and Processing assets, as described above, are not only poised to capture the growth in the Montney and Duvernay, but with KAPS expected to be operational in the second quarter of 2023, Keyera expects these assets to be well positioned to contribute volumes to that infrastructure.

3. Focus on GHG Emissions Reductions

Keyera is committed to taking concrete actions to reduce emissions at its assets. By publicly setting corporate GHG emissions intensity reduction targets, Keyera is demonstrating the seriousness of its commitment to efficient and sustainable operations.

The southern optimization program took the first steps in meaningfully reducing its emissions intensity of its assets. By concentrating its efforts on operational efficiencies and other GHG reduction initiatives, Keyera is confident it can continue to achieve further reductions. See “Environmental, Social and Governance Matters – Environmental Stewardship” section.

Business Arrangements

Most of Keyera’s Gathering and Processing business is conducted on a fee-for-service basis. The fees can be calculated a number of ways, depending on the facility and the nature of the services provided. Keyera’s gas handling agreements tend to be based on either a flow-through operating cost structure or a fixed fee structure. In flow-through cost structures, the fees are generally comprised of a capital component and a flow-through operating component. The capital component is generally a function of the replacement cost of capital invested in the facility with a reasonable rate of return in light of market conditions, while the operating component is generally based on the customer’s *pro rata* share of the operating costs for the facility calculated based on total throughput. In 2022, the majority of Keyera’s total Gathering and Processing business segment revenue was derived from flow-through operating cost business arrangements.

Gas Handling Agreements:

Keyera’s gas handling agreements generally fall into one of two categories based on the type of service:

- *Firm service contracts:* Firm service contracts generally have the highest priority in the event of apportionment. These contracts will frequently contain a take-or-pay provision and/or area dedications under which the producer agrees to deliver all gas it produces from specified reserves to a facility.
- *Interruptible-service contracts:* Under interruptible-service contracts, services are provided to the customer only if the facility has capacity after all firm service contracts (or other contracts with higher priority) have been satisfied. There are frequently different levels of interruptible-service that are offered. Each interruptible-service contract will specify the processing priority for that gas. While efforts are made to process each customer’s interruptible-service gas production, when capacity is limited, the processing priority identified in the contract determines how the available capacity will be apportioned, with first preference going to firm service contracts, described above.

Gas handling agreements may also be categorized according to the length of their term:

- Evergreen contracts: Evergreen contracts continue in force until terminated by either party by providing prior notice to the other party (generally between one and six months prior notice).
- Long term contracts: Keyera considers long term contracts to be those that remain in force for a period of three years or more. In some instances, the term of these contracts is defined by the life of natural gas reserves dedicated to the facility.

In 2022, slightly more than half of the throughput at Keyera's Gathering and Processing facilities was handled under long term contracts with the remaining throughput handled under interruptible-service, evergreen contracts. Typically, new build plants are under-pinned by long-term contracts.

Construction, Ownership and Operation Agreements:

Where there are co-owners in a facility, fee revenues collected for services performed at that facility are generally allocated to the owners in one of two ways:

- Excess capacity method: Facility owners are entitled to use their share of capacity of the facility and to receive a share of third-party fee revenue based on their share of capacity that is in excess of their volume needs. Owners who are using more than their proportionate share of capacity generally pay an "owner over-usage fee" which is also allocated using the same method.
- Working interests method: All producers, including facility owners, bringing production to or through the facility pay a fee. The total fee revenue collected at the facility is then allocated to the owners based on the ownership interest they hold in the facility.

Liquids Infrastructure Business Segment

Description of Liquids Infrastructure Business

The Liquids Infrastructure segment provides processing, fractionation, storage, transportation, NGL blending and terminalling services for NGLs and crude oil and produces iso-octane. These services are provided to customers through an extensive network of facilities, including the following assets:

- NGL and crude oil pipelines;
- underground NGL storage caverns;
- above ground storage tanks;
- NGL fractionation and de-ethanization facilities;
- pipeline, rail and truck terminals;
- NGL blending facilities; and
- the AEF facility.

See the table on page 26 of this AIF for a list and description of Keyera's main Liquids Infrastructure facilities.

Most of Keyera's Liquids Infrastructure assets are located in, or connected to, the Edmonton/Fort Saskatchewan area in Alberta, including the KFS facility, the Fort Saskatchewan Condensate System and connecting pipelines, AEF, Edmonton Terminal, Josephburg Terminal, ADT and Base Line Terminal. The Edmonton/Fort Saskatchewan area is one of four key energy hubs in North America, with a significant portion of NGL production from the WCSB being delivered there for fractionation into specification products and delivery to market.

In addition to the Edmonton/Fort Saskatchewan facilities, Keyera has a rail terminal in the South Cheecham area near Fort McMurray where Keyera is currently commissioning a 4,400 tonnes per day sulphur forming facility. Keyera also has strategically invested in NGL and crude oil terminals in Oklahoma. As well, the Rimbey gas plant, which is the terminus for Keyera's Keylink pipeline, has fractionation and ethane extraction capabilities, and is connected to the Edmonton Terminal by the Rimbey Pipeline and to the Alberta Ethane Gathering System.

The AEF facility has a licensed capacity to produce approximately 14,000 Bbls/d of iso-octane. Keyera regularly conducts performance tests of the AEF facility to optimize its performance and may, from time-to-time and subject to operational conditions and market demand, operate the AEF facility approximately ten percent above its licensed capacity. Iso-octane is a low vapour pressure, high-octane gasoline blending component. AEF uses butane as the primary feedstock to produce iso-octane. As a result, AEF's business creates positive synergies with Keyera's Marketing segment, which purchases, handles, stores and sells large volumes of butane.

On January 14, 2022, KEI sold its Hull Terminal and related pipeline assets. See: "Liquids Infrastructure Business Segment – Overview of Key Facilities and Key Initiatives – U.S. Liquids Hubs".

Keyera significantly grew its Liquids Infrastructure segment over the last several years. The location and interconnectivity of Keyera's assets are important factors driving this growth. In light of the central role that the Edmonton/Fort Saskatchewan hub plays in the WCSB, it is an area where Keyera is continuing to focus its investment activities.

Given the integrated nature of Keyera's business segments, the Liquids Infrastructure segment provides essential services to Keyera's Marketing segment by providing the physical assets essential to its ability to source, transport, process, store and deliver products across North America. Typically, the prices negotiated with producers by Keyera's Marketing segment for the purchase of NGLs reflect deductions for transportation, fractionation and handling costs, including certain fees charged to the Marketing segment by the Liquids Infrastructure segment. A portion of the revenues earned by the Liquids Infrastructure segment relate to services provided to Keyera's Marketing segment, including all the revenue from AEF and the Oklahoma Liquids Terminal. In 2022, Keyera's Liquids Infrastructure business accounted for 8% of Keyera's total revenues (without elimination of inter-segment transactions), 35% of Keyera's total operating margin and 35% of Keyera's total realized margin, compared to 11% of total revenues, 39% of total operating margin and 39% of total realized margin in 2021. Keyera believes operating margin and realized margin provide an accurate portrayal of operating profitability by business segment.

The following table presents key operating data for Keyera's main Liquids Infrastructure assets as of December 31, 2022:

Facility	Primary Products	Ownership Interest (%) ⁽¹⁾	Operator	Gross Capacity (Bbls/d) ⁽²⁾	Net Capacity (Bbls/d) ⁽²⁾
Fort Saskatchewan Facilities Fractionation ⁽³⁾ De-ethanizer ⁽³⁾ Storage ⁽⁴⁾ Pipelines ⁽⁵⁾	All NGLs	98	Keyera Partnership	66,000 30,000 16,683,000 Bbls 372,000	64,680 29,400 16,350,000 Bbls 364,500
Keyera Butane System⁽⁵⁾	Butane	100	Keyera Partnership	63,000	63,000

Notes:

- (1) The ownership interest is presented as at December 31, 2022 and has been rounded to the nearest whole number.
- (2) Units are expressed in Bbls/d unless otherwise indicated and are subject to rounding.
- (3) The gross capacity figures are approximate, based on licensing, equipment specification information and certain modelling assumptions. Actual capacity may be more or less depending on a number of factors, including operating conditions, operational constraints and optimization opportunities. Net capacity is a calculation based on the gross capacity and Keyera's percentage ownership interest.
- (4) Storage capacity at KFS is based on 18 underground caverns. See "Overview of Key Facilities and Key Initiatives" below. The storage capacities reported for the terminals and AEF reflect the approximate working capacity of the storage tanks at these sites; in some cases, the gross geometric storage tank volume capacity may be higher than the working capacity. While not specifically identified in the table, there is incremental above ground working storage at many of the facilities.
- (5) All pipeline capacity measurements are approximate based on certain modelling assumptions and may vary depending on a variety of factors, including actual operating conditions. The pipeline capacity reported in the table for the Fort Saskatchewan Facilities include the three proprietary pipelines that connect Keyera Fort Saskatchewan with the Edmonton Terminal. The volumes reported in the table for the Fort Saskatchewan Condensate System include the South Grand Rapids pipeline. See "Overview of Key Facilities and Key Initiatives" below for more information on these new pipelines.
- (6) The NGL processing and handling capability is located at the gas plant and is included in the Gathering and Processing business segment for financial reporting purposes.
- (7) Rail capacity is an estimated calculation taking into account such factors as the number of railcar spots at each facility, the hours of operation, the frequency of switches provided by the railways at each facility and the type of product being loaded or off-loaded.
- (8) Capacity reflects the shell capacity of the crude oil storage tanks that are in service. Actual working capacity of the tanks may vary from shell capacity.
- (9) After Keyera acquired the remaining interest in the Alberta Crude Terminal in the second quarter of 2021, it consolidated all commercial and operations with ADT.
- (10) Capacity reflects the forming capacity of the sulphur facility in T/d.

Overview of Key Facilities and Key Initiatives

The following summary provides a brief overview of some of the key facilities and developments in the Liquids Infrastructure business.

1. NGL Storage, Transportation and Fractionation Services

Keyera receives NGL feedstock from various sources and separates the NGL mix into saleable products, including ethane, propane, butane and condensate. Keyera's underground storage caverns are used to store NGL mix and specification products to meet seasonal and operational requirements. For example, propane can be stored in the summer months to meet winter demand; condensate can be stored to meet the diluent supply needs of the oil sands sector; and butane can be stored to meet seasonal demands of refineries, as well as Keyera's feedstock needs for the production of iso-octane at AEF.

Keyera Fort Saskatchewan ("KFS") and the Fort Saskatchewan Pipeline System ("FSPL"):
The KFS and FSPL facilities currently include: NGL fractionation facilities, a de-ethanizer, underground storage caverns, limited surface storage tanks and multiple bi-directional pipelines connecting KFS to the Edmonton Terminal. The growth projects at KFS include:

- *Cavern Development* – In the first quarter of 2023, Keyera placed its 18th storage cavern into service.

- *De-Ethanization* – Keyera’s 30,000 Bbls/d de-ethanizer processes ethane-rich streams of NGLs (referred to as C2+ mix) to create specification ethane and an NGL mix that can be fed into the fractionation facilities. The de-ethanizer is underpinned by a long term, fee-for-service agreement with a producer in the Alberta Deep Basin region.
- *Fractionation* – The total gross fractionation capacity at KFS for NGL streams (referred to as C3+ mix) is 66,000 Bbls/d.

To enable the de-ethanization and fractionation business, Keyera has multiple upstream and downstream pipeline connections, operational storage, and specification product handling facilities.

On December 14, 2022, Keyera announced that it had entered into a definitive agreement to acquire an additional 21% working interest in the KFS complex from Plains Midstream Canada, bringing its total ownership in KFS to 98%. The acquisition closed effective February 13, 2023.

KAPS Pipeline: The KAPS pipeline system is a natural gas liquids and condensate pipeline system planned to transport Montney and Duvernay production in northwestern Alberta to Fort Saskatchewan, Alberta. Originally announced in May 2019 and deferred in April 2020 due to challenging industry conditions related to the COVID-19 crisis, in August 2021, Keyera commenced construction of KAPS and expects KAPS to be operational in the second quarter of 2023. In December 2022, Stonepeak Partners LP announced that it had acquired a 50% interest in KAPS and expected the transaction to close in the first quarter of 2023.

Keyera Butane System: Keyera utilizes this pipeline to transport butane between Fort Saskatchewan and Edmonton.

Keylink Pipeline: This pipeline gathers NGL mix from multiple gas plants in Keyera’s southern region and transports the mix to the Rimbey gas plant for fractionation into specification products. Keyera connected an additional gas plant to the Keylink system in the second quarter of 2021 and continues to evaluate opportunities to connect additional third-party gas plants.

2. Crude Oil and Oil Sands Services

Over the last several years, Keyera has continued to grow its services to the oil sands sector and to expand this part of its business. Keyera leveraged its facilities and connectivity in the Edmonton/Fort Saskatchewan area to develop a condensate hub for its customers. Condensate is used as a diluent to facilitate movement of bitumen by pipeline. In developing its diluent handling services and infrastructure, Keyera focused on anticipating and responding to the service needs of oil sands producers. Keyera expanded its service offerings to include solvent and sulphur handling services, as well as dilbit, bitumen and crude oil rail transportation services. Keyera’s infrastructure in the Edmonton/Fort Saskatchewan area and at the South Cheecham Terminal are well-situated to provide these and other services related to oil sands development.

Fort Saskatchewan Condensate System (“FSCS”) and associated Condensate Infrastructure: An important development in providing services to the oil sands sector is the development of FSCS and Keyera’s overall condensate system. Keyera’s condensate system provides shippers with critical condensate transportation options between Edmonton and Fort Saskatchewan and access to multiple sources of diluent supply as well as to Keyera’s condensate storage.

The original FSCS pipeline system included a 21-kilometre, 20-inch pipeline connecting Keyera's Fort Saskatchewan Pipeline system with Inter Pipeline Ltd.'s Polaris pipeline, and a pipeline connection from Keyera's Edmonton Terminal to the Enbridge Southern Lights pipeline. Since the original pipelines were constructed, Keyera continued to expand and enhance the system, which now has:

- (a) four condensate storage tanks at the Edmonton Terminal, each with a working capacity of approximately 66,000 Bbls;
- (b) supply connectivity to all local fractionation facilities;
- (c) direct connections to Pembina Pipeline Corporation's Cochin pipeline and Canadian Diluent Hub, Enbridge's Southern Lights pipeline and CRW pool and the North West Sturgeon Refinery;
- (d) a 24-inch condensate pipeline extension and manifold, connecting Keyera's condensate network to the Norlite pipeline;
- (e) connectivity to the South Grand Rapids pipeline; and
- (f) connectivity to the Access Pipeline and Cold Lake Diluent Pipeline.

Most of the services provided by Keyera on FSCS are under long-term take-or-pay, fee-for-service diluent handling agreements.

Norlite Pipeline: Keyera is a 30% non-operating owner of the Norlite pipeline. The 446-kilometre, 24-inch Norlite pipeline is underpinned by a long-term take-or-pay diluent handling agreement to serve the Fort Hills oil sands project, and additional long term, take-or-pay agreements with additional customers have been executed for diluent transportation services on Norlite and FSCS. The Norlite pipeline has approximately 242,000 Bbls/d of gross condensate transportation capacity that can be further expanded to 465,000 Bbls/d.

South Grand Rapids Pipeline: This 45-kilometre, 20-inch diluent pipeline extends from Keyera's Edmonton Terminal to TC Energy's Heartland Terminal near Fort Saskatchewan. As part of this project, Keyera also constructed a pump station at its Edmonton Terminal. The pipeline provides Keyera with proprietary access to at least 225,000 Bbls/d of net diluent transportation capacity between Edmonton and Fort Saskatchewan.

South Cheecham Terminal: This rail and truck terminal is a Keyera-operated 50/50 joint venture with Enbridge near Fort McMurray. The terminal provides condensate and dilbit handling services to oil sands producers along with solvent handling services. In 2019, Keyera entered into a long-term, take-or-pay arrangement to provide sulphur handling services to a customer, and is constructing additional facilities on site to support the sulphur handling business. Commissioning of the sulphur facilities were progressing at the end of 2022 and the facility is expected to be operational in the first quarter of 2023.

Base Line Terminal: The Base Line Terminal is an above ground crude oil storage facility on land at Keyera's AEF site in Edmonton. The terminal is a 50/50 joint venture with Pembina Pipeline Corporation, which includes 12 tanks with a total storage capacity of 4.8 million Bbls.

Alberta Diluent Terminal ("ADT"): The Alberta Diluent Terminal is a multi commodity facility handling condensate, crude oil, solvent and iso-octane. The facility is connected to many of Keyera's other facilities and also has rail connection to both the Canadian National Railway, and the Canadian Pacific Railway. In 2022, Keyera consolidated all commercial

and operational matters in the Alberta Crude Terminal into the ADT after acquiring the remaining 50 percent ownership interest in the Alberta Crude Terminal in 2021.

3. AEF and Iso-octane Initiatives

Since acquiring AEF, Keyera continues to pursue opportunities to optimize iso-octane production at AEF and develop transportation alternatives, including adding iso-octane rail loading capability at the Edmonton Terminal and the ADT and adding truck loading on-site at AEF. These initiatives provide Keyera further flexibility to serve North American and local markets. In addition, Keyera contracts storage capacity at Kinder Morgan's Galena Park rail, storage and marine facility in the U.S. Gulf Coast to assist in managing inventory to meet iso-octane demand from refiners and gasoline blenders in that region.

To further improve its marketing flexibility, in the first quarter of 2020, Keyera completed pipeline and terminal modifications at the ADT site to accommodate the handling of iso-octane. This site has certain advantages over Keyera's Edmonton Terminal because it has available above ground tank storage and rail connectivity to both CN and CP railways. Since its completion in early 2020, the majority of Keyera's iso-octane is shipped from ADT.

Regular maintenance turnarounds for this facility are scheduled every four years and are a key aspect of Keyera's commitment to safe, efficient and reliable operations over the long term. Preventative maintenance on the AEF facility was completed in the fourth quarter of 2020. As a result, the turnaround originally scheduled for 2021 was deferred to, and completed in the fourth quarter of, 2022. The next scheduled turnaround for AEF is in 2026.

4. U.S. Liquids Hubs

Oklahoma Liquids Terminal: This logistics and liquids blending terminal located near Tulsa, Oklahoma receives, blends and delivers diluent, the majority of which is transported by pipeline from the Mont Belvieu, Texas area to the Chicago area and ultimately into the Alberta markets.

Wildhorse Terminal: Construction of the Wildhorse Terminal, a crude oil storage and blending facility in Cushing, Oklahoma, was completed and the Terminal commenced operations in July 2021. The terminal includes 12 above ground tanks with 4.5 million Bbls of working storage capacity. The majority of the capacity is backed by fee-for-service, take-or-pay storage arrangements. The Wildhorse Terminal is pipeline connected to two existing storage terminals at Cushing. These connections will provide customers with access to the majority of the crude oil streams flowing in and out of Cushing on several major pipeline networks. KEI is a 90% owner in, and operator of, the Wildhorse Terminal. The remaining 10% is owned by an affiliate of Lama Energy Group.

Galena Park Terminal: Keyera entered into commercial arrangements with an affiliate of Kinder Morgan to provide butane on demand gasoline blending services at Kinder Morgan's Galena Park Terminal in the Houston ship channel. Commercial service commenced in November 2020. Keyera ships a significant amount of iso-octane to the same terminal and, as a result, is able to provide customers with both iso-octane and butane blending options.

Disposition of the Hull Terminal and Pipeline System: On January 14, 2022, KEI, Keyera's U.S. subsidiary, disposed of the Hull Terminal (a truck and rail terminal located in Hull, Texas).

Liquids Infrastructure Business Arrangements

A significant proportion of services provided through the Liquids Infrastructure business is to Keyera's Marketing business, including all of the services provided by AEF and the Oklahoma Liquids Terminal. Keyera's Marketing business pays market rates for the services it utilizes.

In addition to these internal transactions, Keyera also contracts with third-party customers on a fee-for-service basis for services such as transportation, de-ethanization, fractionation, processing, storage, and terminalling. Such contracts outline the services to be provided, the terms and conditions relating to the provision of such services and the associated fee structure. The term of these contracts varies widely. For example, some diluent handling agreements, product exchange service agreements and tank storage agreements are long term in nature, while other NGL agreements can be long term or as short as one year. The longer term agreements are often entered into in connection with the underpinning of significant capital projects. The majority of customers who contract for service on Keyera's condensate system are third parties who entered into long term, take-or-pay, fee-for-service agreements. See "Risk Factors – Operational Risks – Reliance on Principal Customers and Suppliers".

The fee structures for these contracts also vary widely. The contracts may include both fixed and interruptible service terms, volumetric tariffs, rate of return components, take-or-pay components and/or flow through of certain costs. The services may be provided using a combination of proprietary Keyera assets and joint venture assets, which also affects some cost and revenue allocations.

Marketing Business Segment

Description of Marketing Business

The Marketing business is focused on the purchase and sale of products associated with Keyera's facilities, including NGLs, crude oil and iso-octane. The majority of NGL supply is purchased through long-term contracts. One-year term supply agreements make up the balance. Depending on the terms of the agreements, NGL volumes can be purchased at the gas plant-gate, storage facilities, truck and rail terminals or in NGL gathering pipelines. The NGL mix acquired by Keyera is fractionated into specification products at Keyera's facilities or, in some instances, at third-party facilities. The main specification NGLs that Keyera markets are propane, butane and condensate. Propane is generally used for heating, butane is mainly used as feedstock for the production of iso-octane and in gasoline blending, and condensate is largely used as a diluent to enable heavy crude oil and bitumen to flow in pipelines.

Keyera negotiates sales contracts with customers in Canada and the U.S. based on volumes it contracts to purchase. In the case of condensate sales, the majority of the product is sold to customers in Alberta shortly after it is purchased. Butane is used as the primary feedstock in the production of iso-octane at Keyera's AEF facility, and therefore a significant portion of the contracted butane supply is retained for Keyera's own use, and the balance is generally sold into the Alberta market shortly after it is purchased. Keyera will purchase and hold seasonally priced inventory within its NGL storage caverns to ensure cost effectiveness and assurance of supply for the production of iso-octane.

Propane markets, in contrast, are more seasonal and geographically diverse. Keyera sells propane in various North American markets, often where the only delivery option is rail or truck. Keyera is well-positioned to serve these markets due to its extensive infrastructure and rail logistics expertise. Further, because demand for propane is typically higher in the winter, Keyera can utilize its NGL storage to build an inventory of propane during the summer months when prices are typically lower to fulfill winter term sales commitments.

Overall, the integration of Keyera's business lines means its Marketing segment can draw on the resources available to it through Keyera's facilities-based operating segments (Liquids Infrastructure and Gathering and Processing), including access to NGL supply and key fractionation, storage and transportation infrastructure and logistics expertise. The acquisitions and growth initiatives in Keyera's

facilities businesses contribute to the opportunities available to its Marketing business and to the diversification of Keyera's product offerings, sources of supply, customer base and geographic market options.

In total, Keyera marketed an average of 179,100 Bbls/d of NGLs and iso-octane in 2022, compared to an average of 167,200 Bbls/d in 2021. Keyera monitors global and North American supply/demand and pricing trends, which informs its purchasing, sales and hedging strategies.

Keyera manages its supply and sales portfolio by monitoring its inventory position and its purchase and sale commitments. Nevertheless, the Marketing business is exposed to commodity price fluctuations arising between the time contracted volumes are purchased and the time they are sold, as well as pricing differentials between geographic regions. These risks are managed by purchasing and selling product at prices based on same or similar indices or benchmarks, and through physical and financial contracts that include energy-related forward sales, price swaps, forward currency contracts and other hedging instruments. Notwithstanding the strategies Keyera adopts to try to manage price and volume risk, the Marketing segment's margins for NGLs may vary significantly from period to period. There is also inherent risk in the use of financial contracts as a risk management tool, as these contracts cannot be perfectly matched to physical inventory and sales and there is no guarantee that the relationship between the products will be sustained. See "Risk Factors – Financial Risks – Market Risk and Marketing Activities".

Keyera's primary markets for iso-octane are Western Canada, the Midwestern U.S. and the U.S. Gulf Coast. The development and expansion of iso-octane rail loading facilities at the Edmonton Terminal and ADT and the truck loading facilities at AEF allow Keyera to leverage its rail, logistics and marketing expertise to meet delivery requirements. These rail capabilities, together with the iso-octane storage capacity that Keyera secured at the Kinder Morgan Galena Park facility, allowed it to access Gulf Coast and U.S. inland markets. The Liquids Infrastructure segment charges Keyera's Marketing segment a fee for processing services related to the production of iso-octane and therefore all revenues attributed to AEF within the Liquids Infrastructure segment relate to the fees paid by the Marketing business. See "Liquids Infrastructure Business Segment".

The primary feedstock to make iso-octane is butane. Under typical operating conditions at full utilization, AEF requires approximately 1.4 Bbls of butane to produce 1 Bbl of iso-octane. Iso-octane margins are based on the price of butane, which generally trades at a discount to WTI, and the price of iso-octane, which generally sells at a premium over RBOB (the gasoline market) which typically sells at a premium to WTI. As a result, there can be significant seasonality in iso-octane margins. As with Keyera's other Marketing segment activities, Keyera uses various risk management strategies to seek to mitigate risks associated with commodity exposure, including the use of financial contracts. However, the success of such strategies is dependent upon, among other things, the sustainability of the relationship between products. See "Risk Factors – Financial Risks – Market Risk and Marketing Activities".

In its NGL blending activities, Keyera operates facilities at locations in Alberta and Oklahoma that allow it to process, transport and blend various product streams. Liquids blending margins are earned by blending products of lower value into higher value product streams. As a result, these transactions are exposed to volatility in price differentials between the various product streams. Keyera manages this risk exposure by trying to balance its purchases and sales and locking in margins. Notwithstanding Keyera's management of price and quality risk, the Marketing segment's margins for its NGL blending business can vary significantly from period to period. See "Risk Factors – Financial Risks – Market Risk and Marketing Activities". In addition, Keyera's ability to engage in NGL blending activities is affected by competition for blending opportunities, the ability to secure access to various product streams, and limitations associated with facility and pipeline specifications. See "Risk Factors – Operational Risks – Reliance on Principal Customers and Suppliers" and "Risk Factors – Operational Risks – Reliance on Other Facilities and Third-party Services".

In 2022, Keyera's Marketing business accounted for 82% of Keyera's total revenues (without elimination of inter-segment transactions), 35% of Keyera's total operating margin and 35% of Keyera's total realized margin, compared to 78% of total revenues, 30% of operating margin and 31% of total realized

margin in 2021. Keyera's Marketing business pays fees, at market rates, to Keyera's Liquids Infrastructure and Gathering and Processing businesses for the use of facilities. Keyera believes operating margin and realized margin provide an accurate portrayal of operating profitability by business segment.

Marketing Contractual Arrangements

In Keyera's Marketing business, Keyera enters into purchase and sale agreements primarily for NGLs and crude oil. It also enters into sales agreements for iso-octane. These purchase and sale agreements are typically priced relative to market indices. Generally, term pricing for NGL supply contracts are for one year, commencing April 1st and set out negotiated pricing levels in relation to indices for the following twelve months. However, Keyera may also enter into longer-term supply arrangements, and may make purchases on the spot market as well. As part of managing its inventory and commodity price risk, Keyera also enters into financial and physical hedging contracts in accordance with its risk management policy. For further details on the contractual arrangements in Keyera's Marketing business, see the 2022 Financial Statements and accompanying management's discussion and analysis available on SEDAR at www.sedar.com.

Commodity Risk Management

Keyera manages commodity risk in a number of ways, including the use of financial and physical contracts and by offsetting some physical and financial contracts in terms of volumes, timing of performance and delivery obligations. Keyera's risk management strategy utilizes the following hedging strategies:

- (a) Butane and Condensate – Because butane and condensate prices are often based on the price of crude oil, crude oil financial contracts are common hedging strategies that Keyera uses for these products. This hedging strategy is subject to basis risk between crude oil and the condensate or butane being hedged and therefore cannot be expected to perfectly offset future butane and condensate price movements.
- (b) Propane – For several years, Keyera used propane physical and financial contracts to hedge its propane inventory. Although propane contracts are expected to eliminate some commodity basis risk, they may be exposed to geographic basis risk (depending on the contract terms), plus the ability to enter into propane contracts may not be as available as other more liquid financial contracts, such as those for crude oil.
- (c) Iso-octane – Keyera's hedging objective for iso-octane is to secure attractive margins and mitigate the effect of iso-octane price fluctuations on its future operating margins. The sales price for iso-octane is largely based upon the price of motor gasoline or RBOB. RBOB is the highest volume refined product sold in the U.S. It also has the most liquid forward financial contracts. Accordingly, Keyera expects to continue to utilize WTI and RBOB financial contracts to hedge its iso-octane sales.

As the NGL and iso-octane markets evolve during the year, Keyera monitors and adjusts its hedging strategy to protect the value of its inventory and future operating margins.

Employees and Labour Relations

As of December 31, 2022, Keyera employed approximately 1,098 permanent employees in its operations. Approximately 54 employees at the Rimbey gas plant are represented by Gas and Oil Union Local 504, and approximately 24 employees employed by Keyera at the Strachan gas plant are represented by Gas and Oil Union Local 507. The Rimbey and Strachan unions are separate bargaining units and are not associated with any national or international union. The collective agreements for hourly employees at the Strachan gas plant and the Rimbey gas plant expire on December 31, 2023. To date, Keyera has never experienced a labour-related work stoppage at any of its facilities. See "Risk Factors – Operational Risks – Employees and Contractors".

In 2022, Keyera was again recognized as a top employer in Alberta – a standing it has held for the last eleven years. Keyera values the engagement and retention of its employees. Professional development and succession planning programs are provided for employees throughout the organization. In 2023, Keyera will focus on leadership development, succession, diversity, equity and inclusion. Keyera is also focused on enhancing employee engagement and its ability to attract and retain key talent.

Training and Development Programs

A competent and skilled workforce is one of the most effective ways to promote safe, efficient and reliable operations. Keyera has been a leader in this area through its Competence Management and Development System (“**CMDS**”). This competency-based training system features comprehensive training that can be customized to suit worker profiles and involves both self-assessments and supervisor validation of competencies. In addition to providing training to its own workers, Keyera’s CMDS system has become an industry-wide training tool, with many other oil and gas companies subscribing to the service.

Keyera has also implemented a comprehensive leadership development program which provides leadership training and coaching opportunities for its current and emerging leaders. It also has a comprehensive executive leadership development and succession planning program underway.

Diversity, Equity and Inclusion

In 2022, Keyera continued to progress its diversity, equity and inclusion (“**DEI**”) program, by approving a strategy and plan which included training sessions on topics such as fostering an inclusive culture, overcoming personal biases, understanding micro aggressions and seeking out diverse perspectives. Additionally, Keyera has developed succession processes to track and progress diverse candidates in leadership roles and enhancements have been made to its Canadian parental leave policy which address evolving needs of parents of newborn children within the organization.

Foreign Markets and Operations

As part of its NGL and iso-octane marketing activities, Keyera markets NGLs and iso-octane in the U.S. and imports certain NGLs from the U.S. These marketing activities are conducted through Keyera’s U.S. subsidiary, KEI, which has an office in Houston, Texas. Keyera’s Marketing business can be affected by trends in the U.S. due to the fact that commodity prices, including NGLs and iso-octane, in Canada are influenced by pricing, foreign exchange rates and markets in the U.S. KEI owns and operates the Wildhorse Terminal and the Oklahoma Liquids Terminal in Oklahoma. Additionally, Keyera has a long-term agreement with Kinder Morgan to provide butane to Kinder Morgan’s Galena Park facility associated with its butane-on-demand blending system. KEI has entered into contractual arrangements that provide it with terminalling and storage capacity in Texas and Kansas and is evaluating other opportunities in the U.S. Keyera also loads rail cars which deliver product to Mexico. See “Risk Factors – Operational Risks – Geographical Operational Risks”.

Competition

The midstream oil and gas industry is highly competitive in all aspects, including the gathering, processing, fractionation, storage, transportation, and marketing of hydrocarbon products. Each of Keyera’s gas processing plants is subject to competition from other gas processing plants which are either in the same general vicinity or have gathering systems that are or could potentially extend into geographic regions served by Keyera’s facilities. As well, Keyera’s NGL pipelines, storage, terminal and processing facilities are subject to competition from other existing pipelines and facilities, which competition is anticipated to continue to grow as other companies announce plans for expanded NGL processing, fractionation, transportation, terminalling and storage services in the Edmonton/Fort Saskatchewan hub, as well as other interconnected geographic areas in western Canada and the U.S.

NGL and crude oil commodities that are marketed by Keyera compete with supplies from Canadian, U.S., and international sources. Keyera competes with local and international entities to acquire NGLs for processing and resale and to attract and retain customers. Competition for customers is not confined to NGL suppliers and marketers. The natural gas and gas products industry also competes with other industries seeking to provide substitute products or alternative sources of fuel, gasoline blending products, diluents, and feedstock to consumers. For example, in the iso-octane marketing business, alkylate is a common alternative competitive product. Alkylate is typically produced by reacting isobutane with refinery olefins in the presence of an acid catalyst to produce a relatively high octane gasoline component. Most North American refineries have some alkylate production capabilities.

Recent consolidation trends in the traditional hydrocarbon energy sector may have an impact on the competitive landscape as companies increase scale and work to optimize infrastructure and marketing opportunities from consolidated asset bases.

As momentum around the energy transition continues to unfold, Keyera expects that it will provide a new suite of opportunities as it relates to services that can be provided for businesses focused on renewable energy, hydrogen, petrochemicals, power (electrification) and carbon capture use and sequestration (CCUS). The emergence of energy transition opportunities has expanded the competitive landscape as energy companies and private capital compete to build out this space over the coming decades. Further, competition from non-hydrocarbon renewable based energy sources may have an adverse effect on the production of hydrocarbon products and, as a result, on the demand for Keyera's services. See "Risk Factors – Operational Risks – Competition".

ENVIRONMENTAL, SOCIAL AND GOVERNANCE MATTERS

Overview

Keyera recognizes the importance of strong corporate governance, as well as a commitment to environmental protection and social responsibility as integral parts of its business. Keyera is committed to conducting its business in a way that respects the environment, creates mutually beneficial relationships with its stakeholders and focuses on the health and safety of Keyera's employees and the communities in which it operates. These commitments are described in Keyera's Health, Safety and Environment Policy, the 2021 ESG Report (as defined below) and the 2021 Climate Report (as defined below).

Keyera conducted a comprehensive materiality assessment in 2020 that identified six ESG priority areas: safety; people and culture; emissions; community and Indigenous engagement; water; and land and biodiversity. In addition to the matters discussed below, in September 2022, Keyera published its 2021 environmental, social and governance report ("**2021 ESG Report**"), which elaborates on Keyera's six ESG priorities. In the 2021 ESG Report, Keyera advised that it had achieved a 12% emission intensity reduction relative to its 2019 benchmark driven largely by optimization efforts in its Gathering and Processing business segment, increased industry activity and certain investments in operational emissions efficiencies. Keyera's 2021 ESG Report aligns to guidance set out by the Sustainability Accounting Standards Board (SASB) and the International Petroleum Industry Environmental Conservation Association (IPIECA) for metrics and topics likely to have a material impact on the financial and operational performance of midstream energy companies.

In 2021, Keyera released its inaugural Climate Report ("**2021 Climate Report**"), which provides an overview of Keyera's climate strategy, board governance framework, and risk management approach to climate-related issues. It also established greenhouse gas emissions targets and describes Keyera's approach to identifying and capitalizing on opportunities anticipated to arise as part of the energy transition. This report follows recommendations from the Task Force on Climate-Related Financial Disclosures (TCFD).

Copies of Keyera's 2021 Climate Report, 2021 ESG Report and Health, Safety and Environment Policy are available on Keyera's website at www.keyera.com. See "Environmental, Social and Governance Matters – Environmental Stewardship – Greenhouse Gas and Energy Transition Strategy".

ESG Governance

Structured oversight of material ESG-related issues is integral to the Board's stewardship of Keyera's strategy and maintaining long-term corporate resilience. The Board is responsible for monitoring Keyera's approach to sustainability and ESG matters, including ensuring appropriate systems are in place to identify, track, and report on Keyera's performance.

In respect of its oversight responsibilities, the Board is assisted by its three standing committees, including the Health, Safety and Environment ("HSE") Committee. The HSE Committee oversees Keyera's workplace health and safety program, environmental stewardship practices, emission performance and reporting, water management, land management programs, reclamation, asset retirement obligations, as well as related regulatory compliance and reporting. Environmental and regulatory performance and updates are delivered to both the HSE Committee and to the Board as a whole on a quarterly basis.

In 2021, the Board approved changes to its committee structure to enhance its oversight of ESG and climate-related issues. In 2022, a new Governance and Sustainability Committee ("**GSC**") was established to assist the Board to oversee climate-related risks and opportunities, stakeholder engagement performance, ESG strategy and performance, as well as assess and oversee its corporate governance practices and related disclosures.

Health and Safety Programs

Keyera is committed to conducting its operations in a manner that protects the health and safety of the public and the people who work at its facilities. Keyera has a highly skilled workforce and provides ongoing training to maintain the skills and understanding necessary for a safe and healthy work environment. Keyera has developed an industry-leading CMDS to assess and track the competency of its workers. See "Business of Keyera – Training and Development Programs". Keyera's Health, Safety and Environmental Policy sets an expectation that everyone must share in the responsibility to work safely and responsibly, while meeting or exceeding all laws and regulations. Keyera's objective to deliver #1 in Safety Performance is governed by its four Safety Pillars:

- Prescribing Safety Expectations: Keyera explicitly mandates expectations that are focused on reducing risk and preventing incidents, particularly repeat incidents.
- Critical Task Excellence: Keyera has identified the tasks that present the greatest level of risk and have specific expectations on how that work is planned and executed.
- Visible Safety Leadership: Keyera expects its leaders to be engaged with safety related activities with the frontline, creating the opportunity to both give and receive feedback, particularly with work that includes Critical Tasks.
- Enhanced Accountability: Keyera takes personal ownership of safety, holding ourselves and others accountable to use risk mitigation systems and processes such as Safe Operating Practices and Hazard Assessments.

Equally important to personal safety is process safety. Process safety focuses on preventing releases of hazardous material or energy that could result in significant harm to people and the environment. In 2021, to enhance focus on process safety, Keyera established an internal team and developed a process safety management strategy. This team works with Keyera's operations and project teams to anticipate, manage, and control process safety risks, including creating and monitoring barriers and controls that prevent incidents from occurring.

Keyera regularly reviews its safety performance, conducts safety audits and shares experiences and best practices within the organization, including at its annual Safety Symposium and safety bulletins, and, at times, with the industry. Keyera's health and safety activities are reviewed monthly by the executive team and reviewed quarterly by the Health, Safety and Environment Committee of the Board and the entire Board of Directors.

Operational Excellence

Safety is embedded into the day-to-day work and management of Keyera operations through use of its Operational Excellence Management System (“**OEMS**”). The OEMS is a comprehensive framework that proactively identifies and mitigates risks through a systematic approach to continuous improvement. It ensures procedures for safe operating practices, hazard assessments, document control, and maintenance protocols are consistently applied. To ensure it effectively manages risk at each stage of project development, Keyera’s OEMS has been integrated into its project delivery system, with an enhanced focus on process safety.

Pipeline and Facility Integrity Management

Keyera is committed to maintaining the integrity of all its pipeline and facility assets. This commitment is integral to Keyera’s business strategy of operating safely, reliably, and preserving the longevity of its assets. Keyera’s integrity management programs apply to pipelines and facility pressure equipment and are developed having regard for accepted industry practices and the applicable regulations and standards which govern the design and operation of these assets.

Through adherence to internal standards and its integrity management programs, Keyera continuously strives to minimize the likelihood of incidents and operational downtime, while safeguarding personnel, the environment, and the communities in which it operates.

Keyera’s integrity management programs apply throughout the asset lifecycle, from its initial design through asset retirement. Each program is founded on a process involving identification of hazards that may impact long term integrity of the asset and assessment of risk, establishing plans and activities to mitigate that risk, application of the mitigation under the plan, monitoring the performance of the program and managing change.

Keyera provides training for its personnel responsible for design and ongoing management of its integrity management programs through its CMDS and third-party provided training. Keyera personnel are also members of industry committees and associations and attend industry conferences.

Pipeline Integrity

Keyera has a total of over 4,140 kilometres of pipelines in Alberta and Oklahoma. This includes the new KAPS pipeline system which Keyera expects will be operational in the second quarter of 2023. Key elements of the pipeline integrity program include the development and application of specifications and standards for the design of new pipelines; reviewing pipeline operations by system, which includes conducting risk assessments to identify inspection and risk mitigation activities; and measurement of compliance against the integrity management plan.

Some of the key pipeline integrity activities include internal and external corrosion control, inspection of water crossings and slopes, and right-of-way surveillance to minimize the risk of third-party damage. In addition, Keyera’s risk assessment processes prioritize important in-line inspection and repair projects. Approximately 27 in-line inspection projects are planned for 2023.

Facility Integrity

Keyera maintains over 12,000 pressure equipment assets associated with its facilities. Facility integrity programs apply a lifecycle approach to ensure pressure equipment is designed, constructed, installed, commissioned, operated, maintained, decommissioned and managed in a manner that reduces any potential loss of containment, provides worker safety and protects the environment.

Keyera intends to incorporate a risk-based inspection program to increase safety, reliability, and uptime of its processing facilities.

Turnarounds at its facilities are planned and executed with the objective of maintaining integrity of pressure equipment, pressure safety valves, piping and tanks, and at the same time complying with jurisdictional requirements, industry best practices and the requirements of its Owner/User integrity management programs.

Environmental Stewardship

Keyera values the importance of responsible environmental stewardship. Keyera's Health, Safety, and Environment Policy sets the expectation that everyone – including employees, directors, contractors and suppliers – is committed to environmental protection, mitigation, and restoration as an integral part of Keyera's business, and that everyone take steps to reduce the impact of Keyera's activities on the environment.

Keyera's OEMS standards and processes evaluate, mitigate and manage environmental risks. As part of this approach, Keyera implemented a suite of water, soil, waste, and air programs that help identify and prevent environmental impacts and provide a roadmap for decision making. Systems are in place to monitor and report on a range of environmental and regulatory performance metrics which are used to evaluate performance and identify opportunities for improvement. Keyera also provides employees with training on environmental matters relevant to specific roles.

Keyera has made significant investments to improve efficiency and environmental performance. In 2020, Keyera entered into a 15-year solar power purchase agreement (the "**PPA**"). Under the PPA, Keyera will be the sole purchaser of renewable energy produced by a 25-megawatt capacity solar generation facility located in Drumheller, Alberta, and operated by Capstone Infrastructure Corporation (previously Samsung Renewable Energy Inc.). In 2021, Keyera completed its Gathering and Processing optimization program which helped reduce greenhouse gas emissions by approximately 13% relative to 2019. In October 2022, Keyera entered into a 15-year agreement with TC Energy, beginning in January 2025, to purchase 20 mega-watt per hour of firm carbon free energy through a virtual PPA. Power will be generated through a combination of wind and solar generation with hydro pumping storage providing firming capacity during periods of low renewable generation.

Environment Planning and Liability Management.

Effective land management practices enable Keyera to mitigate impacts of its activities, fulfill its obligations to Keyera stakeholders, and anticipate regulatory or other changes. Keyera is committed to minimizing the impact of its activities on the environment, during development, operation and decommissioning.

Keyera uses a proactive, risk-based approach to environmental management planning and liability management based on the following principles:

- emphasizing the importance of up-front planning of projects, considering the potential environmental impacts, including to soil, wildlife, water and air;
- mitigation and monitoring of any potential adverse affect during construction or operation;
- diligence to integrity and release prevention;
- maintenance of information related to land footprint and a liability management framework with an intentional strategy for managing them;
- drawing on technical expertise, data collection and detailed delineation to provide a solid foundation for program planning;
- utilizing a defined implementation process to improve or maintain environment quality and align with regulatory programs;

- applying a life-cycle approach to recognize best practices and pursue efficiency in coordinating planning and execution⁷;
- moving inactive sites through to closure in a comprehensive and timely manner; and
- maintaining flexibility to adjust based on corporate priorities and overall business strategy.

Environmental risk prevention also relies on having robust and effective Integrity Management Systems to minimize potential spills and other biodiversity-related disturbances. These are described in section “Environmental, Social and Governance Matters – Pipeline and Facility Integrity Management” above.

Liability Management

Keyera’s liability management program focuses on enhancing its environmental monitoring and management programs, developing appropriate site-specific risk mitigation programs, and addressing historical environmental impacts. Keyera engages in a comprehensive suite of regular monitoring programs completed on an annual basis. Keyera also continues to refine its liability management system, a program which applies a risk ranking approach, combined with other criteria, to prioritize annual decommissioning, abandonment, remediation and reclamation projects. Program results are regularly reported to Keyera management and to the Health, Safety and Environment Committee of the Board. Keyera management also reviews and approves a liability management program budget annually.

Keyera has participated in a limited benchmarking initiative in respect of its liability management program to provide additional context to assist in assessing cost effectiveness. See “Decommissioning, Abandonment, Remediation and Reclamation Programs and Costs” below.

Decommissioning, Abandonment, Remediation and Reclamation Programs and Costs

Keyera incurs certain decommissioning, abandonment, remediation and reclamation costs each year in connection with facility, well, pipeline and other physical asset components of its active operations. These costs can include items such as groundwater remediation programs, soil remediation, well suspension and removal of unutilized equipment or hazardous materials, all of which help Keyera assess and proactively manage its environmental liabilities. These costs may be included as part of the operating expenses of the respective facilities where the work is undertaken, in which case they can be recovered from customers as part of the operating fee charged where flow-through-operating-cost fee structures are in place. This treatment of current environmental costs does not, however, provide for recovery of end-of-life costs expected after a facility is permanently decommissioned. See “Risk Factors – Financial Risks – Decommissioning, Abandonment and Reclamation Costs” and “Risk Factors – Operational Risks – Environmental and Public Safety Regulation and Considerations”.

End-of-life costs are accounted for through Keyera’s financial obligations and are reflected in its financial statements. Keyera makes provision for the future cost of its decommissioning costs measured at the present value of Keyera’s best estimate of the cost to settle the obligation, utilizing a credit-adjusted risk-free rate as permitted by accounting standards. While the provision is based on the best estimate of future costs and the economic lives of the facilities, there is uncertainty in the amount and timing of these costs. For further information refer to the 2022 Financial Statements and associated management’s discussion and analysis available on SEDAR at www.sedar.com.

In determining its decommissioning cost estimates, Keyera considers: (i) the cost of facility abandonment, including suspension and demolition costs, and (ii) environmental restoration, remediation and reclamation costs, in order to return the site to an equivalent surrounding land-use state. Keyera engages reputable third-party environmental consultants and experienced employees to collect, review and

⁷ See also Keyera’s 2021 ESG Report, at page 56 for additional details on Keyera’s environmental management through the project lifecycle, available on its website at www.keyera.com.

assess the relevant data in preparation of the estimates. It is difficult to predict decommissioning costs with certainty because they are a function of regulatory requirements and other factors in effect at the time of decommissioning, abandonment and/or reclamation.

To support its facility estimates, Keyera completed site-specific liability assessments for many of its assets, including all sour gas plants. Keyera complies with the liability assessment requirements in AER Directive 001 – Requirements for Site-Specific Liability Assessments (“**SSLA**”), AER’s License Liability Rating Program and Management Plan, and AER Directive 024 – Large Facility Liability Management Program, including completing updated assessments every five years for those facilities that are subject to AER Directive 001. Other assessments are reviewed periodically and updated as necessary. The results of the SSLA assessments are leveraged for development of decommissioning liability estimates.

Other decommissioning costs are regularly evaluated and updated and may be based on Keyera’s assessment based on experiences during operational suspension for turnarounds, acquisition estimates, analogues from similar sites and/or construction costs. Well abandonment estimates are provided by industry experts, based on actual and industry downhole abandonment historical cost expenditures, professional judgment and experience. The process is overseen by the Health, Safety and Environment Committee of the Board.

Keyera’s Alberta operations are also subject to several programs designed to mitigate the cost to the public of abandoning and reclaiming facilities under the jurisdiction of the AER. Pursuant to a program commonly referred to as the “Orphan Well Fund”, holders of AER licenses for wells and facilities are required to pay an annual levy to assist in funding the clean-up of orphan sites. The levy is treated as an operating cost. In addition, the AER requires all licensees to provide data to support a Licensee Capability Assessment, including financial statements and demonstration of liability closure activity. Licensees that are flagged as “high risk operators” may be required to provide the AER with a security deposit. As of the date hereof, Keyera has not been required to provide a security deposit.

British Columbia has a Liability Management program similar to Alberta that applies to midstream operators, such as Keyera. Given that operations at the Caribou gas plant were suspended in December 2015, Keyera posted security under this program to secure the end-of-life liability associated with the plant.

Greenhouse Gas and Energy Transition Strategy

In 2022, Keyera’s management and Board continued to advance the integration of climate-related risks and opportunities into corporate strategy, risk management processes, and capital investment frameworks. These advancements support Keyera’s approach to planning for the energy transition by seeking to lower both emissions and operating costs from Keyera’s base operations, while pursuing strategic, lower-carbon commercial opportunities. Keyera intends to continue to reduce emissions from base operations by pursuing operational efficiencies, optimizing the utilization of its assets, investing in technology and exploring the use of carbon capture, utilization, and storage (CCUS) in its operations. With regards to pursuing energy transition opportunities, Keyera is exploring low-carbon services and new business models that leverage its existing asset base, core competencies, and strong customer relationships.

In support of Keyera’s commitment to reduce emissions and encourage meaningful participation in the energy transition, Keyera’s management and Board established GHG targets in 2021. Using 2019 as the baseline year, Keyera committed to reducing its emissions intensity by 25% by 2025 and by 50% by 2035. The short-term target is expected to be met through planned commercially-viable investments, including the completion of Gathering & Processing optimization efforts, technology deployments, and anticipated start-up of existing lower emissions-intensity assets. The longer-term target is intended to focus efforts and incentivize future strategic decision-making that enable Keyera to successfully advance its participation in the energy transition. By the end of 2021, Keyera had reduced its emissions intensity by approximately 12 percent from its 2019 baseline.

To support the execution of Keyera’s energy transition plan and steady growth of Keyera’s business, Keyera established comprehensive emissions modelling and a capital investment decision framework that guides the evaluation of opportunities and capital allocation decision making. Acquisitions, divestitures, and major projects/products/service offerings undergo a comprehensive screening against this framework. The screening process is designed to ensure Keyera remains focused on core strategic elements, properly evaluates financial impact and risk, and continues to align with its ESG priorities.

Keyera has also taken steps to support decarbonization of its operations. In 2021, it completed a targeted optimization of its Gathering and Processing assets, which involved consolidating five existing facilities and redirecting their gas volumes to more efficient facilities. These efforts enhanced the utilization of Keyera’s remaining facilities by 50 to 65 percent, lowered per unit operating costs, and reduced absolute emissions by 13 percent, compared to Keyera’s 2019 baseline emissions. Keyera is also piloting new technology which uses calibrated sensors and artificial intelligence to improve how it identifies and repairs methane and other leaks.

Keyera is also exploring efforts to support the development of a low-carbon hub in Alberta’s Industrial Heartland including low-carbon feedstock, pipelines, rail and truck logistics, and storage. In 2022, Keyera entered into memorandums of understanding with both Shell Canada and CN to evaluate potential opportunities to collaborate on potential low-carbon projects in the region.

For further information on Keyera’s GHG reduction strategy, refer to the 2021 Climate Report at www.keyera.com. See “Risk Factors – Operational Risks – Climate Change, Carbon Tax and the Transition to a Lower Carbon Economy”, “Risk Factors – Operational Risks – Greenhouse Gas Emissions and Targets”, “Risk Factors – Operational Risks – Changing Expectations from Stakeholders”, “Risk Factors – Operational Risks – Change in Laws”, “Risk Factors – Operational Risks – Weather Conditions”, “Risk Factors – Operational Risks – Reputational Risk”, and “Risk Factors – Financial Risks – Environmental Compliance and Remediation Costs”.

Community Engagement

Strong relationships are built on trust, understanding, and respect. It is only by listening, learning, and sharing that Keyera can have meaningful dialogue and create mutually beneficial opportunities. Keyera’s approach to community engagement is grounded in its core values of Integrity & Trust, and Responsibility & Accountability. Keyera seeks to understand the perspectives of local communities and find opportunities to contribute to their overall health and economic success. Keyera’s engagement is centered around three key aspects:

- promote meaningful dialogue and engagement
- enhance economic and social well-being
- invest in communities to build capacity and resilience

In addition to adhering to all regulated stakeholder engagement processes, Keyera is committed to engaging with communities early and throughout the life of a project. Formal engagement plans are created that guide how Keyera communicates, engages, address interests, and delivers on its commitments. Grievance procedures outline how Keyera addresses and works to resolve concerns. Through in-person and virtual engagements, Keyera maintains connections, ensure ongoing dialogue and support communities. Keyera also participates in community-led initiatives, such as local supply chain forums, community meetings, and local industry association discussions.

2022 was the inaugural year of Keyera’s updated Social Investment Program, Keyera Connects, which focuses on three strategic pillars:

- Environmental Innovation: Keyera invests in conserving its ecosystems for future generations.

- Indigenous Reconciliation: Keyera collaborates with Indigenous peoples, communities, and organizations to determine areas of focus.
- Community Resiliency: Keyera supports the infrastructure and programs that build resiliency in the communities where it operates.

In 2022, Keyera invested in charitable organizations that qualified under these pillars; prioritizing areas of operation, strengthening stakeholder relationships through strategic partnerships, and establishing relationships in communities.

Indigenous Communities

Keyera is committed to investing in a shared future by advancing Indigenous reconciliation by building long-term, strong relationships based on shared value.

Keyera endeavors to understand the interests and perspectives of the Indigenous communities, individuals, and organizations. Keyera's engagement with Indigenous peoples is guided by the following principles:

- Through meaningful dialogue, Keyera seeks to understand the truths of history, traditions, culture and perspectives of Indigenous peoples, communities, and organizations with whom Keyera interacts with.
- Actively listen and learn with humility as Keyera collaborates with Indigenous peoples, communities, and organizations to determine areas of focus and impact that build collective capacity and strength for a better future.
- Advance economic reconciliation for those affected by, or interested in, Keyera operations by supporting programs that build sustainable communities, provide meaningful opportunities in training and employment, actively engage safe and reliable business participation, and invest in community investment opportunities.

In 2022, Keyera began the development of a Reconciliation Action Plan to provide a strategic framework to advance economic reconciliation with Indigenous peoples. This plan will focus Keyera's efforts and guide its actions to foster a community of shared value and will strengthen relationships. Through the hosting of many discovery sessions, listening circles and blanket exercises, employees learned about the history of Indigenous people. Indigenous authored books, on a variety of topics including residential schools, Indigenous economics, and environmental significance, were distributed to employees to read and swap. Corporate events including Truth & Reconciliation Day, and Orange Shirt Day, brought Keyera employees to a new level of understanding about reconciliation.

In 2022, Keyera continued to engage with 32 Indigenous communities, with the aim to grow its Indigenous economic reconciliation efforts within its greenfield projects and existing operations. A key focus was ensuring the inclusion of Indigenous businesses in the construction of KAPS, the South Cheecham sulphur handling facility and the Decommissioning and Land Reclamation Program for various facilities in Central Alberta.

Keyera is committed to creating economic and social benefits for Indigenous businesses through participation in procurement and employment opportunities; an approach designed to assist in Indigenous communities with the information and knowledge required to supply services for Keyera's projects and operations. Keyera is also committed to adhering to all regulated stakeholder engagement processes for its operations, including the AER Directive 056 participant involvement requirements, the Alberta Aboriginal Consultation Office's proponent led First Nations consultation procedure and consultation regulations in the U.S. Keyera's commitment to transparent stakeholder engagement includes registration under the Alberta Lobbyist Registry.

For more information on Keyera's stakeholder engagement, inclusive of the Indigenous Engagement, please see Keyera's 2021 ESG Report available on its website at www.keyera.com.

Ethical Business Conduct

The Board has adopted a Code of Business Conduct (the “**Code**”) which applies to all directors, officers, employees and certain contractors of Keyera.

In support of the Code, Keyera has also adopted business conduct policies covering various matters, including, but not limited to, integrity, ethics, disclosure, insider trading and conflicts of interest. Keyera has also adopted a number of specific procedures and guidelines to facilitate compliance with the Code and the various policies (collectively the “**Conduct Policies**”). The Conduct Policies are reviewed and updated as necessary.

A copy of the Code, as well as more information on Keyera’s various Conduct Policies, can be found on Keyera’s website at www.keyera.com.

Whistleblower Protection

As part of its Conduct Policies, Keyera also has a whistleblower hotline which enables employees, officers, contractors and consultants who have reason to believe that a violation of applicable law, regulation or Keyera policies has occurred to report these concerns to a neutral third-party on a confidential, anonymous basis for investigation. Quarterly reports from the whistleblower hotline are provided to Keyera’s Audit Committee. All workers are expected to report any matter that may constitute a violation of law, regulation or Keyera policy. Under the Code, any individual who makes a report to the hotline in good faith is expressly protected from retaliation of any kind.

Supply Chain Policy

Keyera’s Supply Chain Policy provides that procurement will be performed based on the following guiding principles:

- Objective, Value Focused, and Risk Mitigating: Ensures contracting and procurement practices maximize value for Keyera, and mitigate financial, legal, HSE, reputational, and other risks associated with procurement activities. Indigenous partnerships will also be an important consideration in assessing value and risk to Keyera.
- Consistent and Standardized: Provides a consistent and standardized procurement framework for Keyera across all of its operations.
- Controls and Oversight: Ensures adequate financial and operational controls and governance as it relates to contracting and procurement activities.
- Fair and Ethical: Ensures the selection of suppliers is done in a fair, unbiased, ethical, and transparent manner.
- Aligned with Corporate Standards: Adheres to Keyera values, the Code, internal standards, and other internal policies throughout the contracting and procurement cycle.
- Compliance: Adheres to applicable laws, internal controls, and regulatory standards and requirements in the jurisdictions in which Keyera operates.

In addition, Keyera has screening processes in place that it can use to assess potential suppliers, including their qualifications, business conduct practices and to confirm compliance with trade controls. Keyera does not operate in conflict zones.

Cyber Risk Oversight

Keyera utilizes a number of information technology systems for the management of its business and the operation of its facilities. Structured oversight of cybersecurity risks is integral to the reliability and security of these systems. The Board, assisted by the Audit Committee, is responsible for monitoring Keyera's approach to cybersecurity. In respect of its oversight responsibilities, the Board is assisted by the Audit Committee, who is responsible for reviewing the management of risks associated with Keyera's information technology systems, including the effectiveness of Keyera's cyber security practices.

REGULATORY FRAMEWORK

General Regulatory Context

Keyera is subject to a range of operational laws, regulations and requirements imposed by various levels of government and regulatory bodies in the jurisdictions in which it operates. While these legal controls and regulations affect numerous aspects of Keyera's activities, including but not limited to, emissions, the operation of wells, pipelines and facilities, construction activities, transportation of dangerous goods, emergency response, operational safety and environmental procedures, Keyera does not believe they impact its operations in a manner materially different from other comparable businesses operating in the same jurisdictions.

As the majority of Keyera's operations and facilities are located in Alberta, disclosure in this AIF generally focuses on the Alberta regulatory regime. Keyera also has operations and carries on business in other jurisdictions including Oklahoma (Oklahoma Liquids Terminal and Wildhorse Terminal). Keyera also ships products to customers across North America. Each of these jurisdictions has its own regulatory and environmental regimes to which Keyera is subject.

The requirement for environmental and regulatory programs, obligations, reporting as well as the actions to be taken in order to be in compliance with them are managed via the OEMS Process Standard 3.3.

Greenhouse Gas and Emissions Regulation

Greenhouse gases, mainly carbon dioxide (CO₂) and methane (CH₄), are components of the raw natural gas processed and handled at Keyera's facilities. Keyera's facilities also require the combustion of fossil fuels in engines, turbines, heaters and boilers as well as the use of electricity, all of which release CO₂, CH₄, and other minor greenhouse gases. Keyera is subject to various greenhouse gas reporting requirements and CO₂ equivalent (CO₂e) emission intensity reduction requirements. Emissions intensity refers to the amount of greenhouse gas, measured on a CO₂e basis, emitted on a unit of production basis. Two of the primary factors that affect emissions intensity at Keyera's facilities are fuel gas consumption and throughput.

The regulatory framework in respect of greenhouse gases and other emissions is evolving rapidly. An increasing area of risk relates to the ongoing development, change, and costs associated with federal and provincial emissions-related regulation, including emissions management and direct costs related to compliance and monitoring.

Keyera continuously monitors legislative initiatives and regulatory trends across Canada, the U.S., and internationally to anticipate potential developments that could affect its business and operations. Keyera anticipates future international, federal, or provincial emissions reduction requirements may require further reductions of emissions or emissions intensity. Keyera engages with governments, regulators, and industry groups, both from an advocacy standpoint and to anticipate and increase its understanding of the range of possible regulatory outcomes.

Keyera recognizes expected emissions reductions may not be technically or economically feasible and failure to meet such emissions reduction requirements may result in penalties, the suspension of operations, and/or the necessity of purchasing greenhouse gas credits, all of which could materially adversely affect the oil and gas industry, including Keyera. See “Risk Factors – Operational Risks – Climate Change, Carbon Tax and the Transition to a Lower Carbon Economy”, “Risk Factors – Operational Risks – Greenhouse Gas Emissions and Targets”, “Risk Factors – Operational Risks – Change in Laws”, “Risk Factors – Operational Risks – Weather Conditions”, “Risk Factors – Operational Risks – Reputational Risk”, and “Risk Factors – Financial Risks – Environmental Compliance and Remediation Costs”.

Keyera uses the Canadian federal carbon price – anticipated to rise from \$50 per tonne of CO_{2e} in 2022 to \$170 per tonne of CO_{2e} by 2030 – as an internal carbon price to guide Keyera’s cost/benefit evaluation, planning, and decision-making. Keyera conducts detailed GHG/financial modelling to understand various potential impacts of carbon pricing on projects. This information is also used as part of Keyera’s capital investment framework. Opportunities for emissions reduction are assessed both at a facility level and relative to potential efficiency gains across multiple sites. Climate-related factors represent a key element of stage-gate project evaluation and execution systems for new projects. This evaluation includes an assessment of emerging technology, climate regulations, carbon pricing, credits/incentives, and customer needs. Economic and emissions impacts are then modelled to support decision making.

Keyera uses consulting firms and internal resources to compile GHG inventories of scope 1 and scope 2⁸ greenhouse gas emissions and reports these inventories in accordance with federal and provincial requirements and to the Board, GSC and HSE Committee. Third-party audits and/or verifications of inventories are conducted for facilities as per regulatory requirements.

Regulatory Framework Through 2022

The Federal *Greenhouse Gas Pollution Pricing Act* (“**GGPPA**”) was implemented in Alberta starting January 2020. The GGPPA is managed by Environment and Climate Change Canada and the Canada Revenue Agency. Starting January 2020, all of Keyera’s stationary combustion emissions are subject to carbon pricing. In March 2021, the Supreme Court of Canada found the GGPPA constitutional, settling several constitutional challenges by provinces in 2019.

Alberta’s Technology Innovation Emission Reduction (“**TIER**”) Regulation came into effect January 2020 and is administered by Alberta Environment and Parks. The TIER uses an intensity (emissions/production) based benchmark approach, and all regulated facilities fall under a high performance or facility-specific benchmark. Facility-specific benchmarks are based on 2013 to 2015 emissions intensity with discretion to use alternate years. In December 2022, the Alberta Government amended the TIER regulation for 2023 onward to increase stringency, expand carbon capture crediting opportunities, and align with the federal carbon pricing framework. The amended TIER regulations maintain equivalence to the requirements of the GGPPA and therefore, Alberta TIER-regulated facilities will not be regulated under GGPPA. Keyera has six large final emitter (LFE) assets⁹ and reports its remaining facilities as an aggregate facility regulated under TIER.

If a facility (or aggregate) can produce the product with fewer emissions than the assigned benchmark, then it will be entitled to generate Emissions Performance Credits (“**EPCs**”). If a facility cannot meet the industry benchmark, compliance options include:

- purchasing emissions offsets;
- purchasing EPCs;

⁸ Scope 1 emissions are direct greenhouse gas (GHG) emissions that occur from sources that are controlled or owned by an organization (e.g., emissions associated with fuel combustion in boilers). Scope 2 emissions are indirect GHG emissions associated with the purchase of electricity, steam, heat, or cooling.

⁹ Large final emitters are facilities that emit greater than 100,000 tonnes of CO₂ per year. Keyera’s LFE assets are the Rimbey, KFS and AEF facilities and the Wapiti, Pipestone and Strachan gas plants.

- purchasing fund credits from the Climate Change and Emissions Management Fund at a cost of \$50/tonne for 2022; and/or
- EPCs can be generated by LFE or an aggregate facility with an emissions intensity below the net emissions target and can be sold internally or into the marketplace once serialized.

In addition to these Alberta regulations, Keyera also has emission reporting responsibilities under the *Canadian Environmental Protection Act* (“**CEPA**”). The reporting threshold for CO_{2e} emissions under CEPA is 10,000 tonnes. Summaries of these federal emissions reports are publicly available.

The federal government is also developing a Clean Fuel Standard that will require all producers and importers of liquid fossil fuels in Canada to reduce or offset the carbon intensity of the fuels they produce or import. The federal Clean Fuel Regulation (“**CFR**”) was finalized in 2022 and requires all producers and importers of liquid fossil fuels in Canada to reduce or offset the carbon intensity of the fuels they produce or import. The CFR comes into effect July 2023, at which point carbon intensity reduction requirements for liquid fossil fuels are required. Keyera does not have a compliance obligation under the CFR and will continue to monitor the implementation of the regulation for potential opportunities for Keyera and its customers.

Keyera also reports on combusted greenhouse gas equivalent of all products that it imports and exports in and out of the U.S. in accordance with U.S. Environment Protection Agency requirements.

Other Regulatory Developments for Emissions

Keyera is monitoring developments with respect to the Joint Initiative on Methane Reduction and Verification. The Federal Environmental and Climate Change Canada Methane Regulations and the revised AER Directives 60 and 17 were released in 2018. While not a significant component of Keyera’s operational emissions inventory, Keyera actively monitors and reduces methane emissions, including fugitive emissions. Keyera’s Fugitive Emission Management Program consists of multiple site surveys per year, as well as a Leak Detection and Repair protocol, which uses infrared cameras to detect and address fugitive emissions sources. Keyera applies different techniques, including enhanced facility design and construction, retrofits and operational controls, to improve equipment inventories and limit fugitive emissions. Given the nature of Keyera’s operations, it does not anticipate any significant impact associated with the Methane Reduction and Verification program.

In 2016, the Government of Canada also released Multi-Sector Air Pollutants Regulations with national performance standards for NO_x emissions. Within the regulations there are performance standards for two equipment types: gaseous-fuel-fired boilers and heaters, and stationary spark-ignition gaseous-fuel-fired engines. Reporting requirements came into effect in 2017. Flexible performance standards for engines have been utilized with an interim milestone of 2021 and a final compliance deadline of 2026. Boilers and heaters will have performance standards starting in 2026. Keyera carefully monitors NO_x emissions at its plants in order to manage its operations to meet the upcoming compliance timelines. Additionally, Keyera established an interdisciplinary task force to develop a fleet management plan that is coordinated with Keyera’s other efficiency and compliance efforts.

Overall Implications of Emissions Regulation for Keyera

Emissions regulations and climate-related considerations continue to be a significant component of Keyera’s overall corporate strategy evaluation and development. Enterprise risk is regularly reviewed by the Board to ensure relevant risks, including climate-related regulatory, market, reputation and operational risks, are identified and appropriate controls and mitigation practices are in place. In 2021, Keyera completed a comprehensive Enterprise Risk Management (“**ERM**”) review, conducted by a third-party consultant. These risks are incorporated into the formulation of long-term strategic plans, near-term annual plans, budgeting, and capital investment decisions.

Keyera anticipates its compliance costs will increase over time as a result of the evolving greenhouse gas emissions regulatory requirements and increase in carbon pricing. However, based on currently available information, Keyera does not expect the incremental direct cost of compliance between now and 2023 to be material. Keyera conducts a detailed GHG/financial modelling to understand various potential impacts of carbon pricing on projects. Keyera's analysis also considers the estimated TIER compliance obligations forecast, forecast throughput at Keyera's facilities, planned or anticipated emissions reduction initiatives and expected future emissions performance of Keyera facilities.

In addition to the expected direct costs associated with regulatory changes, there may also be indirect costs, as well as other consequences and implications for Keyera. For example, an increase to electricity costs (whether due to increased short-term compliance costs, longer-term phasing out of coal generated electricity or other factors) may render the potential increased cost implications more significant and increase volatility in power prices. Power costs are a large component of the operating costs at many of Keyera's facilities, and therefore, Keyera closely monitors these developments and continues to evaluate and execute its long-term power strategy in anticipation of pending changes in electrical generation in Alberta.

Keyera is conscious of the potential transitional risks, implications and costs associated with increased negative public sentiment toward the energy industry. See: "Risk Factors – Operational Risks – Climate Change, Carbon Tax and the Transition to a Lower Carbon Economy", "Risk Factors – Operational Risks – Greenhouse Gas Emissions and Targets", "Risk Factors – Operational Risks – Changes in Laws", "Risk Factors – Operational Risks – Changing Expectations from Stakeholders", "Risk Factors – Operational Risks – Regulatory Compliance, Approvals and Interventions", "Risk Factors – Financial Risks – Operating, Capital and General and Administrative Costs", "Risk Factors – Financial Risks – Environmental Compliance and Remediation Costs", "Risk Factors – Financial Risks – Capital Market and Liquidity Risks", "Risk Factors – Financial Risks – Debt Matters", "Risk Factors – Financial Risks – Credit Ratings", "Risk Factors – Financial Risks – Credit Risk", "Risk Factors – Financial Risks – Ability to Divest Certain Assets".

The identification and assessment of these risks, as well as risk mitigation processes, are included within Keyera's ERM process described above.

Some of the ways that Keyera is managing these reputational, market and policy risks include putting efforts towards:

- further developing and executing on an energy transition strategy which includes exploring and implementing technology and strategies that improve the emission efficiency of its operations, and reduces its environmental footprint;
- exploring opportunities to help customers decarbonize their products through various services and new business lines;
- working jointly with customers, partners, industry and government on policy development and energy transition opportunities;
- managing compliance costs through renewable power and carbon offsets;
- establishing GHG targets that help drive performance improvements and emission reduction;
- tracking and publicly disclosing Keyera's environmental and emissions performance, including reporting against the recommendations of the TCFD;
- speaking with and understanding investor, insurer, community and other stakeholder expectations, to enable Keyera to anticipate, understand, and respond appropriately to potential areas of challenge or opposition; and
- maintaining strict capital discipline, a strong balance sheet, and a diverse financing program.

Keyera will continue to evaluate regulatory, reputational and market developments to assess potential financial and operational implications. Given the multitude of variables that could cause changes to outcomes, it is currently not possible to predict future incremental compliance costs with any certainty.

Environmental Regulation (Non-Emissions)

General Framework

The midstream industry in Alberta is subject to provincial and federal environmental legislation and regulations. Among other things, the environmental regulatory regime provides for restrictions and prohibitions on releases or emissions of various substances produced in association with certain oil and natural gas industry operations. Environmental regulation affects the operation of facilities and limits the extent to which facility expansion is permitted. In addition, legislation requires that facility sites and pipelines be abandoned and reclaimed to the satisfaction of provincial authorities and local landowners. A breach of such legislation may result in notices of non-compliance, the imposition of fines, the issuance of clean-up orders or the shutting down of facilities and pipelines.

The AER is the main government agency that regulates midstream operations and facilities in Alberta. In addition, some activities and facilities are also regulated by Alberta Environment and Parks. Among the primary pieces of legislation that form the regulatory framework are the *Oil and Gas Conservation Act* (Alberta), the *Pipelines Act* (Alberta), *Surface Rights Act* (Alberta) and the *Environmental Protection and Enhancement Act* (Alberta) (“EPEA”), along with all related regulations. In order to construct and operate most midstream facilities, a license and potentially an operating approval from the AER is required. The license and approval requirements will depend on such factors as the nature of the facility or installation, the type of activity and the type of product. To hold a license the applicant must demonstrate, at the time of application, that the impact of the facility on the environment will be within acceptable limits. Operating approvals are intended to address a facility’s impact on the physical environment and limit emissions to air and water depending on the size of the facility and the nature of the product being handled. The AER also conducts regular inspections of the facilities that are subject to their regulation. The disposal of wastewater and gases into wells drilled into deep geologic formations is regulated by the AER. A number of Keyera’s facilities hold approvals and permits for these disposal activities. Further, the use of water (surface or groundwater) is regulated under the *Water Act* (Alberta).

Under EPEA, environmental standards and compliance obligations for releases, clean-up and reporting are subject to scrutiny by the AER and the public. Liability for clean-up, remediation and reclamation costs may be imposed on a wide range of parties including present and past owners, or those that had charge, management or control of a substance that has been spilled or released. Regulators may issue shut-down orders where facilities or pipelines are not in compliance with the environmental laws or operating approvals, and fines under EPEA may be as high as \$1 million for each day that an offence under EPEA continues. Keyera has never been subject to enforcement actions of this nature.

The AER has also issued multiple directives and guides with strict requirements and standards concerning matters such as oilfield waste management and the suspension, abandonment and reclamation of oil and natural gas wells, pipelines, and facilities that must be factored into the cost of conducting operations in Alberta.

In the U.S., the primary regulatory bodies are the Pipeline Hazardous Materials Safety Administration (Federal), the Oklahoma Department of Environmental Quality (State), the Occupational Safety and Health Administration (Federal) and the Environmental Protection Agency (EPA).

Both countries have regulatory oversight related to transportation of dangerous/hazardous goods. In Alberta, this is regulated by Alberta Transportation and Transport Canada (Federal). In the U.S., the primary regulators are the Department of Transportation (Federal) and the Federal Rail Administration.

Keyera does not have any operations in areas considered critical habitats, such as the Caribou zone in Northern Alberta. When evaluating projects in areas that may have an impact on critical habitats, Keyera undertakes appropriate evaluation, monitoring and testing prior to proceeding with development activities and may modify its plans or operating parameters to mitigate potential impacts.

Noise Control Regulation

AER Directive 038 establishes the regulatory framework with respect to noise control applicable to all operations and facilities under the jurisdiction of the AER. This directive sets certain parameters with respect to maximum permissible sound levels and measuring the noise associated with industrial developments regulated by the AER. Keyera manages its operations and plans capital expansions at its facilities, identifying noise impacts and mitigation measures is an important consideration. Directive 038 also recognizes that, under special circumstances, permissible sound levels from a resource facility could be adjusted from what would otherwise be calculated under this Directive 038. Alberta's Industrial Heartland area in the Fort Saskatchewan region has been identified as a special circumstance and as such a separate regional noise management plan has been developed for this area. The KFS facility falls under this regional plan.

Transportation of Dangerous Goods

Petroleum products, including NGLs, crude oil, and iso-octane are subject to regulation under the transportation of dangerous goods, or TDG, legislation in Canada and the U.S., as well as other jurisdictions to the extent shipments are entering or leaving other jurisdictions (e.g., Mexico). Keyera has a significant fleet of rail cars under lease that it uses to move these products across Canada and the U.S., plus it also loads third-party rail cars at many of its facilities. Keyera does not own or lease any product transportation trucks, but it does have truck loading/off-loading racks at a number of its facilities and also contracts with other companies to provide trucking services for products requiring transport. Because Keyera ships and receives these products to and from various locations across North America, it is required to comply with TDG laws in each of these jurisdictions.

TDG laws require parties handling, offering for transport, transporting or importing certain dangerous goods to have an approved Emergency Response Assistance Plan (“ERAP”) in place. ERAPs are required for (i) Class II products such as propane and butane; and (ii) for Class III products such as crude oil and condensate when transported by rail. An ERAP is intended to ensure that specialized emergency response personnel and equipment are available in a timely manner, in order to assist and/or supplement primary emergency responders responding to an incident.

Keyera monitors regulatory developments, and other recommendations that are introduced by regulatory agencies with respect to TDG matters, including safety data sheet requirements for the products it handles and rail car specifications. Keyera also monitors the practices and tariffs of railway companies and has observed that the major railway companies in Canada have implemented standard contract and/or tariff provisions aimed at shifting responsibility for certain damages and claims to shippers. See “Risk Factors – Operational Risks – Transportation of Dangerous Goods”.

CAPITAL STRUCTURE OF THE CORPORATION

The Corporation is authorized to issue Common Shares, First Preferred Shares and Second Preferred Shares. The rights, privileges and restrictions on the Common Shares, First Preferred Shares and Second Preferred Shares are contained in the articles of the Corporation, which are available on SEDAR at www.sedar.com and on the Corporation's website at www.keyera.com.

As of December 31, 2022, there were 229,153,373 Common Shares and no First Preferred Shares or Second Preferred Shares issued and outstanding. An overview of the capital structure of the Corporation is described below.

Common Shares

Pursuant to its articles, the Corporation is authorized to issue an unlimited number of Common Shares. The rights, privileges, restrictions and conditions attaching to the Common Shares are as follows:

- *Voting:* Shareholders have the right to receive notice of, attend and vote at all shareholder meetings, except meetings of holders of another class of shares. Each Common Share is entitled to one vote.
- *Dividends:* Subject to the preferences accorded to holders of First Preferred Shares, Second Preferred Shares and any other shares of the Corporation ranking senior to the Common Shares from time to time, the Shareholders are entitled to receive dividends, if, as and when declared by the Board of Directors.
- *Liquidation, Dissolution or Winding-Up:* Subject to the preferences accorded to holders of First Preferred Shares, Second Preferred Shares and any other shares of the Corporation ranking senior to the Common Shares from time to time, the Shareholders are entitled to share equally, share for share, in the remaining property of the Corporation in the event of the voluntary or involuntary liquidation, dissolution or winding-up of the Corporation.

Preferred Shares

The Corporation is authorized to issue two classes of Preferred Shares - one class referred to as the "First Preferred Shares" and the second class referred to as the "Second Preferred Shares", each issuable in one or more series. As of the date hereof, there are no issued and outstanding Preferred Shares of either class. The number of Preferred Shares that may be authorized and issued is restricted. Specifically, Preferred Shares of either class may not be issued if:

- the aggregate number of First Preferred Shares and Second Preferred Shares that would then be outstanding would exceed 50% of the aggregate number of Common Shares then outstanding; or
- the maximum aggregate number of Common Shares into which all of the First Preferred Shares and Second Preferred Shares then outstanding could be converted in accordance with their terms (regardless of any restrictions on the time of conversion and regardless of any conditions to the conversion) would exceed 20% of the aggregate number of Common Shares then outstanding; or
- the aggregate number of votes which the holders of all of the First Preferred Shares and the holders of all the Second Preferred Shares then outstanding would be entitled to cast (regardless of any conditions) at any meeting of shareholders (other than a meeting at which only holders of one or more of the classes or series of Preferred Shares are entitled to vote) would exceed 20% of the aggregate number of votes which the holders of all of the Common Shares then outstanding would be entitled to cast at any such meeting.

Subject to the foregoing restrictions and to filing articles of amendment in accordance with the ABCA, the Board of Directors may issue Preferred Shares of either class in one or more series without par value and may, before such issuance, fix the designation, rights, privileges, restrictions and conditions attaching to each such series, including but not limited to: the amount (if any) specified as being payable preferentially to such series on the distribution of assets of the Corporation in the event of the voluntary or involuntary liquidation, dissolution or winding-up of the Corporation (as well as the extent of any further participation in such a distribution of assets); voting rights, if any; and dividend rights (including whether such dividends be preferential, or cumulative or non-cumulative), if any. In accordance with the Corporation's articles, each class of Preferred Shares would be entitled to preference over Common Shares (and any other shares ranking junior to the particular class of Preferred Shares) with respect to the payment of dividends and the distribution of assets in the event of liquidation, dissolution or winding-up of the Corporation (whether voluntary or involuntary).

In connection with the creation and issuance of the Keyera Subordinated Hybrid Notes, the Corporation created two new series of the First Preferred Shares designated as “Preference Shares – Series 2019-A” and “Preference Shares – Series 2021-A”, in 2019 and 2021, respectively. The rights, privileges, restrictions and conditions attached to such series of First Preferred Shares are set forth in the applicable Articles of Amendment filed by the Corporation on June 13, 2019 and March 10, 2021, and available on SEDAR at www.sedar.com. No First Preferred Shares of either series are currently outstanding. Such series of First Preferred Shares will only be issued in the circumstances set forth in the First Supplemental Note Indenture and Second Supplemental Note Indenture, as applicable. See “Subordinated Hybrid Notes” below.

Credit Facilities

As at December 31, 2022, the Partnership has a \$1.482 billion unsecured revolving credit facility with a syndicate of Canadian financial institutions (the “**Syndicated Credit Facility**”) with approximately \$30 million drawn. Pursuant to the terms of the Syndicated Credit Facility, the credit limit can be increased to \$2.0 billion at the discretion of the lenders and subject to certain conditions being met. The Syndicated Credit Facility is set to expire on two dates: \$1.3 billion of the Syndicated Credit Facility expires on December 6, 2027, and the remaining \$182 million expires on December 6, 2026. The Partnership also has two unsecured revolving demand facilities, one in the amount of \$25 million and the other in the amount of \$50 million (collectively with the Syndicated Credit Facilities, the “**Credit Facilities**”). Depending on the type of borrowing, the Credit Facilities bear interest based on the agent’s or applicable lender’s rates for Canadian prime commercial loans, U.S. base rate loans, letters of credit and bankers’ acceptances and the LIBOR rate, plus a margin or stamping fee, as applicable.

Senior Unsecured Notes

Keyera’s long term debt includes senior unsecured notes (the “**Senior Unsecured Notes**”) that were issued by the Partnership on a private placement basis pursuant to a number of separate note agreements (the “**Note Agreements**”) and are not listed or quoted on any exchange. Keyera may redeem the Senior Unsecured Notes before their respective maturity dates, subject to a make whole premium.

As of December 31, 2022, Keyera had C\$1.072 billion and US\$333 million (C\$451 million equivalent) principal amount of Senior Unsecured Notes outstanding as follows:

Senior Unsecured Notes US Denominated Debt		
Amount	Interest Rate	Maturity Date
US\$128 million	4.19%	June 2024
US\$140 million	4.75%	November 2025
US\$65 million	4.95%	November 2028

Senior Unsecured Notes Canadian Denominated Debt		
Amount	Interest Rate	Maturity Date
\$30 million	3.50%	June 2023
\$17 million	4.91%	June 2024
\$100 million	4.92%	October 2025
\$20 million	5.05%	November 2025
\$30 million	4.15%	June 2026
\$200 million	3.96%	October 2026
\$400 million	3.68%	September 2027
\$100 million	5.09%	October 2028
\$100 million	4.11%	October 2028
\$75 million	5.34%	April 2029

Medium Term Notes

On June 21, 2018, May 29, 2020 and March 28, 2022, the Corporation issued Medium Term Notes, Series 1, Medium Term Notes, Series 2, and Medium Term Notes, Series 3, respectively. The Corporation's obligations under the Keyera Medium Term Notes are guaranteed by certain subsidiaries of the Corporation. The Keyera Medium Term Notes are not listed or quoted on any exchange.

Subject to certain conditions, as noted below, the Corporation may redeem each series of Keyera Medium Term Notes, either in whole or in part, upon not less than 10 and not more than 60 days prior notice, at a price equal to the greater of (i) par, and (ii) the Canada Yield Price (as defined below), plus any unpaid interest, if any, to but excluding the date of redemption. In respect of the Keyera Medium Term Notes, "Canada Yield Price" means, in effect, a price equal to the price of a specific series of Keyera Medium Term Notes, as applicable, calculated in accordance with generally accepted financial practice in Canada to provide a yield to maturity equal to the Government of Canada Yield (as defined below) plus the redemption premium set forth in the table below. In respect of the Keyera Medium Term Notes, "Government of Canada Yield" means, on any date, in effect, the yield to maturity on such date compounded semi-annually which a noncallable Government of Canada bond would carry if issued, in Canadian dollars in Canada, at 100 percent of its principal amount on such date with a term to maturity equal to the remaining term to maturity of the specified series of Keyera Medium Term Notes, as applicable. The Government of Canada Yield will be the average of the yields determined by two major Canadian investment dealers selected by the Corporation. In certain circumstances following a Change of Control Trigger Event (as defined in the Note Indenture), the Corporation will be required to make an offer to repurchase all or, at the option of any holder of the Keyera Medium Term Notes, any part, at a purchase price payable in cash equal to 101 percent of the aggregate outstanding principal amount thereof plus accrued and unpaid interest, if any, to the date of purchase. After certain dates (as set forth below), a series of Keyera Medium Term Notes may be redeemed at a price equal to par, plus accrued but unpaid interest, if any, to but excluding the date of the redemption. See "Risk Factors – Financial Risks – Credit Ratings".

Medium Term Notes Canadian Denominated Debt					
Series	Issue Date	Maturity Date	Amount	Interest Rate	Redemption Premium (per annum)
1 ⁽¹⁾	June 21, 2018	June 21, 2028	\$400 million	3.934%	0.44%
2 ⁽²⁾	May 29, 2020	May 29, 2030	\$400 million	3.959%	0.85%
3 ⁽³⁾	March 28, 2022	March 28, 2032	\$400 million	5.022%	0.65%

Notes:

- (1) The Corporation may redeem the Medium Term Notes, Series 1, (a) at any time prior to March 21, 2028 at a price equal to the greater of (i) par and (ii) the Canada Yield Price (to be based on a discount rate of the Government of Canada Yield to March 21, 2028, plus 44 basis points), and (b) at any time on or after March 21, 2028, at a price equal to par, plus, in either case, accrued but unpaid interest, if any, to but excluding the date of redemption.
- (2) The Corporation may redeem the Medium Term Notes, Series 2, (a) at any time prior to February 28, 2030 at a price equal to the greater of (i) par and (ii) the Canada Yield Price (to be based on a discount rate of the Government of Canada Yield to February 28, 2030, plus 85 basis points), and (b) at any time on or after February 28, 2030 at a price equal to par, plus, in either case, accrued but unpaid interest, if any, to but excluding the date of redemption.
- (3) The Corporation may redeem the Medium Term Notes, Series 3, (a) at any time prior to December 28, 2031 at a price equal to the greater of (i) par and (ii) the Canada Yield Price (to be based on a discount rate of the Government of Canada Yield to December 28, 2031, plus 65 basis points), and (b) at any time on or after December 28, 2031, at a price equal to par, plus, in either case, accrued but unpaid interest, if any, to but excluding the date of redemption (3 month par call).

Subordinated Hybrid Notes

On June 13, 2019 and March 10, 2021, the Corporation issued Subordinated Hybrid Notes, Series 1, and Subordinated Hybrid Notes, Series 2, respectively. The Subordinated Hybrid Notes, Series 1 are fixed-to-floating rate subordinated notes outstanding in the principal amount of \$600 million and mature on June 13, 2079. Interest on the Series 1 notes is fixed at 6.875% per annum until June 13, 2029. If the Series 1 notes are not redeemed on or after such date, the interest rate will float and will be re-set on each interest payment date. The Subordinated Hybrid Notes, Series 2, are fixed-to-fixed rate subordinated notes outstanding in the principal amount of \$350 million and mature on March 10, 2081. Interest on the Series 2 notes is fixed at 5.95% per annum until March 10, 2031. If the Series 2 notes are not redeemed on or after such date, the interest rate will re-set at fixed rates of 4.655% plus the 5-year Government of Canada Yield for years 11 to 30 and 5.405% plus the 5-year Government of Canada Yield for years 31 to 60.

The Keyera Subordinated Hybrid Notes are subordinate in right of payment to all indebtedness that is not expressly subordinate, including indebtedness under the Credit Facilities, the Senior Unsecured Notes and the Keyera Medium Term Notes. The Keyera Subordinated Hybrid Notes are not listed or quoted on any exchange. The Corporation's obligations under the Keyera Subordinated Hybrid Notes are guaranteed by certain subsidiaries of the Corporation.

So long as no event of default has occurred and is continuing, the Corporation can elect to defer the interest payable on the Keyera Subordinated Hybrid Notes subject to certain restrictions and conditions. Any deferred interest will accrue until paid. The Keyera Subordinated Hybrid Notes, and any accrued and unpaid interest thereon, convert automatically into the Preference Shares – Series 2019-A or Preference Shares – Series 2021-A, as applicable, in connection with an insolvency event.

The complete terms of the Keyera Subordinated Hybrid Notes are set forth in the First Supplemental Note Indenture and the Second Supplemental Note available on SEDAR at www.sedar.com.

Subordinated Hybrid Notes Canadian Denominated Debt			
Series	Amount	Interest Rate	Maturity Date
1 ⁽¹⁾	\$600 million	6.875%	June 13, 2079
2 ⁽²⁾	\$350 million	5.95%	March 10, 2081

Notes:

- (1) On or after June 13, 2029, the Corporation may, at its option, on giving not more than 60 nor less than 10 days' notice to the noteholders, redeem the notes, in whole at any time or in part from time to time, on any interest payment date. The redemption price per \$1,000 principal amount of notes redeemed will be 100% of the principal amount thereof, together with accrued and unpaid interest to, but excluding, the date fixed for redemption. Notes that are redeemed shall be cancelled and shall not be reissued. The Corporation may only redeem the notes earlier in certain limited circumstances.
- (2) On or after March 10, 2031, the Corporation may, at its option, on giving not more than 60 nor less than 10 days' notice to the noteholders, redeem the notes, in whole at any time or in part from time to time, on any interest payment date. The redemption price per \$1,000 principal amount of notes redeemed will be 100% of the principal amount thereof, together with accrued and unpaid interest to, but excluding, the date fixed for redemption. Notes that are redeemed shall be cancelled and shall not be reissued. The Corporation may only redeem the notes earlier in certain limited circumstances.

Credit Ratings

The following information with respect to the Corporation's credit ratings is provided as it relates to Keyera's financing costs and liquidity. Specifically, credit ratings affect Keyera's ability to obtain short-term and long-term financing and impact the cost of such financing. A reduction in the current ratings on the Corporation's debt by its rating agencies, particularly a downgrade below investment grade ratings, could adversely affect Keyera's cost of financing and its access to sources of liquidity and capital. In addition, changes in credit ratings may affect Keyera's ability to enter into, and the associated costs of entering into, normal course derivative or hedging transactions.

DBRS and S&P are rating agencies that provide credit ratings. Credit ratings are intended to provide investors with an independent measure of credit quality of any issues of debt securities. **The credit ratings assigned by the rating agencies are not recommendations to purchase, hold or sell the securities, nor do the ratings comment on market price or suitability for a particular investor. Any rating may not remain in effect for a given period of time or may be revised or withdrawn entirely by a rating agency in the future if in its judgement circumstances so warrant.**

The Corporation paid each of DBRS and S&P their customary fees in connection with the provision of the below ratings. The Corporation has not made any payments to DBRS or S&P over the past two years for services unrelated to the provision of such ratings.

DBRS

DBRS Credit Ratings ¹		
Debt	Rating Action ^{2,3}	Trend
Issuer Rating	BBB	Stable
Senior Unsecured Notes (Keyera Medium Term Notes)	BBB	Stable
Keyera Subordinated Hybrid Notes	BB (high)	Stable

Notes:

- (1) DBRS has ten rating categories for long-term debt and long term-issuer credit ratings, which range from "AAA" to "D". DBRS uses "high" and "low" designations on ratings from AA to C to indicate the relative standing within a particular rating category. The absence of a "high" or "low" designation indicates that a rating is in the middle of the category.

- (2) In October 2022, DBRS confirmed the Corporation's public "Issuer Rating" of "BBB", Senior Unsecured Notes rating of "BBB" (to the Keyera Medium Term Notes), Fixed-to-Floating Rate Subordinated Notes (Subordinated Hybrid Notes, Series 1) rating of "BB (high)", as well as Fixed-to-Fixed Rate Subordinated Notes (Subordinated Hybrid Notes, 2) rating of "BB (high)". Trends for all 4 ratings are "stable". The BBB and BB (high) ratings are the fourth and fifth highest ratings of DBRS' ten rating categories for long-term debt and issuer rating.
- (3) In DBRS' view, the BBB rating indicates that the Keyera Medium Term Notes are of adequate credit quality and the capacity for payment of financial obligations is considered acceptable; however, the issuer may be vulnerable to future events. The BB (high) rating, in DBRS' view, indicates that the Keyera Subordinated Hybrid Notes are non-investment grade, which means that the capacity for the payment of financial obligations is considered uncertain and the issuer may be vulnerable to future events.

S&P

S&P Credit Ratings ¹		
Debt	Rating ^{2,3}	Trend
Issuer Rating	BBB-	Stable
Senior Unsecured Notes (Keyera Medium Term Notes)	BBB-	Stable
Keyera Subordinated Hybrid Notes	BB	Stable

Notes:

- (1) S&P has ten rating categories for long-term debt and ten rating categories for long-term issuer credit ratings, which range from "AAA" to "D". The ratings from "AA" to "CCC" may be modified by the addition of a plus (+) or minus (-) sign to show relative standing within the major rating categories.
- (2) In September 2022, S&P confirmed the Corporation's public "Issuer Rating" of "BBB-", Senior Unsecured Notes rating of "BBB-" (to the Keyera Medium Term Notes), and Keyera Subordinated Hybrid Notes rating of "BB". The BBB- and BB ratings are the fourth and fifth highest ratings of S&P's rating categories described above.
- (3) Issues of debt securities rated BBB- are judged by S&P to exhibit adequate protection parameters whereas issues of debt securities rated BB have, in S&P's view, speculative characteristics, but is the least vulnerable of the speculative issues. Long-term issuers rated BBB- are judged by S&P as having adequate capacity to meet financial commitments. However, for both issues of debt securities and for long-term issuers, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

Shareholder Rights Plan

The Corporation and its predecessors have had a shareholder rights plan in place since 2007. The current shareholder rights plan is dated as of March 14, 2017 and was renewed by the Shareholders on May 12, 2020 (the "**Rights Plan**") and must be reconfirmed by Shareholders at the 2023 annual meeting of Shareholders and every third annual meeting thereafter. The Rights Plan has been adopted to ensure, to the extent possible, that all Shareholders are treated fairly in connection with any take over bid for the Corporation and to ensure that the Board of Directors is provided with sufficient time to evaluate unsolicited take-over bids and to explore and develop alternatives to maximize Shareholder value. The Rights Plan creates a right that attaches to each present and subsequently issued Common Shares. Until the Separation Time (as defined in the Rights Plan), which typically occurs at the time of an unsolicited take over bid, whereby a person acquires or attempts to acquire 20 percent or more of the Common Shares, the rights are not separable from the Common Shares, are not exercisable and no separate rights certificates are issued. Each right entitles the holder, other than the 20 percent acquirer, from and after the Separation Time (as defined in the Rights Plan) and before certain expiration times, to acquire one Common Share at a substantial discount to the market price at the time of exercise. The Board of Directors may waive the application of the Rights Plan in certain circumstances.

A copy of the agreement relating to the current Rights Plan is available on the Keyera website at www.keyera.com and on SEDAR at www.sedar.com.

DIVIDENDS

Overview

The Corporation's current practice is to pay monthly cash dividends on the Common Shares on the 15th of each calendar month (or the next business day should the 15th not be a business day) to Shareholders of record as of the dividend record date, which is usually 20 to 26 days prior to the dividend payment date.

On February 14, 2023, Keyera announced that, subject to the approval of future Common Share dividends by the Board of Directors, the Corporation intends to transition from a monthly to a quarterly dividend payment schedule, following the monthly March 2023 dividend, if, as and when declared by the Board of Directors. Following the final monthly dividend expected to be payable on March 31, 2023 to shareholders of record on March 22, 2023, quarterly payments are expected to be made on the last business day of June, September and December in 2023, and on the last business day of March, June, September and December in subsequent years, to shareholders of record on the 15th day of the corresponding month (or succeeding business day, if applicable), if, as and when declared by the Board of Directors. Subject to approval of the Board of Directors, the first quarterly dividend is expected to be paid in June 2023.

The Corporation's dividend policy is intended to provide Shareholders with relatively stable and predictable dividends, while retaining a portion of cash flow to help fund maintenance capital and ongoing growth projects. In determining the level of dividends to be declared, the Board of Directors takes into consideration such factors as current and expected future levels of distributable cash flow (including income tax), capital expenditures, borrowings and debt repayments, changes in working capital requirements and other factors. Over the long term, the Corporation expects to continue to pay dividends from its distributable cash flow; however, the Corporation's credit facilities may be used to stabilize dividends from time to time.

Although the Corporation intends to continue to make regular monthly or quarterly dividends to Shareholders, dividends are not guaranteed. The amount of dividends to be paid on the Common Shares, if any, is subject to the discretion of the Board of Directors and may vary depending on a variety of factors. In addition to the ABCA-mandated solvency and liquidity tests that must be met, the Corporation's ability to declare and pay dividends is also dependent on its compliance with the covenants under its Credit Facilities, Note Agreements and Note Indenture. See "Capital Structure of the Corporation" and "Risk Factors – Financial Risks – Cash Dividends Are Not Guaranteed".

Dividend History

The following table sets forth the per Common Share dividends declared on the Common Shares for the three most recently completed years:

Month	2022	2021	2020
January	\$0.16	\$0.16	\$0.16
February	\$0.16	\$0.16	\$0.16
March	\$0.16	\$0.16	\$0.16
April	\$0.16	\$0.16	\$0.16
May	\$0.16	\$0.16	\$0.16
June	\$0.16	\$0.16	\$0.16
July	\$0.16	\$0.16	\$0.16
August	\$0.16	\$0.16	\$0.16
September	\$0.16	\$0.16	\$0.16
October	\$0.16	\$0.16	\$0.16
November	\$0.16	\$0.16	\$0.16
December	\$0.16	\$0.16	\$0.16
Total	\$1.92	\$1.92	\$1.92

To date in 2023, dividends of \$0.16 per Common Share were declared in January and February. The January declared dividend was paid on February 15, 2023 and the February declared dividend is payable on March 15, 2023.

Premium DRIP

The Corporation adopted the Premium DRIP to allow Shareholders to reinvest cash dividends into additional Common Shares and, in the case of the Premium Dividend™ component of the plan, exchange such Common Shares for a premium cash payment equal to 101% of the regular declared cash dividend. On April 22, 2020, Keyera announced that it was suspending the Premium DRIP. Further information on the suspended Premium DRIP can be found on Keyera's website at www.keyera.com.

MARKET FOR SECURITIES

Trading Price and Volume

The Common Shares are listed for trading on the TSX under the symbol "KEY". The following table sets forth the monthly high and low sales prices at close and total monthly volumes for the Common Shares traded on the TSX during 2022.

Calendar Period	Price per Share (\$)		Share Trading
	High (Close)	Low (Close)	Volume
January	29.91	27.40	20,949,269
February	31.04	28.59	19,741,480
March	31.94	28.96	29,375,102
April	34.00	31.20	22,248,428
May	34.12	31.22	25,592,040
June	35.25	28.62	22,774,534
July	33.19	29.18	14,162,245
August	33.37	31.18	14,387,279
September	32.00	27.90	17,896,484

Calendar Period	Price per Share (\$)		Share Trading
	High (Close)	Low (Close)	Volume
2022			
October	29.27	27.59	16,625,549
November	31.34	27.85	19,902,941
December	31.36	28.43	22,533,914

DIRECTORS AND EXECUTIVE OFFICERS OF THE CORPORATION

Directors of the Corporation

In accordance with its articles, the Corporation must have a minimum of three directors and may have a maximum of twelve directors, and directors are elected annually by the Shareholders to serve until the next annual meeting. Between annual meetings, the Board of Directors has the authority to appoint one or more additional directors to serve until the next annual meeting provided that the number of directors so appointed does not exceed 1/3 of the number of directors holding office at the expiration of the last annual meeting.

There are currently 11 directors. At the annual meeting of Shareholders held on May 10, 2022, the following ten directors were elected: James Bertram, Michael Crothers, Blair Goertzen, Douglas Haughey, Gianna Manes, Michael Norris, Thomas O'Connor, Charlene Ripley, Dean Setoguchi and Janet Woodruff. Effective June 9, 2022, the Board of Directors appointed Isabelle Brassard as a director. The names, municipalities of residence and principal occupations for the five most recently completed financial years and committee membership of the directors of the Corporation as of the date hereof are set out below. Additional information regarding Keyera's directors is set out in its information circulars for Keyera's annual meetings of Shareholders.

Name, Residence, Principal Occupation, Period of Service as a Director, Other Issuers of which the Director is a Director	Position on Committees of the Board of Directors
<p>James V. Bertram Calgary, Alberta, Canada</p> <p>Mr. Bertram has been a director since March 28, 2003 and assumed the role of Chair on June 1, 2016. Mr. Bertram was the Chief Executive Officer of Keyera since its inception in 1998 until December 31, 2014 and Executive Chair from January 1, 2015 until June 1, 2016. Since that time Mr. Bertram has been a corporate director. Mr. Bertram is also a director of Emera Inc. and Methanex Corporation.</p>	<p>Mr. Bertram is:</p> <ul style="list-style-type: none"> • Independent⁽¹⁾ • Chair • Not a member of any Committees
<p>Doug Haughey Calgary, Alberta, Canada</p> <p>Mr. Haughey has been a director since May 7, 2013 and was appointed Independent Lead Director on January 1, 2015. Mr. Haughey is a corporate director. Most recently he was Chief Executive Officer and director of Churchill Corporation, a position he held from August 2012 through May 2013. Prior to that, Mr. Haughey was President and Chief Executive Officer of Provident Energy. Mr. Haughey is a director of Fortis Inc. and served as the Chair from September 2016 to December 2022.</p>	<p>Mr. Haughey is:</p> <ul style="list-style-type: none"> • Independent • Independent Lead Director⁽¹⁾ • Chair, Governance and Sustainability Committee • Member, Human Resources Committee
<p>Isabelle Brassard Montreal, Quebec, Canada</p> <p>Ms. Brassard has been a director since June 9, 2022 and has been the Senior Vice President, Logistics and Sustainable Development of Fednav Limited, a privately-owned company in the maritime transport industry, since September 2020. Prior to joining Fednav, Ms. Brassard was the Vice President, Marine and Logistics with Rio Tinto Group, an ASX, LSE, NYSE and FTSE listed metals and mining corporation, from January 2018 until July 2020.</p>	<p>Ms. Brassard is:</p> <ul style="list-style-type: none"> • Independent • Member, Health, Safety and Environment Committee • Member, Human Resources Committee
<p>Michael Crothers Calgary, Alberta, Canada</p>	<p>Mr. Crothers is:</p>

Name, Residence, Principal Occupation, Period of Service as a Director, Other Issuers of which the Director is a Director	Position on Committees of the Board of Directors
<p>Mr. Crothers has been a director since June 1, 2021. Mr. Crothers is an independent businessman. Most recently, he was President and Country Chair for Shell Canada from January 2016 until his retirement in April 2021.</p>	<ul style="list-style-type: none"> • Independent • Member, Health, Safety and Environment Committee • Member, Governance and Sustainability Committee
<p>Blair Goertzen Red Deer, Alberta, Canada</p> <p>Mr. Goertzen has been a director since August 6, 2019. Mr. Goertzen is an independent businessman. Most recently, he was the President and Chief Executive Officer of Enerflex Ltd., a position he held from June 2011 until May 2019.</p>	<p>Mr. Goertzen is:</p> <ul style="list-style-type: none"> • Independent • Chair, Health, Safety and Environment Committee
<p>Gianna Manes Salem, South Carolina, U.S</p> <p>Ms. Manes has been a director since May 9, 2017. Ms. Manes is an independent businesswoman and corporate director. Ms. Manes is a director of Fortis Inc. and was the President and Chief Executive Officer of ENMAX Corporation from 2012 until her retirement in July 2020.</p>	<p>Ms. Manes is:</p> <ul style="list-style-type: none"> • Independent • Chair, Human Resources Committee
<p>Michael Norris Toronto, Ontario, Canada</p> <p>Mr. Norris has been a director since May 7, 2013. Mr. Norris is a corporate director. Mr. Norris was Deputy Chair of RBC Capital Markets from 2003 through 2012. Mr. Norris served as a director of Recipe Unlimited Corp. from 2015 through 2021. Mr. Norris is also a director for a number of private and non-profit organizations.</p>	<p>Mr. Norris is:</p> <ul style="list-style-type: none"> • Independent • Chair, Audit Committee
<p>Thomas O'Connor Denver, Colorado, U.S.</p> <p>Mr. O'Connor has been a director since January 6, 2014. He is currently an independent businessman. He was the Chairman and Chief Executive Officer of DCP Midstream LLC and Chairman of DCP Midstream Partners LP until 2013. Presently he sits on the board of New Jersey Resources.</p>	<p>Mr. O'Connor is:</p> <ul style="list-style-type: none"> • Independent • Member, Audit Committee • Member, Health, Safety and Environment Committee
<p>Charlene Ripley Vancouver, British Columbia, Canada</p> <p>Ms. Ripley has been a director since June 12, 2017 and has been the Senior Vice President and General Counsel at Teck Resources Limited since January 2023. Prior to joining Teck Resources Limited, Ms. Ripley was the Executive Vice Present and General Counsel at SNC-Lavalin Group Inc. from October 2019 to December 2022 and served as Executive Vice President, General Counsel at Goldcorp Inc., a TSX and NYSE-listed gold producer, from April 2013 to April 2019.</p>	<p>Ms. Ripley is:</p> <ul style="list-style-type: none"> • Independent • Member, Governance and Sustainability Committee • Member, Human Resources Committee
<p>Dean Setoguchi Calgary, Alberta, Canada</p> <p>Mr. Setoguchi has been the President and Chief Executive Officer of the Corporation since January 2021. Prior to his appointment, he has held senior management roles with the Corporation, including President and Chief Commercial Officer (February 2020 to December 2020), Senior Vice President and Chief Commercial Officer (2018-2020), and Senior Vice President, Liquids Business Unit (2014-2018). Mr. Setoguchi currently serves on the Board of the Calgary Food Bank.</p>	<p>Mr. Setoguchi is:</p> <ul style="list-style-type: none"> • Not Independent • Not a member of any Committees
<p>Janet Woodruff West Vancouver, British Columbia, Canada</p> <p>Ms. Woodruff has been a director since June 9, 2015. Ms. Woodruff is a corporate director. Previously, Ms. Woodruff held executive roles at BC Hydro, B.C. Transmission Corporation, Vancouver Coastal Health and Westcoast Energy. She serves as a director of Altus Group Limited, Ballard Power Systems and Capstone Infrastructure Corporation⁽²⁾. Ms. Woodruff was also a director of FortisBC Inc. and Fortis BC Energy Inc., both wholly owned subsidiaries of Fortis Inc., until March 2021.</p>	<p>Ms. Woodruff is:</p> <ul style="list-style-type: none"> • Independent • Member, Audit Committee • Member, Governance and Sustainability Committee

Notes:

- (1) Under Canadian securities laws, Mr. Bertram has been considered independent since June 1, 2019. Having regard to governance best practices which suggest a period longer than three years is appropriate in determining independence, Keyera decided to maintain Mr. Haughey as Independent Lead Director. For further information please see page 35 of the Corporation's Information Circular dated March 24, 2022 which is available on SEDAR at www.sedar.com.
- (2) Ms. Woodruff sits on the Board of Capstone Infrastructure Corporation (a wholly owned subsidiary of Irving Infrastructure Corp., which has preferred shares publicly traded on the TSX).

Executive Officers of the Corporation

The name, municipality of residence, position held and principal occupations for the five most recently completed financial years of the executive officers of the Corporation as of the date of this AIF are set out below:

Name and Municipality of Residence	Position with the Corporation	Principal Occupation
Dean Setoguchi Calgary, Alberta	President and Chief Executive Officer	President and Chief Executive Officer (since January 2021). Prior thereto, President and Chief Commercial Officer, Keyera, (March 2020 to December 2020); Senior Vice President, Chief Commercial Officer, Keyera, (December 2018 to February 2020); Senior Vice President, Liquids Business Unit, Keyera, (April 2014 to December 2018).
Jarrod Beztily Calgary, Alberta	Senior Vice President, Operations and Engineering	Senior Vice President, Engineering and Operations (since September 1, 2021). Prior thereto, Vice President, Operations, Gathering and Processing, Keyera (December 2018 to August 2021); Vice President, Operations, Liquids Business Unit, Keyera, (December 2015 to December 2018).
Nancy L. Brennan⁽¹⁾ Calgary, Alberta	Senior Vice President, Sustainability, External Affairs and General Counsel	Senior Vice President, Sustainability, External Affairs and General Counsel (since September 2021). Prior thereto, Senior Vice President, General Counsel and Corporate Secretary, Keyera (July 2019 to August 2021); Vice President, Corporate Legal and Corporate Secretary, Encana Corporation (now Ovintiv), (July 2015 to June 2019).
Desiree Crawford Calgary, Alberta	Senior Vice President, Safety, People and Technology	Senior Vice President, Safety, People and Technology (since May 2022). Prior thereto, Senior Vice President, Human Resources, Nutrien Ltd., a TSX and NYSE-listed agriculture company (August 2019 to June 2021); Vice President, Workforce Strategy, Nutrien, Ltd. (January 2018 to August 2019).
Eileen Marikar Calgary, Alberta	Senior Vice President, Chief Financial Officer	Senior Vice President, Chief Financial Officer (since May 2020). Prior thereto, Vice President, Finance, Keyera, (March 2019 to May 2020); Vice President, Controller, Keyera, (February 2014 to March 2019).
Jamie Urquhart Calgary, Alberta	Senior Vice President, Chief Commercial Officer	Senior Vice President, Chief Commercial Officer (since September 2020). Prior thereto, Vice President, Marketing, Keyera (December 2018 to September 2020); Vice President, Operations, Gathering and Processing, Keyera (February 1, 2017 to December 2018).

Notes:

- (1) Ms. Brennan resigned from Keyera effective February 28, 2023.

Share Ownership by Directors and Executive Officers

As at December 31, 2022, the directors and executive officers of the Corporation described above, as a group, beneficially owned or exercised control or direction over 1,064,836 Common Shares

representing approximately 0.46% of the Common Shares issued and outstanding as at December 31, 2022.

Committees of the Board of Directors

Subject to applicable law, the Board of Directors may establish and delegate powers, duties and responsibilities to committees. Effective January 1, 2022, the Board of Directors restructured its committees. The Audit Committee and Health, Safety and Environment Committee remained unchanged. The former Compensation and Governance Committee was disbanded and in its place the Board established the Compensation and Human Resources Committee and the Governance and Sustainability Committee, allowing for increased Board oversight of governance and sustainability matters. See: “Environmental, Social and Governance Matters – Environmental Stewardship – ESG Governance”. The written terms of reference for each committee are available on the Keyera website at www.keyera.com.

Conflicts of Interest

Circumstances may arise where members of the Board of Directors serve as directors or officers of corporations which are suppliers or customers of Keyera. No assurances can be given that such circumstances will not give rise to a conflict of interest. Keyera’s Code of Business Conduct requires that any real or potential conflict of interest be disclosed and dealt with in accordance with the requirements of its Conflict of Interest Policy and applicable laws. The Compensation and Governance Committee closely monitors relationships among the members of the Board of Directors to ensure that business associations do not affect the Board’s performance. In a circumstance where a director declares an interest in any material contract or material transaction being considered at a meeting, the director generally absents himself or herself from the meeting during the consideration of the matter and does not vote on the matter. See “Environmental, Social and Governance Matters – Ethical Business Conduct”.

Cease Trade Orders, Bankruptcies, Fines or Sanctions

To the Corporation’s knowledge, based on information supplied by the directors and executive officers, no director, executive officer or Shareholder holding a sufficient number of securities to affect materially the control of Keyera (nor any personal holding company of any such individuals) (i) has, within the 10 years preceding the date of this AIF become bankrupt, made a proposal under legislation relating to bankruptcy or insolvency or become subject to or instituted any proceedings, arrangement or compromise with creditors, or had a receiver, receiver manager or trustee appointed to hold its assets, or (ii) has, as of the date of this AIF or within the 10 years preceding the date of this AIF, been a director or executive officer of any company (including the Corporation) that, while the person was acting in that capacity (or within a year of ceasing to act in that capacity), became bankrupt, made a proposal under any legislation relating to bankruptcy or insolvency or was subject to or instituted any proceedings, arrangement or compromise with creditors or had a receiver, receiver manager or trustee appointed to hold its assets, save and except for Mr. Setoguchi, who was an officer of Laricina Energy Ltd. (“**Laricina**”) for a period of time ending one year less a day prior to the date on which Laricina filed for creditor protection under the *Companies’ Creditors Arrangement Act* (Canada) (“**CCAA**”). Laricina subsequently emerged from CCAA protection on February 1, 2016.

Further, to the knowledge of the Corporation, and based upon information provided to it by the directors and executive officers, no director or executive officer of the Corporation (nor any personal holding company of any such individuals) has, as of the date of this AIF or within the 10 years preceding the date of this AIF, been a director, chief executive officer or chief financial officer of any company (including the Corporation) that, during the time the director or executive officer was acting in such capacity or as a result of events that occurred while the director or executive officer was acting in such capacity, was subject to a cease trade order, an order similar to a cease trade order or an order that denied the relevant company access to any exemption under securities laws, in each case, that was in effect for a period of more than 30 consecutive days.

AUDIT COMMITTEE INFORMATION

Audit Committee Members and Terms of Reference

The Audit Committee is appointed annually by the Board of Directors. The responsibilities and duties of the Audit Committee are set forth in the Audit Committee Terms of Reference attached hereto as Schedule "A". The Audit Committee consists of three members, each of whom is independent and financially literate as defined by National Instrument 52-110 *Audit Committees*. The following table sets out the relevant education and experience of the members of the Audit Committee:

NAME	RELEVANT EDUCATION AND EXPERIENCE
Michael Norris <ul style="list-style-type: none"> • Independent • Financially Literate 	<p>Mr. Norris, the Chair of the Audit Committee, holds a Bachelor of Engineering from Queens University and Master of Business Administration from the Richard Ivey School of Business, University of Western Ontario. Mr. Norris was Deputy Chair of RBC Capital Markets from 2003 through 2012. Prior to his appointment as Deputy Chair, Mr. Norris held numerous positions with RBC Capital Markets, including Head of the Energy Practice from 1992 through 1998 and Head of Global Investment Banking from 1998 through 2003. Prior to RBC, Mr. Norris held roles at Mobil Oil and Gulf Canada Resources. Mr. Norris has experience serving on the boards of private and public companies, and non-profit organizations. His experience has provided him with extensive knowledge of financial and accounting issues, as well as disclosure and internal control procedures.</p>
Thomas O'Connor <ul style="list-style-type: none"> • Independent • Financially Literate 	<p>Mr. O'Connor holds a Bachelor of Science degree in Biology, cum laude, and a Master of Science degree in Environmental Studies from the University of Massachusetts at Lowell and has completed the Harvard Business School Advanced Management Program. He was the Chairman and Chief Executive Officer of DCP Midstream LLC and Chairman of DCP Midstream Partners LP. Prior to that he held executive positions at Duke Energy Corp., including Chief Executive Officer of Duke Energy Gas Transmission. Mr. O'Connor has served on various public boards and is well versed in financial and accounting matters, as well as disclosure and internal control procedures.</p>

NAME	RELEVANT EDUCATION AND EXPERIENCE
Janet Woodruff <ul style="list-style-type: none"> • Independent • Financially Literate 	Ms. Woodruff holds a Bachelor of Science (Honours) from the University of Western Ontario and a Master of Business Administration from York University. She holds the Corporate Director (ICD.D) designation from the Institute of Corporate Directors and is also a member of the Chartered Professional Accountants of Canada. Ms. Woodruff is an experienced corporate director and executive with Board and C-suite experience in corporations in energy, transportation and health sectors, including her most recent role as acting Chief Executive Officer of Transportation Investment Corporation. Previously she held executive roles at BC Hydro, BC Transmission Corporation, Vancouver Coastal Health and Westcoast Energy. Ms. Woodruff has served on various boards and has extensive knowledge in the areas of accounting, financial reporting, internal controls and disclosure.

Principal Accountant Fees and Services

In 2022 and 2021, fees billed for audit, audit-related, tax and other services provided to Keyera by Deloitte LLP were as follows:

Year Ended December 31	2022	2021
Audit Fees	\$1,133,337	\$504,799
Audit Related Fees	\$250,380	\$200,413
Tax Fees	\$0	\$0
All Other Fees	\$11,413	\$8,463
Total	\$1,395,130	\$713,675

A description of the nature of the services provided under each category is as follows:

- **Audit Fees:** Fees for the annual audit and quarterly review of the Corporation's financial statements and for audit services related to ongoing regulatory filings.
- **Audit Related Fees:** Fees for review and translation services related to non-routine regulatory filings such as prospectuses.
- **Tax Fees:** Fees for advice and assistance in preparing transfer pricing documentation for KEI and advice related to income tax and commodity taxes.
- **All Other Fees:** Fees for products and services provided by the Corporation's auditors other than those described as "Audit Fees", "Audit Related Fees" and "Tax Fees".

Pre-Approval Policies

Pursuant to the Terms of Reference of the Audit Committee, the Audit Committee approves all audit plans and pre-approves significant non-audit engagements of the external auditors, including reviewing the fees paid for such engagements. The Audit Committee has delegated the responsibility for approving certain non-audit services to the Chair of the Audit Committee. All audit and non-audit services provided to Keyera for the year ended December 31, 2022 that were required to be pre-approved were pre-approved in accordance with the policies and Terms of Reference of the Audit Committee.

RISK FACTORS

In carrying out its business and operations, Keyera deals with a number of risks. Generally, Keyera's risks fall into two principal categories: (i) operational risks, including legal, regulatory and strategic risks; and (ii) financial risks. These categories are outlined below along with summaries of the specific risk factors within each general category. In some instances, risks may fall into both categories. In such cases Keyera classified risks based on the primary category in terms of how they affect Keyera. The most significant risks in each category are listed first, based on Keyera's current assessment of each risk. To the extent Keyera's business or operations are affected by these risks, there could be an adverse effect on Keyera's financial performance, the trading price of Keyera's securities, cash flow available to pay dividends and the ability of Keyera to fund its debt obligations.

Keyera continually works to identify and evaluate significant risks and to develop and maintain appropriate strategies to mitigate the impact of potential risks to its business. Keyera's approach to risk management is integrated into its overall approach to decision making (both formal and informal) and also includes formal risk reviews with respect to certain matters. The summary provided below describes the main risks known to Keyera and also identifies some of the steps that Keyera takes to mitigate these identified risks.

Readers should carefully consider the risk factors set out below and consider all information contained in this AIF and in Keyera's other public filings before making an investment decision in respect of any securities of Keyera. This summary does not provide an exhaustive list of all risks to Keyera. Further, many of the risks are beyond Keyera's control and, in spite of Keyera's active management of its risk exposure, there is no guarantee that risk management activities will successfully mitigate such exposure.

Operational Risks

Reliance on Producer Activity and Long Term Declines

The volumes of natural gas, NGLs, iso-octane, sulphur, crude oil, and other products gathered, transported, produced, or processed by Keyera depend on production of natural gas and crude oil. Without reserve additions, production will decline over time as reserves are depleted. Most of Keyera's facilities are located in or depend on the WCSB. Although new technology has allowed producers to access and produce reserves that were previously viewed as uneconomic, such advances in technology may not offset the natural declines. As well, industry activity levels depend upon economic and regulatory conditions that permit and incent producers to explore for and develop reserves. Producers in the areas serviced by Keyera's gas plants may not be successful in exploring for and developing additional reserves, may determine that the reserves are uneconomic to produce, or may be unwilling or unable to make the expenditures necessary to do so. Further, with current commodity pricing dynamics compounded by product egress challenges in the WCSB, some producers have slowed or modified their exploration and development plans in Western Canada. Keyera cannot predict the impact of future economic conditions on the energy and petrochemical industries or future demand for and prices of petroleum products. These and other factors, such as higher development costs or royalties, global and North American commodity inventory levels and infrastructure constraints, may discourage further producer exploration and development. A reduction in exploration and development activities or the curtailment of production (whether due to regulatory or governmental requirements, market constraints or voluntarily by producers) could result in declines in throughput at gas plants, pipelines, terminals and NGL processing facilities.

The rate and timing of production from natural gas reserves tied-in to the gas plants are at the discretion of the producers and are subject to regulatory constraints. The producers have no obligation to produce natural gas from these lands. Producers may suspend their drilling programs or shut in production as a result of lower product prices, higher production costs or a lack of capital. Where possible, Keyera attempts to negotiate area dedications or take-or-pay arrangements with producers. However, a significant portion of the natural gas reserves in the areas connected to Keyera's gas plants in West Central Alberta

is not contractually dedicated for processing at those gas plants and the majority of the reserves which are subject to processing obligations may be terminated on less than six months' notice.

Natural gas rich in NGLs typically improves the economics associated with natural gas production and is therefore more attractive to producers. While Keyera's gas processing facilities have the capacity to extract NGLs and are located in areas where the natural gas reserves are rich in NGLs, there is no guarantee that this factor will be sufficient to encourage continued gas exploration and development around Keyera's facilities. Keyera's future growth plans for its Liquids Infrastructure business depends partly on the growth of NGL production in the WCSB, including from Keyera-owned gas plants.

There is also risk associated with Keyera's customers being able to perform their contracted obligations. For example, customers may not comply with their contracted obligations (counterparty risk) or may not deliver volumes consistent with their production profile (volume risk), all of which could adversely affect Keyera's financial results, including the returns on capital investments.

Keyera's future growth plans for its Liquids Infrastructure business depend to a significant degree on producer activities in the Alberta oil sands. Oil sands activity can be affected by many factors, including but not limited to: commodity prices and pricing differentials; access to transportation and take-away capacity; environmental pressures (including but not limited to emissions and water use regulations, management of tailings ponds, and public perceptions with respect to the environmental impact of these operations); curtailment of oil production; access to capital; and cost escalation. Over the last few years, several oil sands producers announced delays in projects and overall interest in new investment in the oil sands appears to have declined. As well, oil sands producers are continuing to explore new technologies that would reduce the volume of condensate required as diluent. If these trends continue, they may result in lower than expected demand for Keyera's Liquids Infrastructure services and fewer opportunities to earn margin on condensate imports in Keyera's Marketing business and fees from Keyera's condensate infrastructure.

Operational Matters and Hazards

Keyera's operations are subject to hazards common to the natural gas (sweet and sour), NGL and crude oil handling business. Keyera transports significant volumes of hydrocarbons by rail and truck, which may be more prone to accidents and mishaps than pipeline transportation of hydrocarbons. The operation of Keyera's assets involves many risks, including: the breakdown or failure of equipment, information systems or processes; the performance of equipment at levels below those originally intended (whether due to declining throughput, misuse, unexpected degradation or design, construction or manufacturing defects); failure to maintain an adequate inventory of supplies or spare parts; the compromise of information and control systems; operator error; labour shortages and disputes; disputes with owners of interconnected facilities and carriers; releases of harmful substances into the environment; spills associated with the loading and unloading of harmful substances onto rail cars and trucks; delay of or restriction of operations due to climate change policies, initiatives and costs; and catastrophic events, including, but not limited to, those related to climate change and extreme weather events, such as natural disasters, fires, explosions, derailments, fractures, well blowouts, acts of terrorists and saboteurs, widespread epidemics and pandemic outbreaks, and other similar events, many of which are beyond the control of Keyera. See "Weather Conditions" below. The occurrence or continuance of any of these events could increase the cost of operating Keyera's facilities and/or reduce its processing or throughput capacity, or result in damages, claims or fines, environmental damages, personal injury or loss of life, all of which could adversely affect Keyera's operations, reputation and financial performance.

The integration of Keyera's business and operations may also give rise to risks, as the impact of and operational upset or business interruption in one part of its business may create implications for other parts of Keyera's operation or business. For example, a significant disruption to the integrated value chains of butane, which includes being the feedstock for production of iso-octane at Keyera's AEF facility, and condensate, for Keyera's oil sand customers, could have impacts on Keyera's Gathering and Processing, Liquids Infrastructure and/or Marketing businesses. See "Reliance on Other Facilities and Third-Party

Services”, “Information Technology Systems and Cyber Security”, “Changes in Laws” and “Transportation of Dangerous Goods”.

Keyera carries casualty and business interruption insurance with amounts of coverage customary for similar business operations to help defray the costs associated with the foregoing risks should they materialize; however, such insurance coverages may not be sufficient to compensate for all business or casualty losses or damages and/or may not be available. See “Financial Risks – Adequacy of Insurance”.

Inflation

The general rate of inflation impacts the economies and business environments in which Keyera operates. Increased inflation and any economic conditions resulting from governmental attempts to reduce inflation, such as the imposition of higher interest rates or wage and price controls, may negatively impact levels of demand for Keyera’s services and cost of inputs, and could, accordingly, have a material adverse effect on Keyera’s business, financial condition and results of operations. Higher interest rates as a result of inflation could negatively impact Keyera’s borrowing costs, which could, in turn, have a material adverse effect on Keyera’s cash flow and ability to service obligations under its debt securities and other debt obligations. See “Interest Rates”.

Reliance on Other Facilities and Third-Party Services

Keyera’s facilities are connected to various third-party pipeline systems, including the Alliance, Pembina, Inter Pipeline (now Brookfield), Enbridge and TC Energy systems, as well as raw gas gathering systems that feed Keyera’s gas plants. These connections are important to Keyera and its customers as they provide critical transportation routes, both from the perspective of delivering product to Keyera facilities (e.g., raw gas to feed Keyera’s gas plants, NGL mix to feed Keyera’s fractionation facilities, and condensate deliveries to feed Keyera’s condensate system) and providing product egress. Keyera also relies on a variety of third-party facilities, both upstream and downstream from its operations and third-party services. Risks may be created as a result of: differences in pressures; specifications or capacities which affect operations; planned and unplanned outages or curtailments at third-party facilities that restrict deliveries from Keyera facilities; and measurement and component balancing errors affecting product deliveries. As well, there may be issues with respect to scheduling and service delivery by third parties that affect Keyera’s operations, such as the scheduling and availability of timely and reliable rail service by the railway companies on which Keyera relies to move product. Operational disruptions, apportionment, regulatory action and other events on third-party systems and infrastructure may prevent the full utilization of Keyera’s facilities, require Keyera to spend additional capital, or otherwise hamper Keyera’s business activities.

Keyera is also impacted by the development or lack of development of pipeline infrastructure providing product egress from the WCSB. Without incremental project egress options, it is possible that pricing differentials and supply/demand dynamics will continue to disadvantage the WCSB, which may have an adverse effect on Keyera’s business.

Keyera is unable to control operations, events, decisions, regulatory actions or public perceptions with respect to third-party facilities, making the mitigation of these risks challenging. Although Keyera employs strategies to assist in mitigating these risks, including having multiple connections, service arrangements or transportation alternatives available in order to provide some flexibility during curtailments or interruptions, there is no assurance such strategies will be effective. Where such alternatives are not available or are not effective, Keyera’s operations can be significantly affected. If producers cannot secure adequate take-away capacity for their sales gas, it adversely affects the volume of raw inlet gas and associated NGLs that Keyera can accept at its facilities. Another example is curtailments at certain third-party ethane facilities which have affected ethane deliveries and sales from Keyera facilities. Keyera relies predominantly on rail service to transport its iso-octane to its primary markets located outside of Alberta and therefore inadequate rail service could trigger a need to cutback operations at AEF. In 2019, a rail strike impacting CN’s operations temporarily suspended propane rail shipments across CN’s network, including Keyera’s rail facilities.

Impacts of Geopolitical Events in Eastern Europe

The current conflict between Ukraine and Russia and the international response has, and may continue to have, potential wide-ranging consequences for global market volatility and economic conditions, including energy and commodity prices, which may, in turn, increase inflationary pressures and interest rates. Certain countries, including Canada and the United States, have imposed strict financial and trade sanctions against Russia, which have, and may continue to have, far-reaching effects on the global economy and energy and commodity prices.

The short-, medium- and long-term implications of the conflict in Ukraine are difficult to predict with any certainty at this time and there remains uncertainty relating to the potential direct and indirect impact of the conflict on Keyera, and it could have a material and adverse effect on the Corporation's business, financial condition and results of operations. Depending on the extent, duration, and severity of the conflict, it may have the effect of heightening many of the other risks described herein, including, without limitation, the risks relating to Keyera's exposure to commodity prices; the successful completion of Keyera's growth and expansion projects, including the expected return on investment thereof; supply chains and Keyera's ability to obtain required equipment, materials or labour; cybersecurity risks; inflationary pressures; and restricted access to capital and increased borrowing costs as a result of increased interest rates.

Facilities Throughput and Utilization Rates

Some of Keyera's facilities may operate at lower throughputs compared to their respective licensed or operating capacities. This may be due to a multitude of factors, including: declines in production; decisions by producers to delay or shut in production; actual production delivered by customers to Keyera facilities not aligning with production profiles; operational issues or constraints in certain functional units within the facilities; operating conditions; changes in gas or NGL composition; low commodity prices; use of competitors' facilities; infrastructure or service bottlenecks and logistical issues; inventory or market constraints for particular commodities; and other reasons. There may also be times when Keyera's facilities experience capacity constraints due to increasing throughput. In certain circumstances, the increased throughput may contribute to operating conditions that are not in line with the operational design of the facility.

The demand for midstream services depends, in part, on factors such as the quality of services offered, the cost of such services and the physical capabilities of the facilities. At Keyera's AEF facility, utilization may also be affected by demand for high octane, low vapour pressure gasoline additives, the willingness of customers to pay a premium price for this product, as well as availability of feedstock (butane) and storage and transportation (particularly rail service) capacity. Keyera cannot predict the impact of future economic conditions, fuel conservation measures, alternative fuel requirements, governmental regulation or technological advances in fuel economy and energy generation devices, all of which could reduce the demand for oil, natural gas, NGLs, sulphur or iso-octane, thereby potentially reducing utilization rates at Keyera's facilities.

Infrastructure and Service Interruptions

If certain pipelines and related infrastructure, whether owned and operated by Keyera or by third parties, were to become unexpectedly unavailable for delivery of current or future volumes of natural gas because of repairs, damage, spills or leaks, or any other reason, it could have a material adverse impact on Keyera's business operations and financial results. In addition, operating issues resulting from maturing infrastructure such as leaks, equipment problems and incidents, including, without limitation, explosions and fire, could result in legal liability, repair and remediation costs, increased operating costs, increased capital expenditures, regulatory fines and penalties, and other costs and a loss of customer confidence. Any liabilities resulting from the occurrence of these events may not be fully covered by insurance or rates.

Service interruption incidents that may arise through unexpected major power disruptions to facilities or pipeline systems, third-party negligence or unavailability of critical replacement parts could

cause Keyera to be unable to safely and effectively operate its assets. This could adversely affect Keyera's business operations and financial results.

Environmental and Public Safety Regulation and Considerations

Keyera's activities are regulated by federal, provincial and municipal environmental laws and regulations, which impose, among other things, restrictions, liabilities and obligations in connection with the handling, use, storage, transportation, treatment and disposal of hazardous substances and waste, and in connection with spills, releases and emissions of various substances into the environment. Environmental risks from Keyera's operating facilities typically include: air emissions, such as sulphur dioxide, nitrogen oxides, particulate matter and greenhouse gases; potential impacts on land, including land reclamation or restoration following construction; the use, storage or release of chemicals or hydrocarbons; the generation, handling and disposal of wastes and hazardous wastes; and water impacts.

Keyera uses freshwater for below-ground cavern storage operation, as well as for other operational uses such as cooling water, boiler water or miscible flooding for production. All Keyera facilities are a low or low-medium overall water risk according to the WRI Aqueduct Risk Tool; however, there are some regions where Keyera has or could experience difficulty in obtaining withdrawals/operations permit due to regulatory constraints.

Environmental legislation also requires that facilities, pipelines and other properties associated with Keyera's operations be operated, maintained or abandoned and reclaimed to comply with changing regulations and standards to the satisfaction of applicable regulatory authorities. Many of Keyera's facilities are subject to licensing requirements imposed by provincial and/or federal regulators. These licenses must be renewed from time to time and there is no guarantee that any such license will be renewed on the same or similar conditions or without additional cost. In addition, certain types of activities may require the submission and approval of environmental impact assessments or permit applications. If at any time regulatory authorities deem any of Keyera's facilities not in compliance with applicable laws, they may impose fines or penalties or order suspension of operations at such facilities.

Provincial and federal governments may also take steps to impose stricter regulations and emission limits on greenhouse gas or other emissions in the near term. See "Regulatory Framework – Greenhouse Gas and Emissions Regulation". If it is determined that emissions exceed permitted limits, regulatory requirements will be triggered that require action to be taken to reduce emission levels to acceptable levels, unless an extension or relaxation is granted. There can be no assurance that any extension of time to achieve compliance would be granted, and immediate compliance may not be possible. Failure to comply with current or future regulations could have a material adverse effect on Keyera's business and financial results. Overall, there is some uncertainty surrounding the impact of environmental laws and regulations on Keyera's operations, and it is difficult to predict how these laws and regulations may evolve. At this time, Keyera does not anticipate that it will be affected in a manner materially different than any other comparable midstream business. However, because Keyera has many older facilities, particularly in its Gathering and Processing business, it is possible that it will face more challenges in achieving future compliance or higher compliance costs compared to newer facilities. The risk created by greenhouse gas and emissions considerations may be interrelated to other risks faced by Keyera, including weather risk, climate change risk, reputational risk, changes in laws and operational risks discussed elsewhere in this "Risk Factors" section.

Given the nature of sour gas, certain public safety and environmental risks are inherent in the handling and gas sweetening processes at Keyera's facilities. As well, some of Keyera's pipelines and facilities run through or are immediately adjacent to heavily populated areas, including Edmonton, Alberta. Major equipment failure, a release of toxic substances or a pipeline rupture (including as a result of third-party contact or impact to the pipeline) could result in damage to the environment and Keyera's facilities, death or injury and substantial costs and liabilities to third parties. Although Keyera carries control of well insurance and sudden and accidental pollution coverage under its commercial general liability insurance policy with limits and coverage that are customary for similar business operations, there can be no assurance that the types of insurance and the amounts for which Keyera is insured, or the proceeds of

such insurance, will compensate Keyera fully for its losses. Further, if, at any time, appropriate regulatory authorities deem any one of the pipelines or facilities unsafe, they may impose fines or penalties or order its operation to be suspended. See “Financial Risks – Adequacy of Insurance”.

Climate Change, Carbon Tax and the Transition to a Lower Carbon Economy

Public support for climate change action and receptivity to alternative/renewable energy technologies has grown in recent years. There has been increased environmental activism and public opposition to the continued exploitation, development and transportation of fossil fuels, and in relation to the oil sands in particular. Laws, the political landscape in Canada and abroad, regulations, policies, obligations, social attitudes and customer preferences relating to climate change and the transition to a lower carbon economy could have an adverse impact on Keyera’s business, including less demand for Keyera’s products and services, increased costs from compliance, litigation and regulatory or litigation outcomes, and could lead to Keyera’s current operations becoming less profitable or uneconomic. Furthermore, technological improvements or innovations that support the transition to a lower carbon economy and customer preferences or regulatory incentives that alter fuel or power choices could impact demand for oil and gas.

Governments in Canada and around the world have responded to these shifting societal attitudes by adopting ambitious emissions reduction targets and supporting legislation, including measures relating to carbon pricing, limitations on oil and gas exploration and development, clean energy and fuel standards, and alternative energy incentives and mandates. Existing and future laws and regulations in support of a transition to a low-carbon energy and climate change action may impose significant constraints on fossil fuel development. Concerns over climate change, greenhouse gas emissions, and water and land-use practices could lead governments to enact additional or more stringent laws applicable to Keyera and other companies in the energy industry in general, and in the oil sands industry in particular. Some of Keyera’s significant facilities may be subject to future provincial, state, or federal climate change regulations to manage greenhouse gas emissions. See the “Regulatory Framework – Greenhouse Gas and Emissions Regulations” section of this AIF. The direct or indirect costs of compliance with these regulations may have a material adverse effect on Keyera’s business, financial condition, results of operations, and prospects. Keyera’s business could also be indirectly impacted by laws and regulations that affect its customers or suppliers to the extent such changes result in reductions in the use of natural gas, limit the operations of, or increase the costs faced by producers. Given the evolving nature of climate change and the control of greenhouse gas emissions and resulting requirements, it is difficult to predict the impact of any such legal, regulatory or policy changes on Keyera and its operations and financial condition. However, these developments and future developments could adversely impact Keyera’s business, reputation, competitiveness, access to capital markets, financial condition, results of operations and prospects.

Keyera may invest in opportunities related to energy transition by pursuing new low-carbon services and business models that leverage the current asset base and support Keyera’s customers. Such investments may involve certain risks and uncertainties in addition to those identified herein in respect of Keyera’s existing businesses, operations and assets, including the obligation to comply with additional regulatory and other legal requirements associated with such businesses, operations or assets and the potential requirement for additional sources of capital to make, develop and/or maintain such investments and Keyera’s ability to access such sources of capital. In the event Keyera were to complete such investments, there can be no guarantee that Keyera will realize a return on those investments or businesses, operations or assets that is similar to the returns it receives in respect of its existing business, operations and assets or that would offset any loss in revenue from, or the value of, Keyera’s existing pipelines, facilities and other infrastructure assets resulting from the impact of the potential energy transition. As a result, any such investment could have an adverse effect on Keyera’s financial performance, the trading price of Keyera’s securities, cash flow available to pay dividends and the ability of Keyera to fund its debt obligations.

Greenhouse Gas Emissions and Targets

Keyera has committed to reducing greenhouse gas emissions intensity of its operations by 25 percent by 2025 and 50 percent by 2035 relative to 2019 levels. Keyera's ability to lower greenhouse gas emissions in respect of its emissions intensity reduction targets is subject to numerous risks and uncertainties, and Keyera's actions to implement these objectives may also expose it to certain additional and/or heightened financial and operational risks. A reduction in greenhouse gas emissions intensity relies on, among other things, Keyera's ability to implement and improve operational and emissions efficiencies at all facilities, invest in new technologies and transition to greater use of lower emission energy sources. In the event that Keyera is unable to implement these strategies and technologies as planned without negatively impacting its expected operations or business plans, or in the event that such strategies or technologies do not perform as expected, Keyera may be unable to meet its greenhouse gas emissions intensity reduction targets or goals on the current timelines, or at all.

In addition, achieving Keyera's greenhouse gas emissions intensity reductions target and goals could require significant capital expenditures and resources, with the potential that the costs required to achieve such target and goals materially differ from Keyera's original estimates and expectations, which differences may be material. In addition, while the intent is to reduce emissions from Keyera's base operations by optimizing its assets, investing in technology, and supporting renewables, the shift in resources and focus towards greenhouse gas emissions reduction could have a negative impact on Keyera's operating results. The overall final cost of investing in and implementing a greenhouse gas emissions intensity reduction strategy and technologies in furtherance of such strategy, and the resultant change in the deployment of Keyera's resources, could have a material adverse effect on Keyera's business, financial condition and results of operations.

Changing Expectations from Stakeholders

Keyera's operations, projects and growth opportunities require Keyera to have strong relationships with key stakeholders, including local communities, Indigenous communities and other groups directly impacted by Keyera's activities, as well as governments and government agencies, investor advocacy groups, certain institutional investors, investment funds and others which are increasingly focused on ESG practices. Keyera has long been committed to strong ESG practices and performance, and in 2021 and 2022 released Keyera's 2021 Climate Report and 2021 ESG Report, respectively, which outline Keyera's energy transition strategy, which includes lowering both emissions and operating costs from Keyera's base operations, while at the same time pursuing strategic, lower-carbon commercial opportunities arising from the energy transition. Inadequately managing expectations and issues important to stakeholders, including those related to environment and climate change, could impact stakeholder trust and confidence and Keyera's reputation and have negative impacts on Keyera's business, operations or financial results including loss of business, loss of ability to secure growth opportunities, delays in project execution, legal action, loss of ability to obtain and maintain necessary approvals and permits from governments and regulatory agencies on a timely basis and on acceptable terms, changing investor sentiment regarding investment in oil and gas industry or Keyera, restricted access to and cost of capital and loss of ability to hire top talent.

Keyera is also exposed to a risk of higher costs, delays, project cancellations, new restrictions or cessation of operations due to increasing pressure on governments and regulators. Recent judicial decisions have increased the ability of groups to make claims and oppose projects in regulatory and legal forums. In addition to issues raised by groups focused on particular project impacts, Keyera and others in the energy business are facing organized opposition to oil and gas extraction and shipment of oil and gas products.

Some groups are pressuring certain investors to divest their investments in oil and gas companies. If this were to continue, it could have a material adverse effect on the price of Keyera's securities and Keyera's ability to access capital markets. Some groups are also pressuring commercial and investment banks from financing oil and gas companies. Furthermore, according to press reports, some financial institutions are also considering limiting their exposure to certain oil and gas projects. Accordingly, Keyera's

ability to use financing for future projects may be adversely impacted. This could also adversely impact Keyera's potential partners' ability to finance their portion of costs, either through equity or debt.

Construction Project Timing and Cost

Keyera has certain major projects currently under development and the successful completion of these projects is dependent on a number of factors and subject to a number of potential risks, including: general economic, business and market conditions; availability of capital at attractive rates; receipt of regulatory approvals; supply and demand; inflation; labour, materials and equipment availability; contractor non-performance; acts of civil protest or disobedience; terrorism or sabotage; weather conditions; cost of engineering services, and other factors that are outside of Keyera's control. As these projects are undertaken, required approvals may not be obtained, may be delayed or may be obtained with conditions that materially alter the expected return associated with the underlying projects. Moreover, Keyera may incur financing costs during the planning and construction phases of its growth projects.

Generally, the cash flows Keyera expects these projects to generate will not materialize until after the projects are completed. In addition, construction delays or increased costs associated with capital projects could reduce project returns or prevent Keyera from meeting its contractual "in service" commitments. Further, these projects may be completed behind schedule or in excess of budgeted cost. For example, Keyera must compete with other companies for the materials and construction services required to complete these projects, and competition for these materials or services could result in significant delays and/or cost overruns. As a result, the cost estimates and completion dates for Keyera's major projects can change at different stages of the project. Accordingly, actual costs can vary from these estimates and these differences can be material. Significant cost overruns may adversely affect the economics of particular projects, as well as Keyera's business operations and financial results. Further, there is a risk that maintenance will be required more often than currently planned or that significant maintenance capital projects could arise that were not previously anticipated. Keyera can face facility start up challenges which could defer volumes and cashflows.

Changes in Laws

The oil and gas industry, including the midstream industry, is subject to regulation and intervention by governments in such matters as environmental protection, international trade laws and tariffs, exploration and development activities, licensing, operation and expansion of wells and facilities, and abandonment and reclamation of facilities. The laws and administrative policies relating to the oil and gas industry, including the midstream industry, may be changed in a manner that could adversely affect Keyera or its Shareholders.

In addition to being affected by changes aimed directly at midstream facilities, Keyera could also be adversely affected by changes in regulations or policies directed at upstream activities, such as land sales, exploration and development in the capture areas surrounding Keyera's facilities, as well as changes directed at downstream activities, including retail and consumer uses. In addition, Keyera could be adversely affected by the imposition of additional emission limits for greenhouse gases in Canada or the U.S. See "Environmental, Social and Governance Matters – Environmental Programs" and "Regulatory Framework – Greenhouse Gas and Emissions Regulation".

Changes to federal environmental assessment requirements have raised a number of concerns for the oil and gas industry and created uncertainty for project proponents and the ability to secure approvals for projects may be adversely affected. This could affect Keyera directly if any of its potential future projects become subject to the new environmental assessment requirements, or indirectly if any proposed new laws become a deterrent to the development of oil and gas in Canada. Regulatory uncertainty and ongoing regulatory change in Canada contributes to an uncertain investment climate, which has implications for industry activity levels, investor perceptions, and the ability to accurately forecast future costs and obligations. See "Regulatory Compliance, Approvals and Interventions" below.

Tax laws relating to Keyera may be changed (or the interpretation thereof may change) in a manner resulting in tax consequences that materially differ from those contemplated by Keyera across the jurisdictions in which Keyera has operations or sales which may create a risk of non-compliance and re-assessment. Such changes may include, without limitation, taxation and tax policy changes, tax rate changes, new tax laws, and revised tax law interpretations that may individually or collectively cause an increase in Keyera's effective tax rate. While Keyera believes that its tax filing positions are appropriate and supportable, it is possible that tax authorities may: (a) amend tax legislation or the interpretation thereof may change, or (b) successfully challenge Keyera's interpretation of tax legislation which may affect Keyera's estimate of current and future income taxes affecting the financial condition, prospects, and cash flow available to pay dividends to Keyera's Shareholders.

Sanctions laws, which restrict the counterparties with whom Keyera can deal, have continued to change and require diligence to ensure compliance. Because both the nature of the business in which Keyera's counterparties engage and sanction lists can change with little notice, compliance can be challenging. Although Keyera attempts to screen its counterparties to confirm compliance, such processes may not be completely successful, and failure to comply may result in fines and penalties, and could also result in a breach of material contracts.

In the event of other legislative or regulatory changes, Keyera's ability to conduct business may be adversely affected, which could thereby have a negative effect on distributable cash flow and the dividends it provides to its Shareholders.

First Nations and Indigenous Communities: Consultation and Claims

Indigenous peoples have claimed aboriginal title and rights to a substantial portion of lands in western Canada. Keyera operates in territories in which such claims have been advanced. Such claims, if successful, could have a significant adverse effect on matters including, without limitation, natural gas production or oil sands development in Alberta, which in turn could have a material adverse effect on Keyera's business and operations, including the volume of natural gas and NGLs handled through Keyera's facilities. Additionally, some types of claims may affect or limit Keyera's ability to secure locations for capital projects.

The interpretation of aboriginal and treaty rights is evolutionary and government policy (including the requirements that are imposed on industry) continues to change. In Canada, the federal and provincial governments (the "**Crown**") have a duty to consult and, where appropriate, accommodate Aboriginal people where the interests of the Aboriginal peoples may be affected by a Crown action or decision. Crown actions include the decision to issue a regulatory approval relating to activities that may impact the Aboriginal rights, interests or lands. The Crown may rely on steps undertaken by a regulatory agency to fulfill its duty to consult and accommodate in whole or in part. Therefore, the processes established by regulatory bodies often include an assessment of Aboriginal rights claims and consultation obligations. While the Crown holds ultimate responsibility for ensuring consultation is adequate, this issue is often a major aspect of regulatory permitting processes. If a regulatory body, or the Crown itself, determines that the duty to consult has not been appropriately discharged relative to the issuance of regulatory approvals required by Keyera, the issuance of such approvals may be delayed or denied, thereby impacting Keyera's Canadian operations.

The consultation processes and expectations of parties involved can vary considerably from project to project (and from community to community), which can contribute to process uncertainty, increased costs, delay in receiving required approvals, and potentially, an inability to secure the required approvals for some projects.

Keyera is monitoring the impact of the recent judgments of the Supreme Court of British Columbia with respect to Indigenous claims, including the claim brought by the Blueberry River First Nation ("**BRFN**") against British Columbia relating to the cumulative impact of industrial development within the BRFN treaty area and the claim brought by Saik'uz First Nation and Stellat'en First Nation in nuisance against the Crown and private company Rio Tinto Alcan Inc. The judgments have contributed to the acceleration of the government of British Columbia's imposition of additional requirements to obtain regulatory approvals for

developing pipelines or associated facilities and could cause delays, suspensions, or deferrals in the development of such facilities. They may also impact the current and future activities of producers operating in British Columbia and cause them to decrease production, which could, in turn, reduce such producers' demand for Keyera's facilities, and may have an adverse effect on Keyera's business. On January 18, 2023, the government of British Columbia and BRFN announced that they had reached the Blueberry River First Nations Implementation Agreement in response to the Supreme Court of British Columbia's BRFN decision. The agreement creates a framework for how resource development may continue within the BRFN claim area, which includes, among other things, limiting new surface disturbances from oil and gas development in BRFN's claim area to 750 hectares per year while a long-term cumulative effects management regime is developed and implemented. Keyera continues to actively monitor regulatory developments relating to Indigenous claims in British Columbia and details relating to the implementation agreement; however, Keyera cannot predict future regulatory changes that may arise to address the foregoing matters and any such regulatory changes could impact the operations of Keyera and Keyera's customers.

Regulatory Compliance, Approvals and Interventions

Keyera is subject to a variety of laws and regulations that require it to obtain registrations, licenses, permits, inspections and other approvals in order to operate. There is no guarantee that such approvals can be obtained on a timely basis, or at all. Delays in processing applications may impact the schedule for capital projects. In some instances, regulatory delays, whether as a result of actions by a regulator or intervention by third parties, may result in project delays, project economics becoming less favourable or, in some cases, projects not proceeding at all.

The cost to comply with regulatory requirements can be significant. For example, carbon pricing, emissions reduction requirements, noise mitigation, measurement and reporting, involve implementation and management costs. As well, proposed changes to federal and provincial environmental laws may adversely affect the ability of Keyera and others to continue certain operations in their current format or advance new projects, which could adversely affect Keyera's profitability and growth opportunities. Regulatory uncertainty makes it challenging for industry, including Keyera, to make investment decisions and forecast compliance obligations (including costs) which compounds the challenges with the investment climate and industry activity in the WCSB. See "Changes in Laws" above.

Pipelines and facilities can be subject to common carrier and common processor applications and to rate setting by regulatory authorities in the event that agreement on fees or tariffs cannot be reached with producers. To the extent that producers believe processing fees or tariffs respecting pipelines and facilities are too high, they may seek rate relief through regulatory means. Keyera tries to reduce the likelihood of regulatory intervention by taking industry standards and guidelines into account and by working proactively with various stakeholders and its customers. Rates and tariffs for Keyera's pipelines and facilities are generally established to recover capital costs and earn a reasonable rate of return on investment. To date, no pipeline or facility operated by Keyera has ever been declared to be a common carrier or a common processor. Nevertheless, there is no guarantee that Keyera will be able to avoid challenges to its rates and tariffs. Further, Keyera may also be adversely affected by regulatory action taken with respect to third-party systems and infrastructure. See "Reliance on Other Facilities and Third-Party Services" above.

Information Technology Systems and Cyber Security

Keyera utilizes a number of information technology systems for the management of its business and the operation of its facilities. The reliability and security of these systems is critical. If the functionality of these systems is interrupted or fails and cannot be restored quickly, or if the technologies are no longer supported, Keyera's ability to operate its facilities and conduct its business could be compromised.

Although the technology systems Keyera utilizes are intended to be secure, there is a risk that an unauthorized third-party could access the systems. Such a security breach could lead to a number of adverse consequences, including but not limited to: the unavailability, disruption or loss of key functionalities

within Keyera's control systems; operational delays; damage to assets, the environment or Keyera's reputation; the unauthorized disclosure, corruption or loss of sensitive company, customer or personal information; diminished customer confidence; and financial loss. Keyera attempts to prevent such breaches through the implementation of various technology security measures, segregation of control systems from its general business network, utilization of the cloud and offsite data centers, engaging skilled consultants and employees to manage Keyera's technology applications, conducting periodic audits and adopting policies and procedures as appropriate; however, these measures may not be successful.

Keyera also relies on many third-party service providers with respect to its information technology security and storage of information and data. While Keyera attempts to conduct appropriate due diligence on these third-party service providers, there is no guarantee that there will not be a breach of security impacting such third parties, or inadequate service levels from such third parties, which could result in risks to Keyera's systems and information.

To date, Keyera has not been subject to a cyber security breach that has resulted in a material impact on its business or operations; however, there is no guarantee that the measures it takes to protect its business systems and operational control systems will be effective in protecting against such a breach in the future.

Risks Arising from Co-ownership

Many of Keyera's facilities are jointly owned with third parties. Certain decisions relating to these facilities require the approval of a simple majority of the owners, with other decisions requiring a higher percentage or even unanimous approval of the owners. It may not be possible for Keyera to obtain the required levels of approval from co-owners of facilities for future proposals for capital expenditures, which may adversely affect Keyera's ability to expand or improve its existing facilities. In addition, agreements for joint ownership often contain restrictions on transferring an interest in a facility, including consent requirements and rights of first refusal. Such provisions may restrict Keyera's ability to transfer its interests in facilities or to acquire a joint venture owner's interests in facilities, and may also restrict Keyera's ability to maximize the value of a sale of its interest.

Keyera increased its ownership interests at many of its existing gas plants in recent years, in many cases becoming the sole owner, in order to mitigate some of the risks arising from co-ownership. However, many of Keyera's current capital projects and business initiatives are joint ventures, and in several of these projects Keyera was not appointed or will not be appointed the operator.

In addition, some of Keyera's facilities are operated by third parties (such as the Norlite pipeline, Base Line Terminal and the Edson, Alder Flats and Pipestone gas plants). To the extent a third-party operator fails to perform its functions efficiently or becomes insolvent, Keyera's business and operations may be adversely affected. Keyera's efforts to mitigate this risk by contracting with competent operators and negotiating appropriate allocation of risk in its contracts may not be effective.

Reliance on Principal Customers and Suppliers

Keyera relies on a number of principal customers and suppliers in each of its business segments. Keyera enters into many contracts with its customers and suppliers which are often for a defined term or are subject to early termination upon notice. Keyera also relies on agreements with key customers to underpin capital projects.

There is no guarantee that any of the contracts that Keyera currently has in place will be renewed at the end of their term or replaced with other contracts in the event of early termination. Further, there is a risk that customers or suppliers will be unable to perform their obligations under the contracts. Customers may also seek relief from their contractual obligations or seek to restructure their contractual arrangements. If any of these circumstances were to arise, the revenue generated by Keyera's operating entities could be reduced or capital projects could be suspended. In either case, Keyera's financial results and cash flow

could be adversely affected. In a low commodity price environment, counterparty risk becomes more significant.

There is no guarantee Keyera will be able to renew or replace existing contracts or enter into new contracts or that existing contracts will generate the expected benefits. Although Keyera may be able to partially mitigate potential losses in some circumstances through the use of business interruption insurance, such insurance coverage may not be sufficient or available to compensate for all such losses or damages. See “Financial Risks – Adequacy of Insurance”.

Risks Relating to Leases and Rights of Way Access

Keyera’s facilities and associated infrastructure are located on lands leased or licensed from third parties that must be renewed from time to time. Failure to renew the leases or licenses on terms acceptable to Keyera could significantly reduce the operations of such facilities and could result in related decommissioning costs for Keyera, pursuant to the terms of such leases or licenses. Successful development of new pipelines or extensions to existing pipelines depends in part on securing leases, easements, rights-of-way, permits and/or licenses from landowners or governmental authorities allowing access for such purposes. The process of securing rights-of-way or similar access is becoming more complex, particularly in more densely populated, environmentally sensitive and other areas. The inability to secure such rights-of-way or similar access could have an adverse effect on Keyera’s operations and financial results.

Competition

Keyera’s Gathering and Processing, Marketing, and Liquids Infrastructure businesses operate in competitive markets. Each of Keyera’s gas plants is subject to competition from other gas processing plants which are either in the general vicinity of Keyera’s plants or have gathering systems that currently or could in the future extend into Keyera’s capture areas. In addition, competition from non-hydrocarbon based energy sources may have an adverse effect on the production of natural gas and gas products in Alberta and, as a result, on the demand for Keyera’s services.

As well, in Keyera’s Liquids Infrastructure business, its pipelines and storage, terminal and processing facilities are subject to competition from other pipelines and facilities, which competition is anticipated to continue to grow. The competition to attract NGL volumes is competitive, which has implications not only for Keyera’s facilities, but also for Keyera’s Marketing business. In recent years, Keyera was successful in competing for NGL supply volumes, but there is no guarantee that the strategies that were employed will continue to be successful.

NGL and crude oil commodities that are marketed by Keyera compete with supplies from Canadian, U.S., and international sources. There is also competition from industries seeking to provide substitute products or alternative sources of fuel, gasoline blending products, diluents and feedstock. For example, in the iso-octane marketing business, alkylate is a common alternative competitive product. Alkylate is typically produced by reacting isobutane with refinery olefins in the presence of an acid catalyst to produce a relatively high octane gasoline component. Most North American refineries have some alkylate production capabilities. Keyera also competes with local and international entities to secure NGL supply for its marketing and NGL facilities business.

Overall, competition for business opportunities continues to be aggressive. This competitive dynamic may place downward pressure on expected returns when seeking to negotiate new projects and opportunities or force Keyera to reduce its fees and associated returns in order to retain customers.

Geographical Operational Risks

The majority of Keyera’s assets are concentrated in Alberta in the WCSB, which leaves the company exposed to the economic conditions impacting Alberta in particular. Keyera partially mitigates this risk

through a diversity of business activities within the province of Alberta and by owning and operating assets in the U.S. and dealing with customers outside of Alberta.

Keyera is actively involved in U.S. NGL and iso-octane markets. Keyera makes a significant percentage of its propane and iso-octane sales into U.S. markets and also purchases NGLs in U.S. markets, particularly condensate, propane and butane. Keyera's reliance on these markets means that it is subject to downturns in the U.S. economy, adverse weather patterns in the U.S. (such as hurricanes and tropical storms), U.S. regulatory changes, protectionist actions by U.S. legislators, trade disputes, and other political developments, all of which could have an adverse impact on Keyera's financial results.

Keyera continues to expand its physical presence in the U.S. While the growth of Keyera's operations in the U.S. enhances its ability to access large U.S. markets, it also presents a number of risks, including increased regulatory and compliance obligations and costs, risks associated with potential non-compliance and civil liability exposure. The U.S. tends to be a more litigious environment with larger damages awards compared to Canada. In some instances, Keyera may be subject to the exclusive jurisdiction of the U.S. courts. In addition, tax laws relating to Keyera's U.S. operations may be changed in a manner which adversely affects Keyera. In addition, to the extent the U.S. experiences increased protectionist sentiment, trade disputes or the renegotiation of trade agreements, and efforts to reduce or change regulation in many U.S. industries, the competitive position of Keyera and the Canadian energy industry overall may become increasingly uncertain and challenging in relation to the U.S.

While KEI has a relatively small staff in its Houston office, as well as employees and contractors at its Oklahoma Liquids Terminal and Wildhorse Terminal, portions of Keyera's U.S. operations are managed by Canadian personnel with limited expertise in U.S. regulatory matters. Keyera has implemented strategies to reduce the exposure of its Canadian assets to civil claims in the U.S.; however, there is no guarantee that any of these activities will have the effect of reducing the risks associated with its operations in the U.S. or with Keyera's access to U.S. markets, particularly for propane and iso-octane sales and condensate and butane purchases.

Keyera loads production onto rail cars that are shipped to Mexico. While the sale of the product associated with these shipments is typically completed in Canada or the U.S., Keyera may be the consignor of the product for transportation purposes and therefore must comply with certain Mexican legal requirements. As there is a somewhat different risk profile associated with doing business in Mexico, Keyera works with the rail leasing companies to permit its rail cars to travel into Mexico and with its insurers to secure insurance coverage; however, there is no guarantee that the steps Keyera has taken to mitigate the risks associated with its activities in Mexico will be effective.

Weather Conditions

Weather conditions (including those associated with climate change) can affect the demand for, and availability and price of, oil, natural gas, NGLs, and iso-octane. As a result, changes in weather patterns can affect throughput, as well as Keyera's NGL marketing activities. For example, colder winter temperatures generally increase demand for natural gas and NGLs used for heating, which tends to result in increased throughput volumes at facilities and higher prices in Keyera's Marketing business. In its facilities and NGL business, Keyera tries to position itself to be able to handle increased volumes of throughput and storage at its facilities to meet changes in seasonal demand; however, at any given time, facility and storage capacity is finite. Weather may also affect the operations and projects of Keyera's customers and suppliers, thereby influencing the services and products Keyera provides and/or receives.

While Keyera does not speculate on weather in its Marketing business, it tries to time its inventory builds with the seasonality of supply and demand. For example, Keyera will typically build inventories of propane in the warmer months (when demand is typically lower) for delivery in the winter months (when demand is typically higher). While Keyera uses financial and physical contracts to mitigate the commodity price risks associated with these inventories, there is no guarantee that Keyera's inventory management activities will be effective in mitigating such risks.

Weather conditions, including extreme heat and extreme cold, can pose safety concerns for workers and can affect the performance and operation of Keyera's facilities. Weather conditions may also influence Keyera's ability to complete capital projects or facility turnarounds on time, potentially resulting in delays and increasing costs of such capital projects and turnarounds and in some cases, may result in Keyera being unable to meet its contractual "in service" dates.

In addition, climate change could result in extreme variability in weather patterns, such as increased frequency and severity of extreme weather events, heavy snowfall, heavy rainfall, floods, landslides, fires, hurricanes, tropical storms, ice storms, rising mean temperature and sea levels, and long-term changes in precipitation patterns. Keyera's assets and operations are exposed to potential interruption or damage from these kinds of events. Keyera may also experience reduced access to its assets or increased risk of loss of life or injury or damage to property and the environment. Keyera expects to experience climate related physical risks in the future, potentially with increasing frequency or severity.

Transportation of Dangerous Goods

Keyera's operations include rail/truck loading, offloading and terminalling facilities used to transport various petroleum products. These petroleum products are considered dangerous goods under TDG laws. Keyera ships a high volume of product by truck and rail and loads a significant number of rail cars and trucks at its facilities. When Keyera loads petroleum products, it may be considered the consignor, in which case it has specific responsibilities under the TDG laws, including the responsibility to ensure that the product is properly classified, the shipment is properly labeled and the product is loaded in an appropriate tank. Keyera also owns and operates rail infrastructure and must comply with applicable laws (including TDG laws) relating to the maintenance and inspection of these facilities.

Keyera may face liability for personal injuries, damage to property or lost product in the event of an incident involving rail cars or trucks loaded by Keyera, where Keyera is the consignor or importer of the product, where Keyera owns the product that is involved in an incident, or where an incident occurs on Keyera's proprietary rail infrastructure. As well, under various environmental statutes in both Canada and the U.S., Keyera could be held responsible for environmental damage caused by hydrocarbons loaded at its facilities or being carried on its leased rail cars. Keyera may also be exposed to regulatory action in the event that it fails to comply with TDG laws. In the event Keyera is ultimately held liable for any damages resulting from its activities relating to TDG, for which insurance is not available, or increased costs or obligations are imposed on Keyera as a result of new regulations, Keyera's business, operations and financial performance could be adversely affected.

Although Keyera regularly assesses the risks associated with the transportation of dangerous goods and has established a transportation of dangerous goods/logistics committee which provides a level of oversight, there is no guarantee that these mitigation measures will be effective.

Natural Gas and NGL Composition

Each of Keyera's gas plants is designed to process raw natural gas feedstock within a certain range of composition specifications. The gas plants may require modification to operate efficiently if the composition of the raw gas being processed changes significantly. The configuration of each of Keyera's gas plants may not be optimal for efficient operation in the future if a change in inlet gas composition is outside a plant's acceptable range of composition specifications. Changes in gas composition, including the trend toward producing less sour gas and more sweet gas, can present challenges for achieving sulphur recovery levels at certain facilities, and can also create challenges in maintaining competitive operating costs at sour gas facilities. Keyera may need to change its license parameters, including sulphur recovery levels, may decide to shut down sour processing equipment at its facilities as gas composition changes, or may need to adjust its fee structure to remain competitive (e.g., if it does not recover all of its operating costs).

Keyera's NGL facilities are also exposed to risks associated with feedstock composition. If the NGLs handled at these facilities differ in composition or specification from the design of the facilities, there

may be operational challenges and additional maintenance activities may be necessary. Further, because NGLs in Keyera's system may come from many sources, it is possible product originating from a non-CUSMA country could enter the system and result in customs duties being applied on imports and exports.

Keyera monitors plant throughput, gas composition, third-party system performance and industry development activity in the capture areas surrounding its facilities on an ongoing basis. This information is used to assist with ongoing operational decisions, bringing on new production and new customers, evaluating expansion opportunities and assessing opportunities to modify or add new services to accept the inlet gas in the capture areas surrounding its facilities. Keyera also amended its AER licenses at certain plants to deal with changes in gas composition, particularly to address declining concentrations of H₂S in the inlet gas, and may consider additional amendments in the future.

Acquisition and Integration Risk

Keyera previously expanded its business through acquisitions and may seek to further expand its business through acquisitions. Keyera intends to consider and evaluate opportunities for acquisitions but there can be no assurances that an attractive acquisition candidate will be available in the future or that Keyera will have the ability to acquire such acquisition candidate on economically acceptable terms. Acquisitions may require significant capital, which would preclude Keyera from using those funds for other purposes, and the negotiations of an acquisition and post-closing integration of new business operations could disrupt Keyera's business by diverting management's attention from day-to-day operations. The integration process may also result in the loss of key employees and the disruption of ongoing business, customer and employee relationships, which may adversely affect Keyera's ability to achieve the anticipated benefits of any acquisitions. Acquisitions may also expose Keyera to additional risks, including: risks relating to entry into markets or businesses in which Keyera has little or no direct prior experience; increased credit risks through the assumption of additional debt; costs and contingent liabilities; and exposure to liabilities of the acquired business or assets. Any potential impairment of tangible assets, goodwill and other intangible assets related to any such acquisition would reduce Keyera's overall earnings, which could negatively affect Keyera's capitalization and results of operations.

Employees and Contractors

A skilled workforce is important to the ongoing success of Keyera. Keyera must attract, train, and retain skilled employees and contractors in variable employment markets while controlling related labour costs. Keyera's ability to control labour and benefit costs is subject to numerous internal and external factors, including changes in the unemployment rate, changes in immigration policy, regulatory changes, prevailing wage rates, and competition from other companies for similarly qualified employees. Further, the cost of retaining employees and hiring contractors in some locations can place inflationary pressure on Keyera's costs.

Given the demand for many of these skilled individuals, Keyera devotes a significant amount of resources and planning to the recruitment, retention, and training of its employees and contractors to secure the required level of staffing and skills necessary to support its businesses and projects. If Keyera is not able to attract skilled employees and contractors, its ability to execute its business plans may be impaired.

Dependence on Key Personnel

The success of Keyera has been largely dependent on the skills and expertise of its key personnel to manage the overall business and achieve positive margins. The continued success of Keyera will be dependent on its ability to retain such personnel. Costs associated with retaining key personnel could adversely affect Keyera's business operations and financial results.

Labour Relations

Keyera currently has unions at three of its gas plants. Unionized labour disruptions at these or other facilities could restrict the ability of these facilities to operate and therefore adversely affect Keyera's financial results. See "Business of Keyera – Employees and Labour Relations". Although Keyera strives to maintain a good relationship with its unions and unionized employees and to date has never experienced a strike or work stoppage at its unionized plants, such an event could occur in the future and any such occurrence could adversely affect Keyera's business operations or financial results.

Civil Unrest or Activism

Civil unrest or activism may have significant effects on general economic conditions and may cause fluctuations in consumer confidence, spending and market liquidity, each of which could adversely affect Keyera's business. Increased environmental activism against oil and gas construction projects and operations, including but not limited to pipelines, could potentially result in damage to Keyera's assets, reduced demand for Keyera's services, changes to legislation or the denial or delay of permits and right-of-ways, any of which could adversely affect Keyera's business, operations or financial results.

Political Uncertainty

Political events, decisions and trends in Canada, the U.S. and elsewhere, have, and can continue to create future uncertainty on global financial and economic markets. This uncertainty may impact the energy industry in Canada, the U.S. and worldwide, and may have an adverse affect on Keyera's business and financial results.

Reputational Risk

Reputational risk is the potential risk that market-specific or company-specific events, or other factors, could result in the deterioration of Keyera's reputation with key stakeholders. Keyera's reputation may be adversely impacted by the actions and activities it undertakes, as well as the activities of its employees. In addition, Keyera's reputation could be affected by the actions and activities of other companies operating in the energy industry and by general public perceptions of the energy industry, over which Keyera has little control. For example, negative publicity related to pipeline incidents, unpopular expansion plans or new projects, transportation of hydrocarbons by rail, as well as opposition from organizations opposed to oil and gas, oil sands or pipeline development, all have the potential to affect the perception of Keyera by its stakeholders. The increasing debate and focus on climate change has contributed to increasing negative public sentiment toward the hydrocarbon-based energy sector and higher levels of scrutiny with respect to emissions and overall environmental performance. If Keyera's reputation is diminished, it could result in: loss of customers; revenue loss; delays in obtaining regulatory approvals with respect to growth projects, increased operating, capital, financing or regulatory costs; loss of Shareholder confidence; or loss of public support for Keyera's business and operations. See "Environmental, Social and Governance Matters – Environmental Programs" and "Regulatory Framework – Greenhouse Gas and Emissions Regulation".

COVID-19 Related Impacts

Keyera's business, financial condition and results of operations have been and may continue to be materially and adversely affected by the outbreak of epidemics, pandemics and other public health crises in geographic areas in which Keyera has operations, suppliers, customers or employees, including the ongoing COVID-19 pandemic and continued uncertainty with respect to the extent and duration of the pandemic. Actions that have, and may be, taken by governmental authorities in response to the pandemic have resulted, and may continue to result in, among other things: fluctuations in the status of the global economy, including changes in global energy demand; increased volatility in financial and commodity markets; disruptions to global supply chains; labour shortages; inflation and cost pressures; significant impacts to the workforce; reductions in trade volumes; temporary operational restrictions and restrictions

on gatherings of individuals, as well as shelter-in-place declarations and quarantine orders; business closures and travel bans; political and economic instability; and civil unrest. The occurrence of new variants of the COVID-19 virus in certain geographic areas, including certain areas in which Keyera operates, and the possibility that a resurgence of the COVID-19 virus or the spread of such new or other variants or mutations thereof may occur in other areas, may result in the reimposition of certain of the foregoing restrictions or further restrictions by governmental authorities in certain jurisdictions, including certain jurisdictions in which Keyera operates.

Depending on the extent and duration of the COVID-19 pandemic, it may also have the effect of heightening many of the other risks described herein, including the risks relating to Keyera's exposure to commodity prices; the successful completion of Keyera's growth and expansion projects, including the expected return on investment thereof; Keyera's ability to maintain its credit ratings; restricted access to capital and increased borrowing costs; Keyera's ability to pay dividends to Shareholders and fund its debt obligations; and otherwise complying with the covenants contained in the agreements that govern Keyera's indebtedness.

Expansion of Operations

Keyera's operations and expertise are currently focused primarily on oil and gas infrastructure activities. If Keyera engages in activities other than its current core business activities or in new geographical areas in the future, this may present new risks or significantly increase the exposure to one or more of the existing risks, any of which may adversely affect Keyera's future operational and financial conditions.

Potential Conflicts of Interest

Shareholders and other security holders of Keyera are dependent on senior management and the directors of Keyera for the governance, administration and management of Keyera. Certain directors and officers of Keyera may be directors or officers of entities in competition to Keyera or may be directors or officers of certain entities with which Keyera deals. As such, certain directors or officers of Keyera may encounter conflicts of interest in the administration of their duties with respect to Keyera.

Technological Developments and Digital Transformation

The oil and natural gas industry is characterized by rapid and significant technological advancements and introductions of new products and services utilizing new technologies. In such an environment, Keyera may not be able to, among other things: clearly define and prioritize technology requirements and infrastructure design; effectively implement new technologies; effectively operate and maintain existing infrastructure; innovate new digital solutions and scalable data infrastructure for digital offering at the same pace as the larger market solutions based on digital design and advanced analytics; or establish organic growth platforms to better understand, target and engage Keyera's customers. Failure to do so could materially adversely affect Keyera's operations and its ability to compete in the market.

Financial Risks

Market Risk and Marketing Activities

Keyera enters into contracts to purchase and sell natural gas, NGLs, crude oil and iso-octane. Most of these contracts are priced at floating market prices. These activities expose Keyera to market risks resulting from movements in commodity prices between the time volumes are purchased and the time they are sold, from fluctuations in the margins between purchase prices and sales prices, balancing product purchases and sales contracts, and, in some cases, may also expose Keyera to currency exchange risk. See "Foreign Exchange Risk" below.

- (a) *Product Price* – The prices of the products that are marketed by Keyera are subject to fluctuations resulting from seasonal demand changes, transportation constraints, changes in crude oil, natural gas, NGL and iso-octane markets (including, but not limited to, oil production in U.S. and internationally), changes to basis differentials and other factors. Further, Keyera normally has a long position in most of the NGL products that it markets, and may store NGLs in order to meet seasonal demand and take advantage of seasonal pricing differentials, resulting in inventory price risk. Iso-octane margins are driven by the price of butane (the primary feedstock) and RBOB, as well as the iso-octane premiums above RBOB. Because NGL blending margins are earned by capturing spreads between different product qualities, Keyera’s Liquids Infrastructure business is subject to volatility in price differentials between the various product streams. These exposures could result in variability in the operating income generated by the Marketing business and Keyera’s distributable cash flow.
- (b) *Volume* – Keyera purchases a substantial volume of NGLs from producers and other customers for resale to third parties, including other marketers and end-users. In many circumstances, particularly in the Marketing business, Keyera’s purchase and sale contracts may not match, as the contracts may be entered into at different times, locations and for different values. A producer or supplier could fail to deliver contracted volumes or could deliver in excess of contracted volumes, or a purchaser could purchase less than contracted volumes. Any of these actions could cause Keyera’s purchases and sales to be unbalanced. While Keyera attempts to balance its purchases and sales, if its purchases and sales are unbalanced, Keyera will face increased exposure to commodity price risks and could have increased volatility in its operating income and distributable cash flow.

Although Keyera attempts to mitigate certain elements of this risk exposure through the integration of the Marketing business with its facilities businesses (which is a fee-for-service business). Keyera remains exposed to market, commodity price, and exchange rate risk. See “Business of Keyera – Marketing Business Segment – Commodity Risk Management” for a description of how Keyera manages certain commodity risk.

When possible, Keyera uses hedging strategies as part of its overall risk management strategy to assist in managing the exposure to commodity price, interest rate and foreign exchange risks. The use of such hedging activities exposes Keyera to risks which may cause significant loss. These risks include but are not limited to: changes in the valuation of the hedge instrument being not well correlated to the change in the valuation of the underlying exposures being hedged; deficiency in Keyera’s systems or controls; human error; and the unenforceability of Keyera’s contracts. The terms of these contracts or instruments may limit the benefit of favorable changes in commodity prices, interest rates, currency values and share price and may result in financial opportunity loss.

There is no guarantee that hedging and other efforts to manage the marketing and inventory risks will generate profits or mitigate all of the market and inventory risk associated with these activities. While hedging and other efforts to manage market and inventory risk are intended to mitigate Keyera’s risk exposure, because of the inherent nature and risk of such transactions, those activities can result in losses. If Keyera hedges its commodity price exposure, it may forego the benefits that may otherwise be experienced if commodity prices were to increase and it is subject to credit risks associated with the counterparties with whom it contracts. See “Credit Risk” below. For additional information on Keyera’s hedging strategies, refer to the management’s discussion and analysis accompanying the 2022 Financial Statements which is available on SEDAR at www.sedar.com.

Operating, Capital and General and Administrative Costs

Operating and capital costs associated with Keyera’s facilities represent significant components of the cost of providing services. These costs may vary considerably from current and forecast values and rates. In general, as facilities age, costs associated with operating and maintaining such facilities may increase over time. In addition, operating and capital costs may increase as a result of a number of factors beyond Keyera’s control, including general economic, business and market conditions and supply, demand

and/or inflation in respect of required goods and/or services. Fluctuations in the prices of electricity and fuel can cause significant fluctuations in operating costs. Although operating costs are often recovered through the tariffs charged on processing and transportation, some processing arrangements do not permit the flow-through of operating costs. Further, to the extent operating costs increase, producers may seek lower cost alternatives or shut-in production of their natural gas.

General and administrative costs may vary considerably from current and forecast values as a result of fluctuations in employment markets and the demand for trades which affect compensation that must be paid to attract and retain employees and contractors. As well, the cost of Keyera's long term incentive plan ("LTIP") can vary considerably due to the fact that the value of the payments required to satisfy the grants primarily depend on: (a) the market price of the Common Shares, and (b) the number of Common Shares awarded based on a multiplier linked to certain corporate performance metrics.

Maintenance capital requirements and maintenance expenses may vary from year to year depending on such factors as the scheduling of maintenance turnarounds, operating conditions and gas composition.

Working capital requirements are strongly influenced by the volume of NGLs, iso-octane and oil held in storage and related commodity prices. In addition to the working capital required for inventory, Keyera requires working capital to finance its other business activities, including its risk management program. Growth in capital expenditures vary depending upon available opportunities and financing.

If significant increases in operating, capital or general and administrative costs are incurred, this may negatively impact Keyera's financial results.

Keyera may also experience unanticipated increases or fluctuations in input costs, such as the costs of electricity and fuel. If Keyera uses physical and financial contracts to hedge its input costs, it may forego the benefits that may otherwise be experienced if input costs were to decrease and it is subject to credit risks associated with the counterparties with whom it contracts. See "Credit Risk" below.

Adequacy of Insurance

There can be no assurance that Keyera will be able to obtain or maintain adequate insurance coverage at all or at rates it considers reasonable. Further, there can be no assurance that available insurance will cover all losses or liabilities that might arise in the conduct of Keyera's business. The occurrence of a significant uninsured claim, a claim in excess of the insurance coverage limits maintained by Keyera, or a claim that falls within a significant self-insured retention could have a material adverse effect on Keyera's business, operations and financial performance. Further, significant insured claims could lead to an increased cost of operating and insuring Keyera's assets in the future.

In recent years some insurers have stated publicly that they will no longer provide new insurance capacity or are reducing current capacity offered to companies operating in the oil sands. As a result, accessing insurance at reasonable rates could become a challenge for Keyera, which may impact the cost of operations and inhibit Keyera's ability to pursue new projects or acquisitions.

With the growth in Keyera's operating activities in the U.S., Keyera expanded its insurance coverage to include coverages for its U.S. operations. Because of the more litigious environment in the U.S., the potential for higher damages awards and Keyera's assets in the U.S., premiums for this coverage are notably higher than coverage for Canadian operations and there is no guarantee that the coverages Keyera obtained will be sufficient to satisfy any claims that may be brought as a result of these operations.

Keyera does not insure against soil and groundwater contamination, except for contamination resulting from catastrophic failures. In certain areas in which Keyera has operations, it carries limited or no coverage for terrorism or for any injury to workers that occurs as a result of terrorism.

Decommissioning, Abandonment and Reclamation Costs

Keyera is responsible for compliance with all applicable laws and regulations regarding the decommissioning, abandonment and reclamation of its facilities at the end of their economic life, the costs of which may be substantial. It is not possible to predict these costs with certainty since they are a function of regulatory requirements at the time of decommissioning, abandonment and reclamation and the actual costs may exceed current estimates which are the basis of the asset retirement obligation shown in Keyera's financial statements. A detailed discussion of the assumptions and basis for calculating the fair value of the decommissioning costs are included in the management's discussion and analysis accompanying the 2022 Financial Statements which is available on SEDAR at www.sedar.com. See "Environmental, Social and Governance Matters – Environmental Programs".

Keyera may, in the future, determine it is prudent or may be required by applicable laws or regulations to establish and fund one or more decommissioning, abandonment and reclamation reserve funds to provide for payment of future decommissioning, abandonment and reclamation costs. The creation and maintenance of these reserves could decrease cash flow available to pay dividends to Shareholders and to service debt obligations in the future. Further, even if such reserve funds were established, they may not be sufficient to satisfy the future decommissioning, abandonment and reclamation costs and Keyera will be responsible for the payment of the balance of such costs.

Environmental Compliance and Remediation Costs

Keyera allocates funding for its environmental programs each year. However, there is the risk that unforeseen matters may arise requiring Keyera to set aside additional funds. Compliance obligations under applicable environmental laws can result in significant costs, including those associated with installing and maintaining pollution controls, fines and penalties resulting from any failure to comply, and potential limitations on operations. Remediation obligations can also result in significant costs associated with the investigation and remediation of contaminated properties. Activities that do not meet regulatory standards or that breach such legislation may result in the imposition of fines, penalties and suspension of operations. It is also possible that increasingly strict environmental and safety requirements could be implemented, which could result in substantial increases in the cost of compliance, including increased capital expenditures and operating expenses. There is also the risk of civil liability for environmental matters.

Keyera also undertakes remediation projects that are identified through its liability management system as part of its ongoing efforts to manage its environmental risk. However, it is not possible for Keyera to estimate the amount and timing of all future expenditures related to environmental matters due to various factors, including: (a) uncertainties in estimating pollution control and clean-up costs, including at sites where only preliminary site investigation or agreements have been completed; (b) the potential discovery of new sites or additional information at existing sites; (c) the uncertainty in quantifying liability under environmental laws that impose joint and several liability on all potentially responsible parties; (d) the evolving nature of environmental laws and regulations, including the interpretation and enforcement thereof; and (e) the potential for litigation on existing or discontinued assets. Based on current operations and practices, the cost of complying with environmental regulations and Keyera's exposure to civil liability for environmental matters have not had and are not expected to have a material adverse effect on its financial results; however, no assurance can be given that such costs will not materially adversely affect financial results in the future. See "Environmental, Social and Governance Matters – Environmental Programs" and "Regulatory Framework – Greenhouse Gas and Emissions Regulation".

Cash Dividends Are Not Guaranteed

Dividends are not guaranteed and will fluctuate with the performance of Keyera's business and operations. Any future dividend payments by Keyera and the level thereof will be determined at the discretion of the Board of Directors. The cash available to pay dividends depends on a number of factors, including: current and expected future levels of earnings; operating cash flow; income taxes; maintenance and growth capital expenditures; debt repayments; working capital requirements; current and potential future environmental liabilities; the impact of interest rates and/or foreign exchange rates; crude oil, natural

gas, NGL and iso-octane prices; and other factors. Keyera's short and long term borrowings prohibit Keyera from paying dividends at any time at which a default or event of default would exist under such debt, or if a default or event of default would exist as a result of paying the dividend. See "Debt Matters" below.

External sources of capital, including borrowings and the issuance of additional Common Shares or Preferred Shares, become limited or unavailable on commercially reasonable terms, Keyera's ability to sustain its dividends and make the necessary capital investments to maintain or expand its business may be impaired. The extent to which Keyera is required to use cash flow to finance capital expenditures or acquisitions may reduce the cash flow available to declare and pay dividends to Shareholders. Dividends may be increased, reduced or suspended or eliminated entirely depending on Keyera's operations and the performance of its assets and businesses.

Capital Market and Liquidity Risks

Keyera may have restricted access to capital and increased borrowing costs. As Keyera's future capital expenditures will be financed out of cash generated from operations, borrowings, and possible future equity sales, Keyera's ability to finance such expenditures is dependent on, among other factors, the overall state of capital markets and investor demand for investments in the energy industry generally and Keyera's securities in particular.

To the extent external sources of capital become unavailable or available on onerous terms or otherwise limited, Keyera's ability to make capital investments and maintain existing assets may be impaired, and its assets, liabilities, business, financial condition, results of operations, and dividends may be materially and adversely affected as a result.

If cash flow from operations is lower than expected or capital costs for projects exceed current estimates, or if Keyera incurs major unanticipated expenses related to construction, development, or maintenance of its existing assets, Keyera may be required to seek additional capital to maintain its capital expenditures at planned levels. Failure to obtain financing necessary for Keyera's capital expenditure plans may result in a delay in Keyera's capital program or a decrease in dividends.

Debt Matters

Keyera relies on debt financing for some of its business activities, including capital and operating expenditures. Keyera's credit facilities, long term senior unsecured notes and subordinated hybrid notes have defined terms and there are no assurances that Keyera will be able to refinance any or all of the borrowings at their maturity, or to refinance such borrowings on commercially reasonable terms. In addition, there are no assurances that Keyera will be able to comply at all times with the covenants applicable under its current borrowings; nor are there assurances that Keyera will be able to secure new financing that may be necessary to finance its operations and capital growth program. Any failure of Keyera to secure refinancing, to obtain new financing or to comply with applicable covenants under its borrowings could have a material adverse effect on Keyera's financial results, including its ability to pay dividends to Shareholders. Further, any inability of Keyera to obtain new financing may limit its ability to support future growth. See "Capital Structure of the Corporation".

Borrowings or additional borrowings made by or on behalf of Keyera will affect the leverage of the business. Interest and principal payments on such borrowings will reduce the amount of cash flow available for dividends to Shareholders and may increase the level of financial risk in the operations of Keyera. Keyera's short-term and long-term debt prohibit the payment of dividends at any time at which a default or event of default would exist under such debt, or if a default or event of default would exist as a result of paying a dividend.

If Keyera is unable to refinance debt obligations at the time of maturity or is unable to refinance on equally favourable terms, the amount of cash flow available for dividends to Shareholders may be affected. See "Capital Structure of the Corporation".

Keyera believes its existing credit facilities will be sufficient for its immediate requirements and expects that it will be able to renew its existing credit facilities or refinance its long term debt (which includes hybrid notes, public senior debt and private notes) on commercially reasonable terms. However, industry and global market conditions mean Keyera, along with other oil and gas companies, may have restricted access to capital and increased borrowing costs. Keyera's ability to raise debt is dependent upon, among other factors, the overall state of the debt and capital markets, the quality of Keyera's public credit ratings and investor appetite for investments in the energy industry and Keyera's securities in particular. The ability to make scheduled payments on or to refinance debt obligations depends on the financial condition and operating performance of Keyera, which is subject to prevailing economic and competitive conditions and to certain financial, business and other factors beyond its control. As a result, Keyera may be unable to maintain a level of cash flow from operations sufficient to permit it to pay the principal, premium, if any, and interest on its indebtedness. These conditions could have an adverse effect on the industry in which Keyera operates and its business, including future operating and financial results. There can be no assurance that Keyera's cash flow will be adequate for future financial obligations or that additional funds will be able to be obtained.

Credit Ratings

Keyera has been assigned issuer ratings by DBRS and S&P that are investment grade. See "Capital Structure of the Corporation – Credit Ratings". The issuer ratings are based on an assessment by each of DBRS and S&P of Keyera's financial strength, as well as a number of factors not entirely within Keyera's control, including conditions affecting the industry in which Keyera operates generally and the wider state of the economy. Any rating may be revised (including a downgrade) or withdrawn entirely by a rating agency in the future if in its judgement circumstances so warrant. As a result, there is a risk that Keyera's issuer ratings could be withdrawn or downgraded below investment grade in the future. In the event of a withdrawal or downgrade of an issuer rating, the credit rating of Keyera's Subordinate Hybrid Notes or the credit ratings on Keyera's Medium Term Notes, Series 1, Medium Term Notes, Series 2 or Medium Term Notes, Series 3¹⁰, Keyera's ability to access capital, its cost of borrowing on future debt, its financing strategy, the trading price of Keyera's Common Shares and its ability to enter into normal course derivative, hedging or other credit-based transactions (including the associated costs of such transactions) may be adversely affected. Further, if Keyera were to seek a rating for any securities in the future, there is no guarantee that such securities would receive the same or similar ratings as Keyera's issuer or existing securities ratings.

Credit Risk

Keyera takes on credit risk with respect to its fee-for-service business, the purchase and sale of commodities in its Marketing business, hedging of commodity price changes, as well as other financial contracts into which it enters. In particular, Keyera may be exposed to credit-related losses in the event counterparties to contracts become insolvent, are subject to creditor protection laws (e.g., the CCAA), or otherwise fail to fulfill their present or future financial obligations to Keyera. The majority of Keyera's accounts receivable are due from entities in the oil and gas industry and are subject to normal industry credit risks. Concentration of credit risk is mitigated to some degree by having a broad base of domestic and international customers. With respect to counterparties for financial instruments used for economic hedging purposes, Keyera attempts to limit its credit risk by dealing with recognized futures exchanges, or investment grade financial institutions, or by adherence to credit policies that significantly reduce overall counterparty credit risk; however, there can be no assurance that these processes will protect against all losses from non-performance.

Keyera's creditworthiness assessment of a counterparty considers the available qualitative and quantitative information about the counterparty including the financial status and external credit ratings. Depending on the outcome of each assessment, Keyera, in accordance with its credit policy, may: (a) set and adjust limits on exposure to its counterparties; (b) request collateral/security (e.g., letters of credit,

¹⁰ A credit rating withdrawal or downgrade on Keyera's Medium Term Notes could trigger a "Rating Event" (as defined in the Note Indenture).

guarantees or other credit enhancements), where appropriate; (c) require customers to prepay for products or services; and (d) use contractual arrangements that permit the netting of exposures associated with a single counterparty as well as other remedies. In Keyera's facilities business, the standard operating, transportation and processing agreements provide for an operator's lien on customer products transported or processed through Keyera's facilities. While these liens provide a degree of risk mitigation protection, there are legal risks associated with the enforcement of such liens. While Keyera takes active steps to monitor and manage its credit risk, it is possible that credit exposure to counterparties (or any one of them), may result in Keyera suffering losses, in which case its operations and financial results may be adversely affected.

Interest Rates

Keyera takes on interest rate risk in association with its debt financing. Amounts paid in respect of interest on debt reduce Keyera's cash flow. Interest rates are influenced by Canadian and global economic conditions beyond Keyera's control. Increased inflation and any economic conditions resulting from governmental attempts to reduce inflation, such as the imposition of higher interest rates, could negatively impact Keyera's borrowing costs, which could, in turn, have a material adverse effect on Keyera's cash flow and ability to service obligations under its debt securities and other debt obligations. Moreover, floating rate debt obligations expose Keyera to changes in interest payments, which could have an adverse effect on Keyera's financial results, as variations in interest rates could result in changes in the amount required to service debt.

As part of its efforts to mitigate the risk exposure associated with interest rate fluctuations, Keyera: (a) generally funds long term assets with long term, fixed-rate debt or equity; (b) limits floating-rate debt exposure, which is historically comprised of drawdowns under its credit facility; (c) ladders the maturity dates of its long term unsecured notes to manage re-financing risks; and (d) uses derivative instruments, including forward currency contracts and cross currency swaps, to hedge against the effect of future exchange rate movements. There is no guarantee these mitigation measures will be effective.

Foreign Exchange Risk

Foreign exchange risk arises on financial instruments that are denominated in a foreign currency. Keyera's functional currency is the Canadian dollar. Operating margins in the Gathering and Processing and Liquids Infrastructure businesses are generally not subject to foreign exchange risk, as all sales and virtually all purchases are denominated in Canadian dollars. However, Keyera may be exposed to foreign currency fluctuations with respect to capital projects in these segments, as some equipment and services may be sourced or priced in U.S. dollars.

Keyera's foreign exchange risk largely arises from the Marketing business where a significant portion of sales and purchases are denominated in or based on U.S. dollars. Foreign exchange risk is actively managed by using forward currency contracts and cross currency swaps. Keyera has adopted a risk management policy in relation to its marketing activities, including the exposure to foreign exchange risk associated with these activities.

Keyera is also exposed to foreign exchange risk related to its U.S. dollar-denominated long term debt. To manage this currency exposure, Keyera entered into cross currency swap contracts relating to principal and future interest payments for substantially all of the U.S. dollar denominated debt. These cross currency swap contracts are discussed further in the "Liquidity and Capital Resources" section of the 2022 management discussion and analysis available on SEDAR at www.sedar.com.

Market Price of the Common Shares

The market price of the Common Shares may fluctuate due to a variety of factors relating to Keyera's business, including: announcements of new developments; fluctuations in Keyera's operating results; sales or issuance of equity securities in the marketplace; failure to meet analysts' expectations;

general market conditions; investors' confidence in the WCSB; the energy industry generally or the worldwide economy; and other factors beyond Keyera's control. There can be no assurance that the market price of the Common Shares will not experience significant fluctuations in the future, including fluctuations that are unrelated to Keyera's performance. For these reasons, investors should not rely on past trends in the price of Common Shares to predict the future price of Common Shares or Keyera's financial results.

Ability to Divest Certain Assets

Keyera may from time to time desire to divest assets to optimize its operations and financial performance. Keyera may not, however, be able to sell assets or, if Keyera is able to sell assets, to raise optimal amounts of capital from such asset sales. Additionally, the timing to close asset sales could be significantly different than Keyera's expected timeline.

Sales of Additional Common Shares or Preferred Shares

The Corporation may issue additional Common Shares or Preferred Shares in the future. As of December 31, 2022, there are no Preferred Shares issued and outstanding. Such additional Common Shares and Preferred Shares may be issued without the approval of Shareholders. Shareholders do not have pre-emptive rights in connection with such additional issuances of Common Shares or Preferred Shares. It is not possible to predict the size of future issuances of Common Shares, Preferred Shares or the effect, if any, that future issuances of Common Shares or Preferred Shares will have on the market price of the Common Shares or Preferred Shares. Issuances of a substantial number of Common Shares or Preferred Shares, or the perception that such issuances could occur, may adversely affect prevailing market prices for the Common Shares or Preferred Shares. As well, with any additional issuance of Common Shares or Preferred Shares, Shareholders will experience dilution, compared to funding via debt.

Litigation Risk

Keyera is, in the course of its business, subject to lawsuits and other claims. Defence and settlement costs associated with such lawsuits and claims can be substantial, even with respect to lawsuits and claims that have no merit. Due to the inherent uncertainty of the litigation process, the resolution of any particular legal proceeding could have an adverse effect on Keyera's operating results or financial performance.

Internal Controls

Effective internal controls are necessary for Keyera to provide reliable financial reports, manage its risk exposure and help prevent fraud. Although Keyera undertakes several procedures to help ensure the reliability of its financial reports, including those imposed by Canadian securities laws, Keyera cannot be certain that such measures will ensure that it will maintain adequate control over financial processes and reporting. If Keyera or its independent auditors discover a material weakness, the disclosure of that fact, even if quickly remedied, could reduce the market's confidence in Keyera and its financial statements and negatively impact the trading price of the common shares.

LEGAL PROCEEDINGS AND REGULATORY ACTIONS

Keyera is subject to various legal proceedings and regulatory actions arising in the normal course of business. While the final outcome of such legal proceedings and regulatory actions cannot be predicted with certainty and there can be no assurance that such matters will be resolved in Keyera's favour, it is the opinion of Keyera's management that the resolution of such proceedings and regulatory actions will not have a material impact on Keyera's consolidated financial position, results of operations or liquidity. No penalties or sanctions material to Keyera have been imposed by a court or regulatory body, nor has Keyera entered into a settlement agreement in relation to any securities legislation.

INTERESTS OF MANAGEMENT AND OTHERS IN MATERIAL TRANSACTIONS

No director or executive officer, and no person of company that beneficially owns, controls or directs directly or indirectly, more than 10% of the Common Shares, nor any associate or affiliate of any such person, has had any material interest, direct or indirect, in any transaction with the Corporation within the three most recently completed financial years that has materially affected or is reasonably expected to materially affect the Corporation.

INTERESTS OF EXPERTS

Deloitte LLP is the external auditor of the Corporation. Deloitte LLP has advised they are independent with respect to the Corporation within the Rules of Professional Conduct of the Institute of Chartered Professional Accountants of Alberta.

TRANSFER AGENT AND REGISTRAR

Computershare is the transfer agent and registrar for the Corporation. Computershare has principal offices in Calgary, Alberta and Toronto, Ontario where transfers of securities may be recorded.

MATERIAL CONTRACTS

The following material contracts have been entered into on behalf of Keyera and are available under the Keyera profile on SEDAR at www.sedar.com:

Agreement	Amendment	SEDAR Filing Date
Shareholder Rights Plan Agreement dated March 14, 2017		May 11, 2017
Note Purchase Agreement dated June 19, 2012		February 14, 2013
	First Amending Agreement dated March 31, 2017	November 16, 2017
Note Purchase Agreement dated November 20, 2013		February 13, 2014
	First Amending Agreement dated March 31, 2017	November 16, 2017
Note Purchase Agreement dated October 13, 2016		February 14, 2017
	First Amending Agreement dated March 31, 2017	November 16, 2017
Note Purchase Agreement dated September 20, 2017		February 15, 2018
Uncommitted Private Shelf Facility dated November 5, 2010		February 17, 2011
	First Amendment dated January 4, 2011	February 15, 2018
	Second Amendment dated June 8, 2011	February 16, 2012
	Third Amendment dated October 10, 2013	February 13, 2014
	Fourth Amendment dated December 15, 2016	February 14, 2017
	Fifth Amending Agreement dated March 31, 2017	November 16, 2017
Assumption Agreement dated January 1, 2011*		February 17, 2011
Amended and Restated Credit Agreement dated December 6, 2021		December 15, 2021
Note Indenture		June 28, 2018
First Supplemental Note Indenture		June 13, 2019
Second Supplemental Note Indenture		March 10, 2021
Third Supplemental Note Indenture		February 22, 2022

* The Assumption Agreement dated January 1, 2011, between the Partnership, the Corporation and the relevant noteholders relates to the September 4, 2007 Note Purchase Agreement, September 8, 2010 Note Purchase Agreement, and November 5, 2010 Uncommitted Private Shelf Facility.

ADDITIONAL INFORMATION

Additional information in relation to Keyera may be found on the Corporation's SEDAR profile at www.sedar.com. Additional information including directors' and officers' remuneration and indebtedness, principal holders of securities and securities authorized for issuance under equity compensation plans (all where applicable) is contained in the Corporation's information circular dated March 24, 2022 filed on SEDAR at www.sedar.com. Information for 2022 will be included in the Corporation's information circular to be mailed to Shareholders (and filed on SEDAR) in connection with the annual meeting of Shareholders to be held on May 9, 2023. Additional financial information is provided in the 2022 Financial Statements and accompanying management's discussion and analysis filed on the Corporation's SEDAR profile at www.sedar.com.

SCHEDULE A

AUDIT COMMITTEE TERMS OF REFERENCE

Purpose

The purpose of the Audit Committee of the Board of Directors (the “**Committee**”) is to assist the Board of Directors (the “Board”) of Keyera Corp. in fulfilling its responsibilities in relation to financial matters. The Committee’s role includes monitoring and overseeing the quality of the financial reporting and systems of internal control and the financial risk management of Keyera Corp. and its subsidiaries, including Keyera Partnership (collectively Keyera Corp. and its subsidiaries being referred to as “**Keyera**”). The Committee shall serve as the ultimate authority to which Keyera Corp.’s internal and external auditors are accountable.

Mandate

Management is responsible for preparing the interim and annual financial statements of Keyera and for maintaining systems of risk assessment, risk management and internal controls to provide reasonable assurance that assets are protected and that transactions are authorized, recorded, and reported properly. The Committee is responsible for reviewing and monitoring management’s actions and for overseeing the work of the external auditor.

1. Financial Performance and Reporting. The Committee has responsibility for monitoring and reviewing financial performance and reporting by Keyera. The Committee shall:
 - (a) receive quarterly reports from management with respect to the financial performance of Keyera;
 - (b) review with management and the external auditors the financial reporting of Keyera in connection with the annual audit and the preparation of financial statements, including, without limitation, the judgment of the external auditors as to the quality and appropriateness of the accounting principles as applied in that financial reporting;
 - (c) receive the report of the external auditors on the annual financial statements of Keyera;
 - (d) review with the external auditors, (i) the annual financial statements of Keyera; (ii) the audit of those financial statements; and (iii) the report of the external auditors thereon; in order to confirm that the external auditors are satisfied with the disclosure to them of appropriate information and the content of the financial statements;
 - (e) review with management and make recommendations to the Board of Directors relating to (i) the audited annual financial statements of Keyera, and (ii) Management’s Discussion and Analysis (“MD&A”) in respect of Keyera’s annual financial statements, and (iii) the accompanying report of the Chief Executive Officer and press release;
 - (f) receive the report of the external auditors on Keyera’s interim financial statements;
 - (g) review with management and the external auditors (i) Keyera’s interim financial statements, (ii) the review of those financial statements, and (iii) the auditor’s report on their review and review with management the MD&A in relation thereto (along with the accompanying report of the Chief Executive Officer and press release) and make recommendations to the Board relating to the interim financial statements, MD&A and related documents;
 - (h) review and make recommendations to the Board with respect to Keyera’s Annual Information Form and those aspects of Information Circular related to the Committee (including with respect to the appointment of auditors);

- (i) review and make recommendations to the Board of Directors relating to any prospectus required to be filed in connection with an offering of securities by Keyera;
 - (j) receive a report from the general counsel each quarter and review with management, and, if necessary, the external auditors and legal counsel, any litigation, claim or contingency, including tax assessments (collectively "Claims"), that could have a material effect upon the financial position of Keyera and the manner in which such Claims may be, or have been, disclosed in the financial statements;
 - (k) review with management accounting practices, policies, significant estimates and instances of management override of controls and the financial impact thereof; and
 - (l) review accounting, tax and financial aspects of the operations of Keyera as the Committee considers appropriate.
2. Financing Strategy and Oversight. The Committee has responsibility for overseeing Keyera's financing strategy. The Committee shall:
- (a) review with management Keyera's dividend policy, dividend recommendations, financial structure, proposed financings and overall financing strategy.
3. Relationship with the External Auditors. The Committee has responsibility for the relationship with the external auditors relating to audit, review and attest services. The Committee shall:
- (a) subject to applicable law and the rights of shareholders and the Board, be directly responsible, for the appointment, compensation, and retention of the external auditors and oversight of their work relating to their audit (including resolution of disagreements between management and the external auditors regarding financial reporting), their preparation or issuance of an audit report, or their performance of other audit, review or attest services for Keyera;
 - (b) be responsible for requiring the external auditors to report directly to the Committee;
 - (c) review and approve the audit plans of the external auditors of Keyera;
 - (d) meet separately with the external auditors to discuss matters of mutual interest, and to consider any matter that the external auditors recommend that the Committee bring to the attention of the full Board;
 - (e) pre-approve significant non-audit engagements, including audit-related activities and other services, of the external auditors and review the fees paid and other terms for these engagements;
 - (f) review and discuss with the external auditors all significant relationships that the external auditors and their affiliates have with Keyera in order to determine the external auditors' independence, including, without limitation, (A) requesting, receiving and reviewing, on a periodic basis, a statement from the external auditors delineating all relationships that may reasonably be thought to bear on the independence of the external auditors with respect to Keyera, (B) discussing with the external auditors any disclosed relationships or services that the external auditors believe may affect the objectivity and independence of the external auditors, and (C) recommending that the Board take appropriate action in response to the external auditors' report to satisfy itself of the external auditors' independence;

- (g) periodically consider whether external auditors should be precluded from providing non-audit services to Keyera;
 - (h) assess the effectiveness and performance of the external auditors; and
 - (i) determine whether restrictions should be placed on the recruitment by Keyera of employees and management from the external auditors.
4. Internal Audit and Controls. The Committee has an oversight responsibility for the design, maintenance and assessment of internal controls and the internal audit function by Keyera's management. The Committee shall:
- (a) oversee the internal audit function;
 - (b) review and consider, as appropriate, any significant reports and recommendations issued by Keyera or any external party relating to internal audit issues, together with management's response thereto;
 - (c) receive a report each quarter on management overrides of internal controls and review with management and the external auditors any issues arising from overrides;
 - (d) review with management, and the external auditors, the effectiveness of the disclosure controls and internal controls of Keyera, and review whether those controls are in compliance with legal and regulatory requirements and with the policies of Keyera;
 - (e) establish procedures for the receipt, retention and treatment of complaints received by Keyera regarding accounting, internal controls or auditing matters, including the confidential, anonymous submission by employees of Keyera of concerns regarding illegal activity or questionable accounting or auditing matters;
 - (f) review with management, prior to consideration by the Board, the proposed appointment, re-assignment or removal of the Chief Financial Officer of Keyera Corp.;
 - (g) review the adequacy of internal controls and procedures related to the expense accounts of officers of Keyera at the level of Vice-President and above, including officers' use of corporate assets, and consider the results of any reviews by the external auditors; and
 - (h) review the financial aspects of any transactions of Keyera that involve related parties (other than wholly-owned subsidiaries).
5. Risk Management. The Committee has a responsibility for monitoring and reviewing financial risk assessment and management programs. The Committee shall:
- (a) review with management the identification, assessment and management of significant financial risks and exposures;
 - (b) review the processes implemented or proposed by management to identify material financial risks associated with Keyera's businesses, and review management's implementation of appropriate processes and systems to manage and mitigate those risks;
 - (c) review the management of risks associated with Keyera's information technology systems, including the effectiveness of Keyera's cyber security practices; and
 - (d) review management's program to obtain appropriate insurance to mitigate risks and coverage, deductibles and key issues regarding corporate insurance policies.

Committee and Procedures

1. Composition of Committee.

The Committee shall consist of not less than three and not more than six Directors, at least one-half of whom are resident Canadians (as defined in the *Business Corporations Act* (Alberta)), all of whom are independent of Keyera within the meaning of applicable laws, rules, policies, guidelines and requirements, as affirmatively determined by the Board. In addition, all members of the Committee shall be financially literate as determined by the Board from time to time. Determinations as to whether a particular Director satisfies the requirements for membership on the Committee shall be made by the full Board.

2. Appointment of Committee Members

Members of the Committee shall be appointed from time to time and shall hold office at the pleasure of the Board. Where a vacancy occurs at any time in the membership of the Committee, it may be filled by the Board. The Board shall fill any vacancy if the membership of the Committee is less than three Directors.

3. Committee Chair

The Board shall appoint a Chair for the Committee.

4. Absence of Committee Chair

If the Chair of the Committee is not present at any meeting of the Committee, one of the other members of the Committee who is present at the meeting shall be chosen by the Committee to preside at the meeting.

5. Secretary of Committee

The Committee shall appoint a Secretary who need not be a Director of Keyera Corp.

6. Meetings

The Committee shall meet at least four times per year and shall meet at such other times during each year as it deems appropriate. In addition, the Chair of the Committee may call a special meeting of the Committee at any time. The Committee shall ensure that it meets the external auditors on a regular basis in the absence of management.

7. Quorum

A majority of the members of the Committee shall constitute a quorum.

8. Notice of Meetings

Notice of the time and place of every meeting shall be given in writing (including by way of written facsimile communication) to each member of the Committee at least 24 hours prior to the time fixed for such meeting, provided however, that a member may in any manner waive a notice of a meeting; and attendance of a member at a meeting constitutes a waiver of notice of the meeting, except where a member attends a meeting for the express purpose of objecting to the transaction of any business on the grounds that the meeting is not lawfully called.

9. Attendance at Meetings

At the invitation of the Chair of the Committee, one or more officers of Keyera may attend any meeting of the Committee. Any independent director may attend any meeting of the Committee.

10. Procedure, Records and Reporting

Subject to any statute or the articles and by-laws of Keyera Corp., the Committee shall fix its own procedures at meetings, keep records of its proceedings and report to the Board when the Committee may deem appropriate (but not later than the next quarterly meeting of the Board). The minutes of its meetings shall be distributed to all directors. All independent Directors shall be provided with access to any materials distributed to members of the Committee.

11. Assessment

The Audit Committee should assess from time to time its own performance, considering responsiveness to the Terms of Reference of the Audit Committee and the effectiveness of relationships and communications with management, the internal auditors, the external auditors and the Board of Directors.

12. Delegation

The Committee may delegate from time to time to any person or committee of persons any of the Committee's responsibilities that lawfully may be delegated.

13. Independent Advisors

The Committee has the authority to retain independent legal, compensation or other advisors to advise the Committee or a member of the Committee independently on any matter. The Committee (subject to the Board's oversight) has the authority to retain and terminate such advisors, including the authority to approve fees and other terms of the retainer.

14. Review of Terms of Reference

The Committee shall review and reassess the adequacy of these Terms of Reference at least annually, and otherwise as it deems appropriate, and recommend changes to the Board.
